

TASK: 1
Installing Windows server 2016 on VMware Workstation

Run VMware workstation

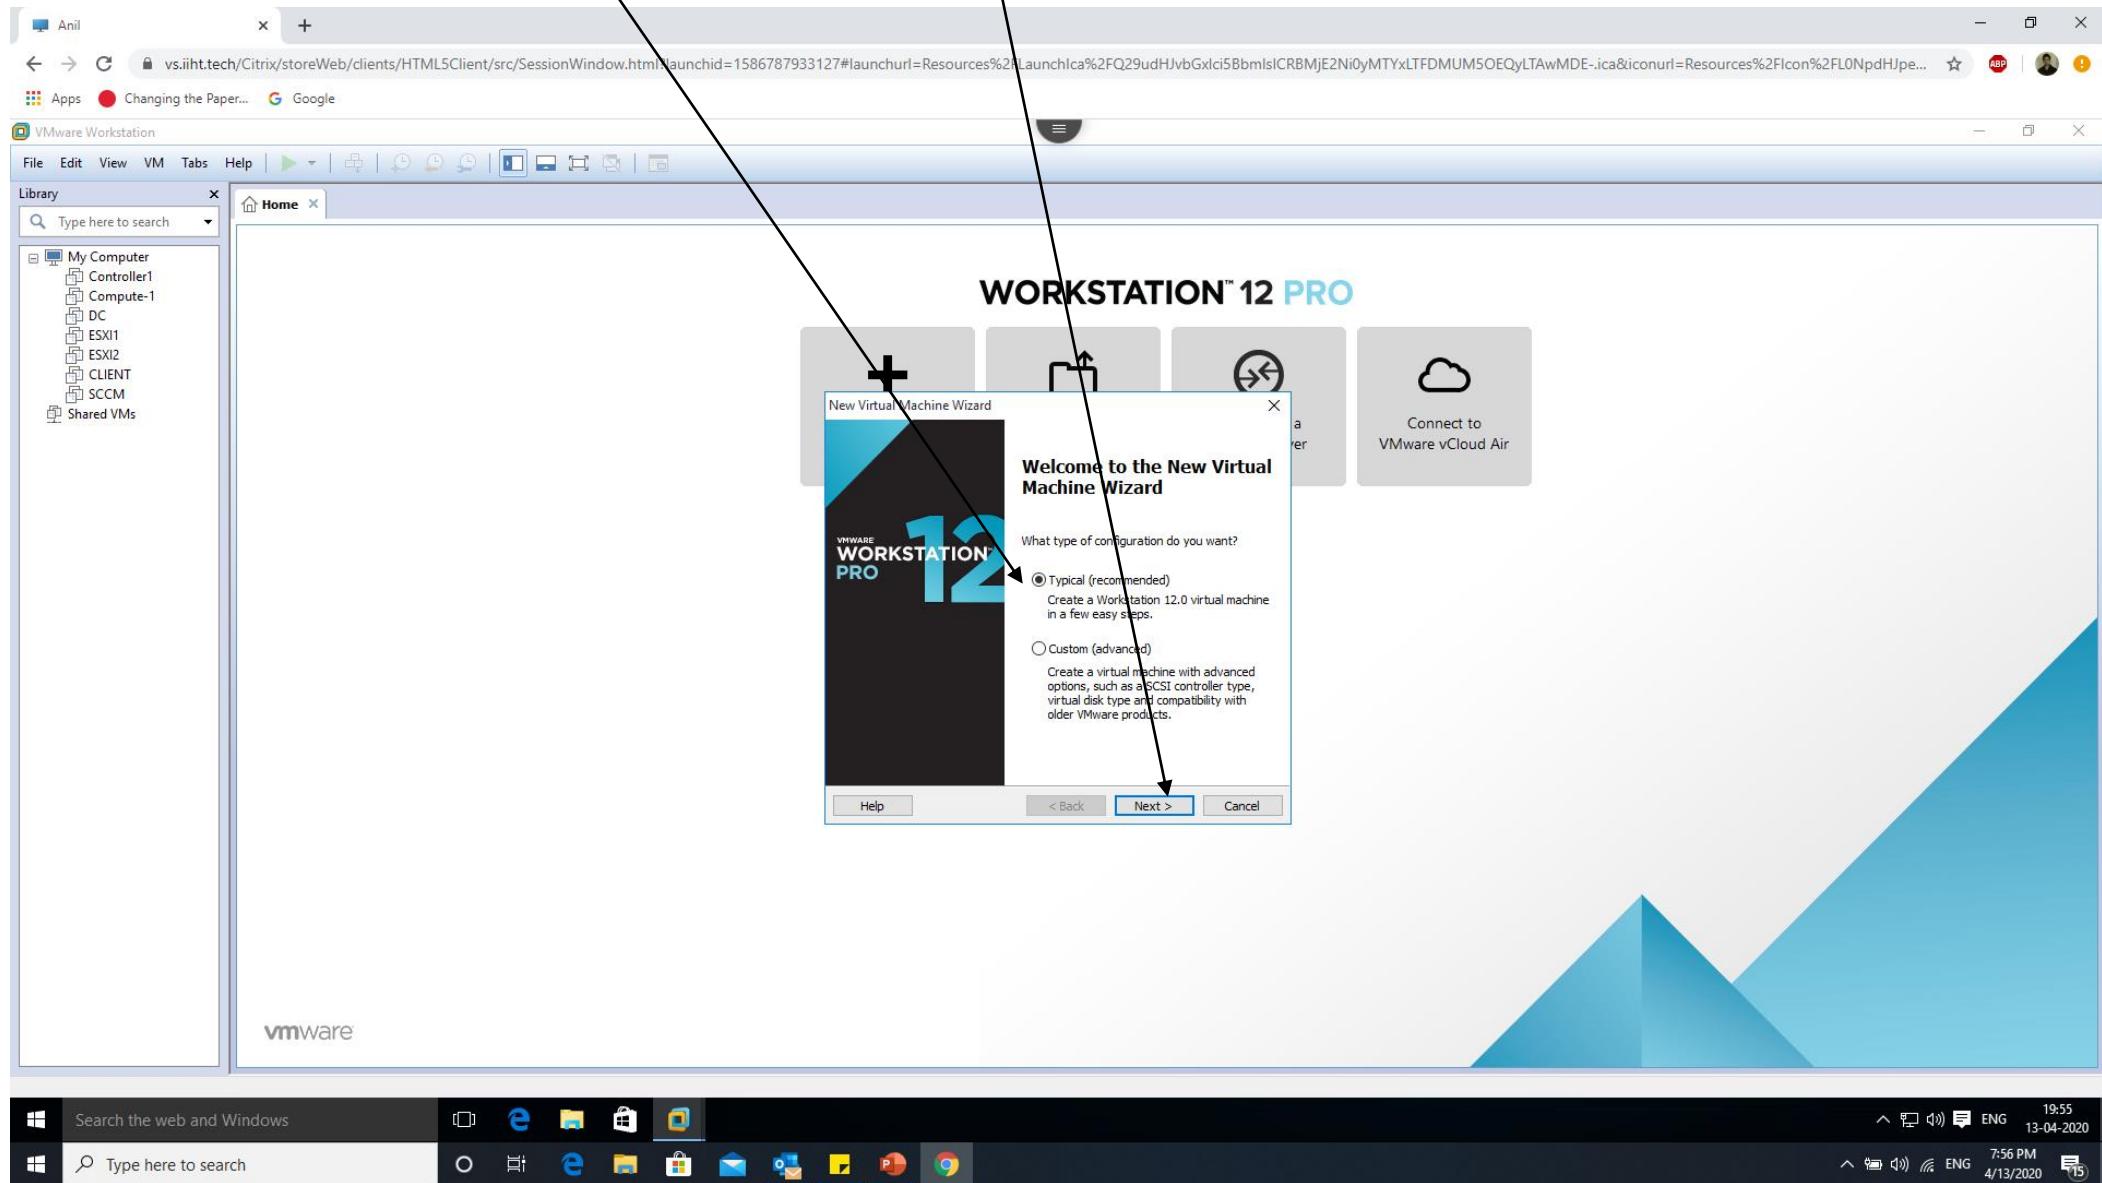

On home tab of VMware workstation click on create new virtual machine

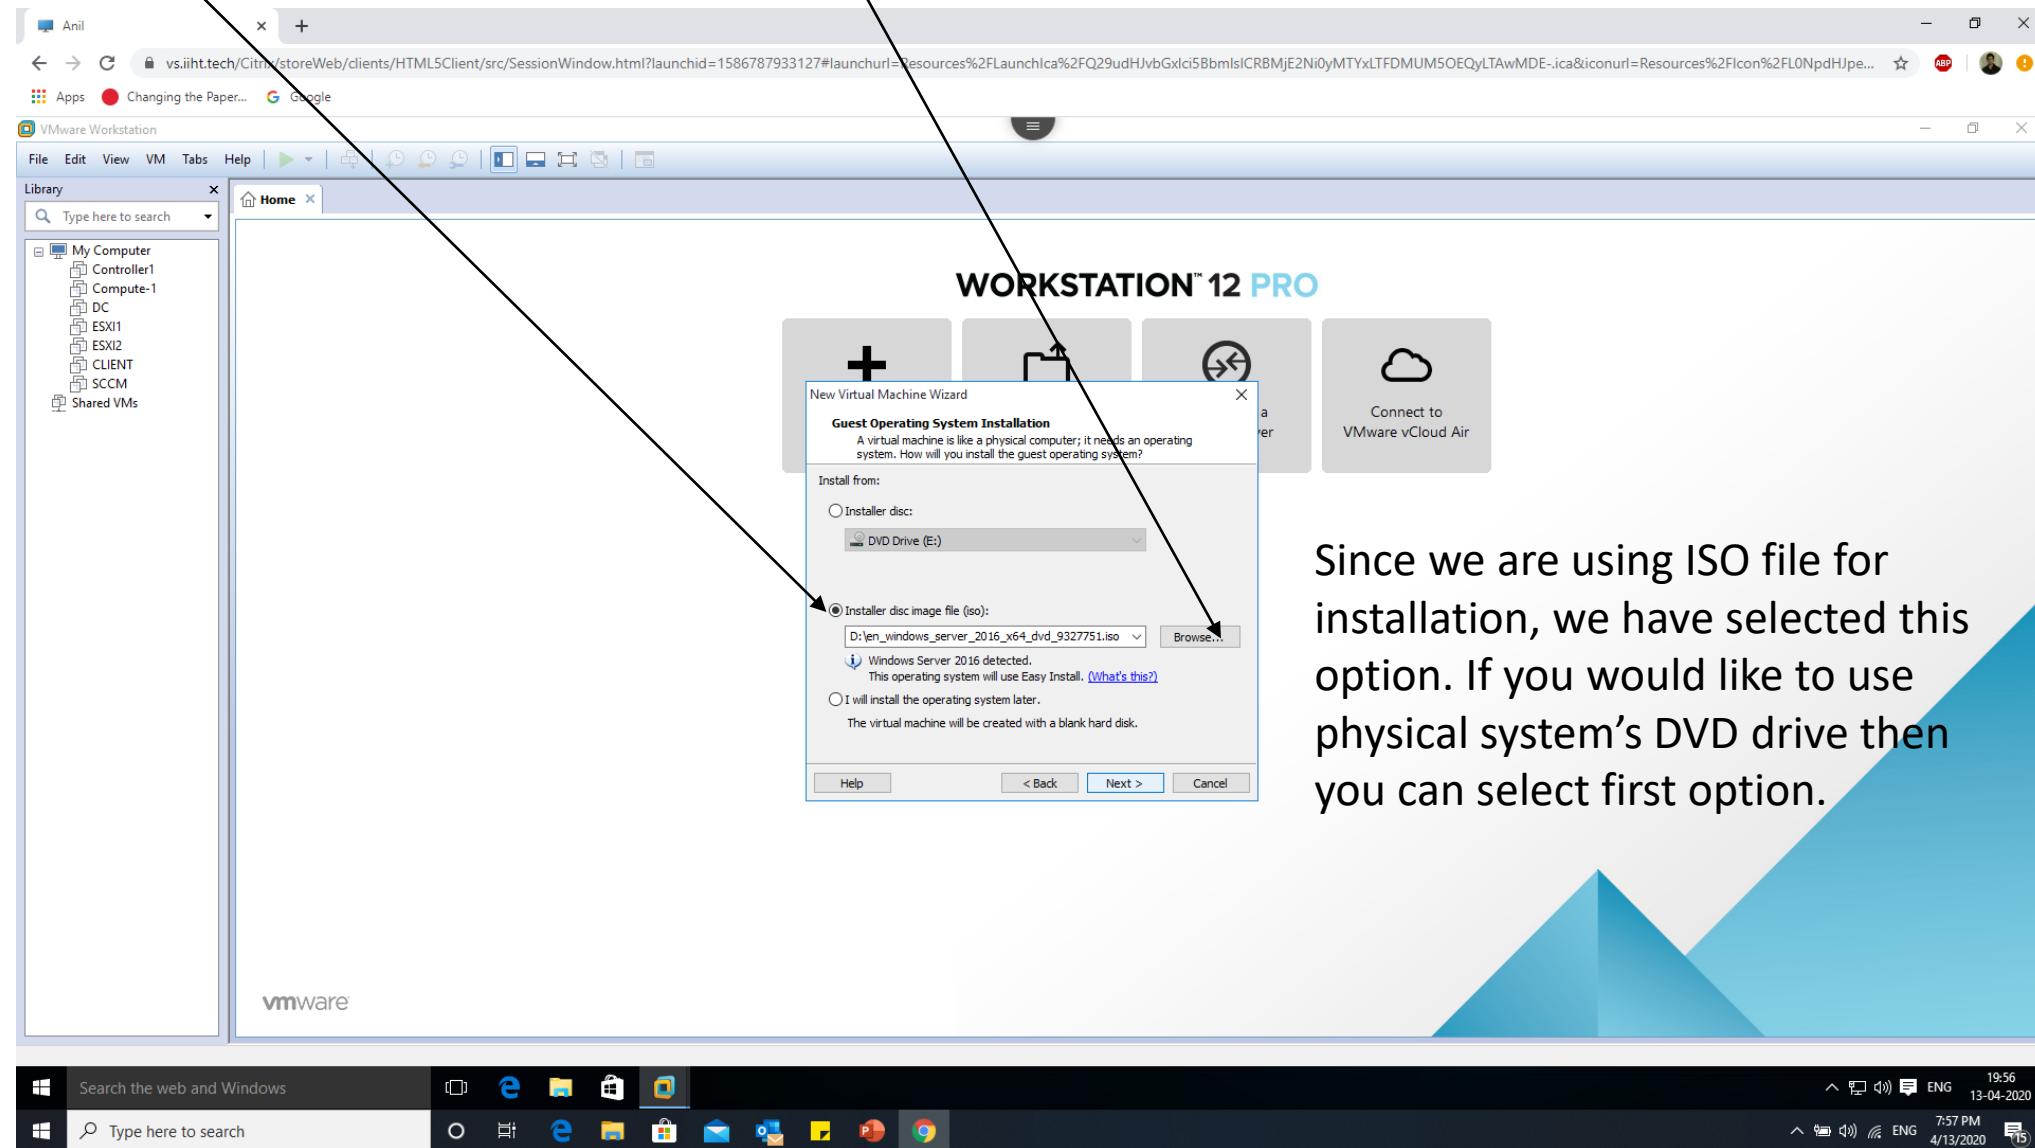

This option is used for creating a new VM. If you have an existing VM then that can be opened by clicking on Open a virtual machine.

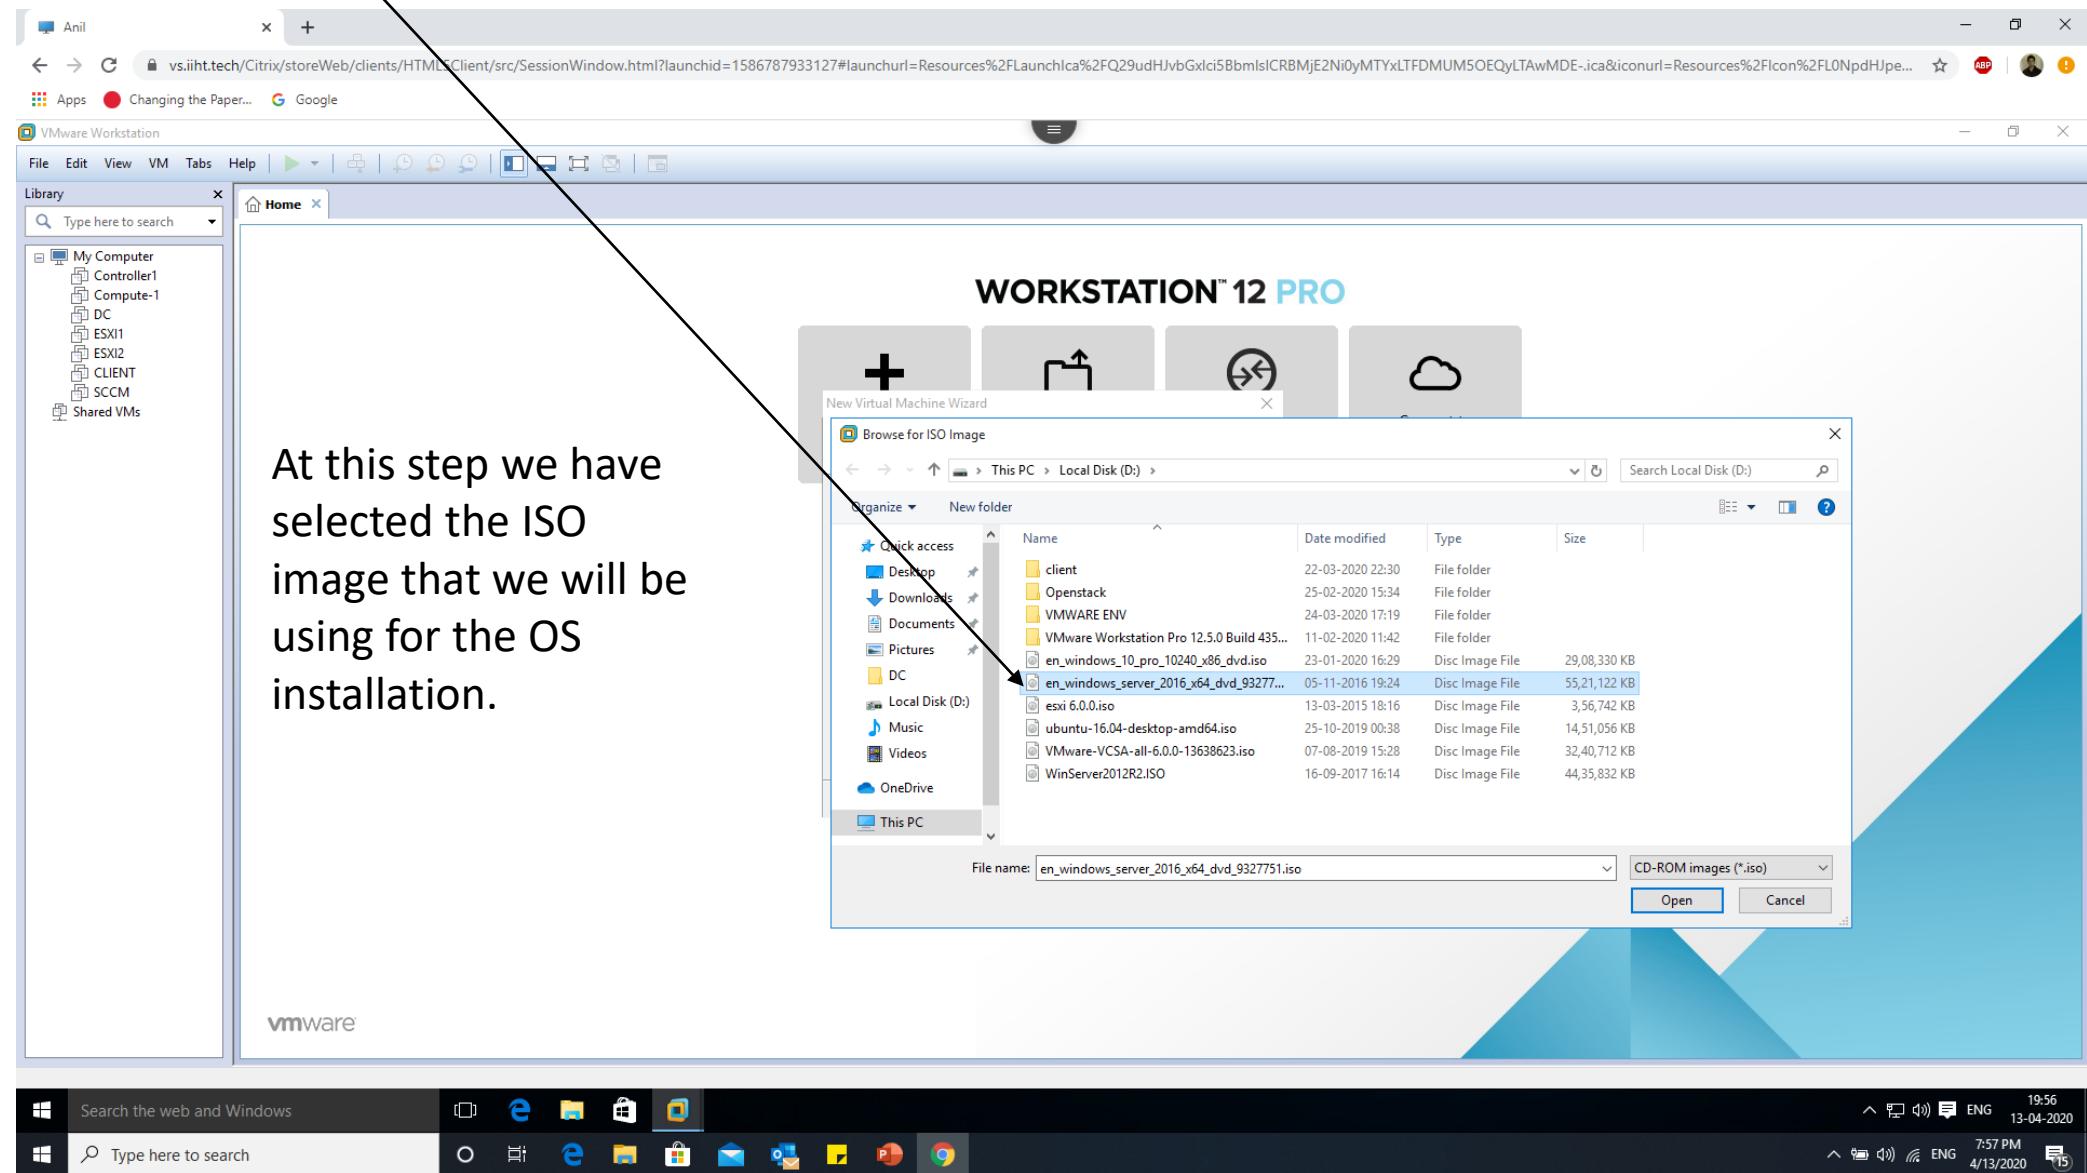

On welcome wizard , click on Typical and then click next

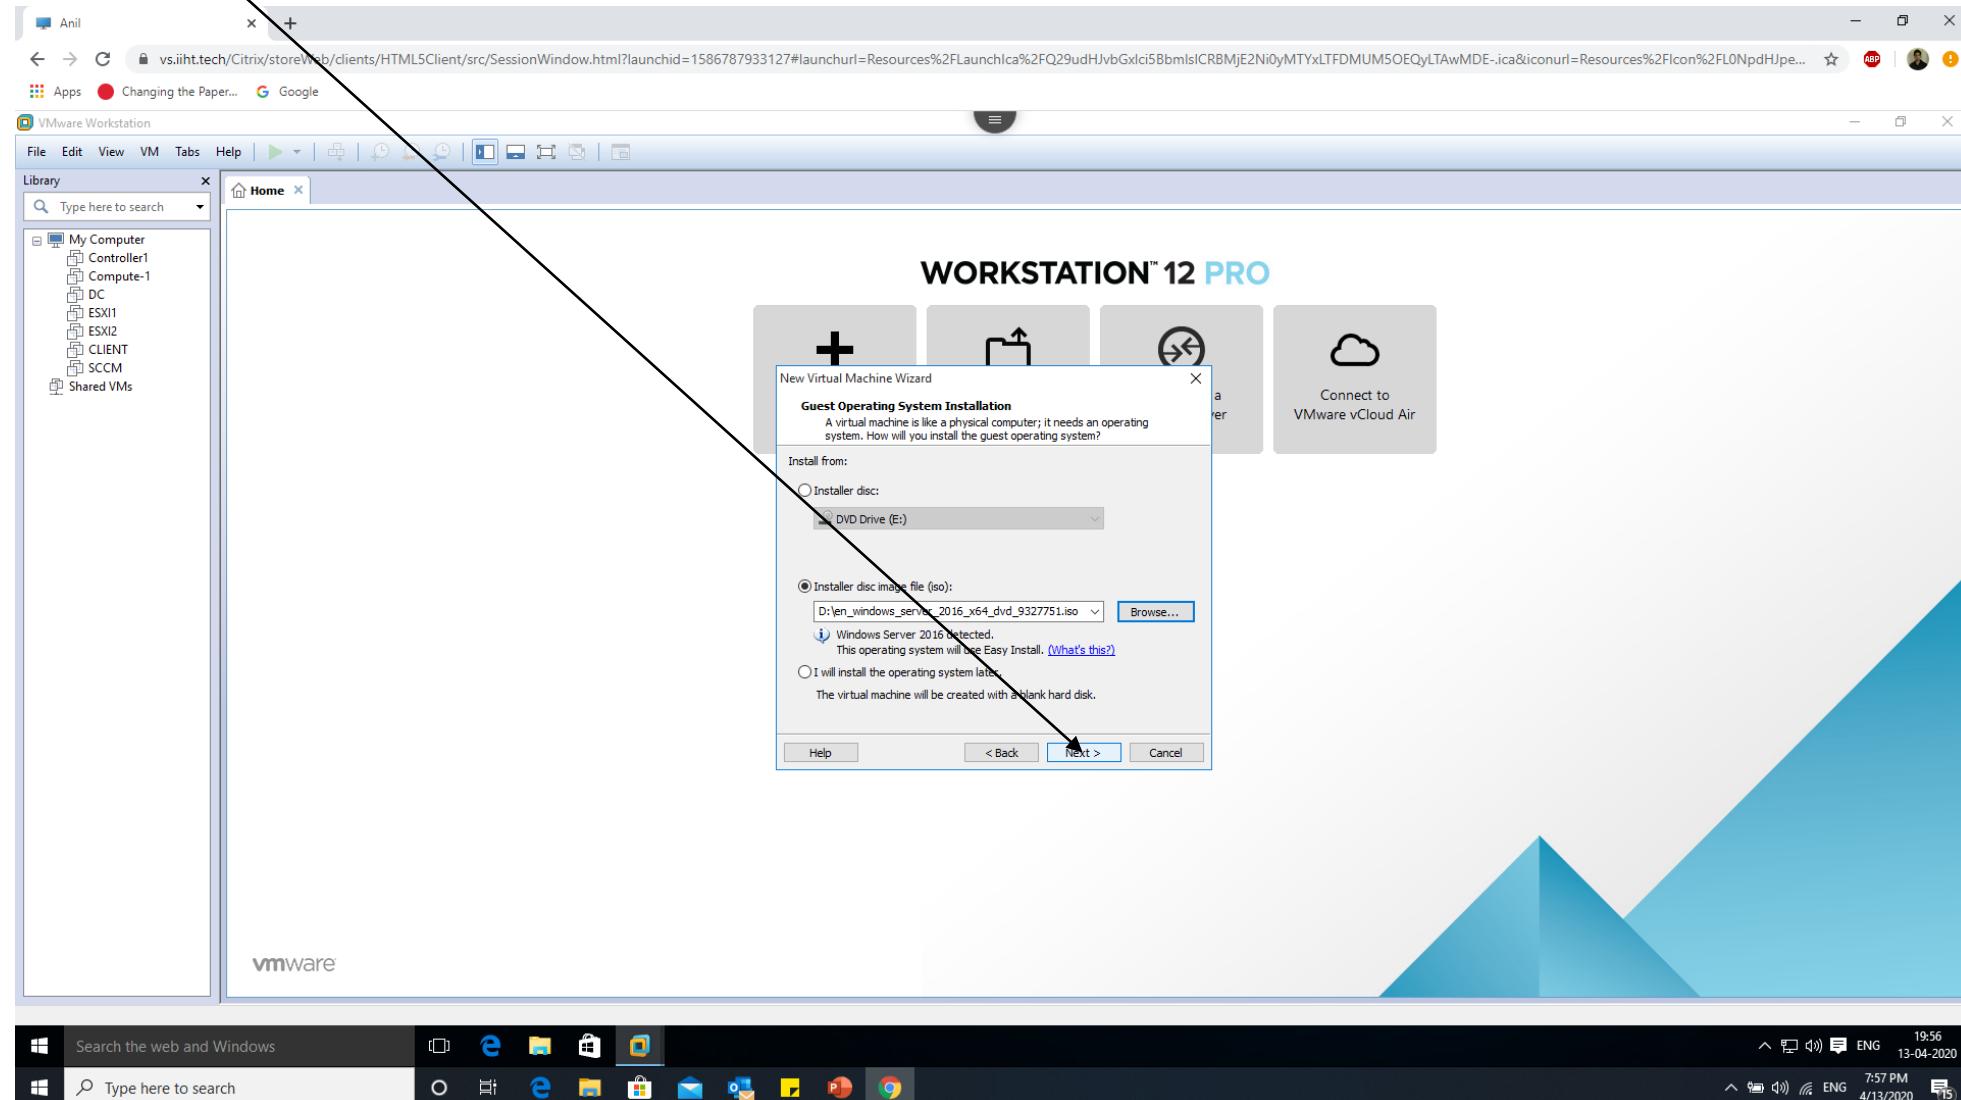

Select Installer disk image file (iso) and click on browse.

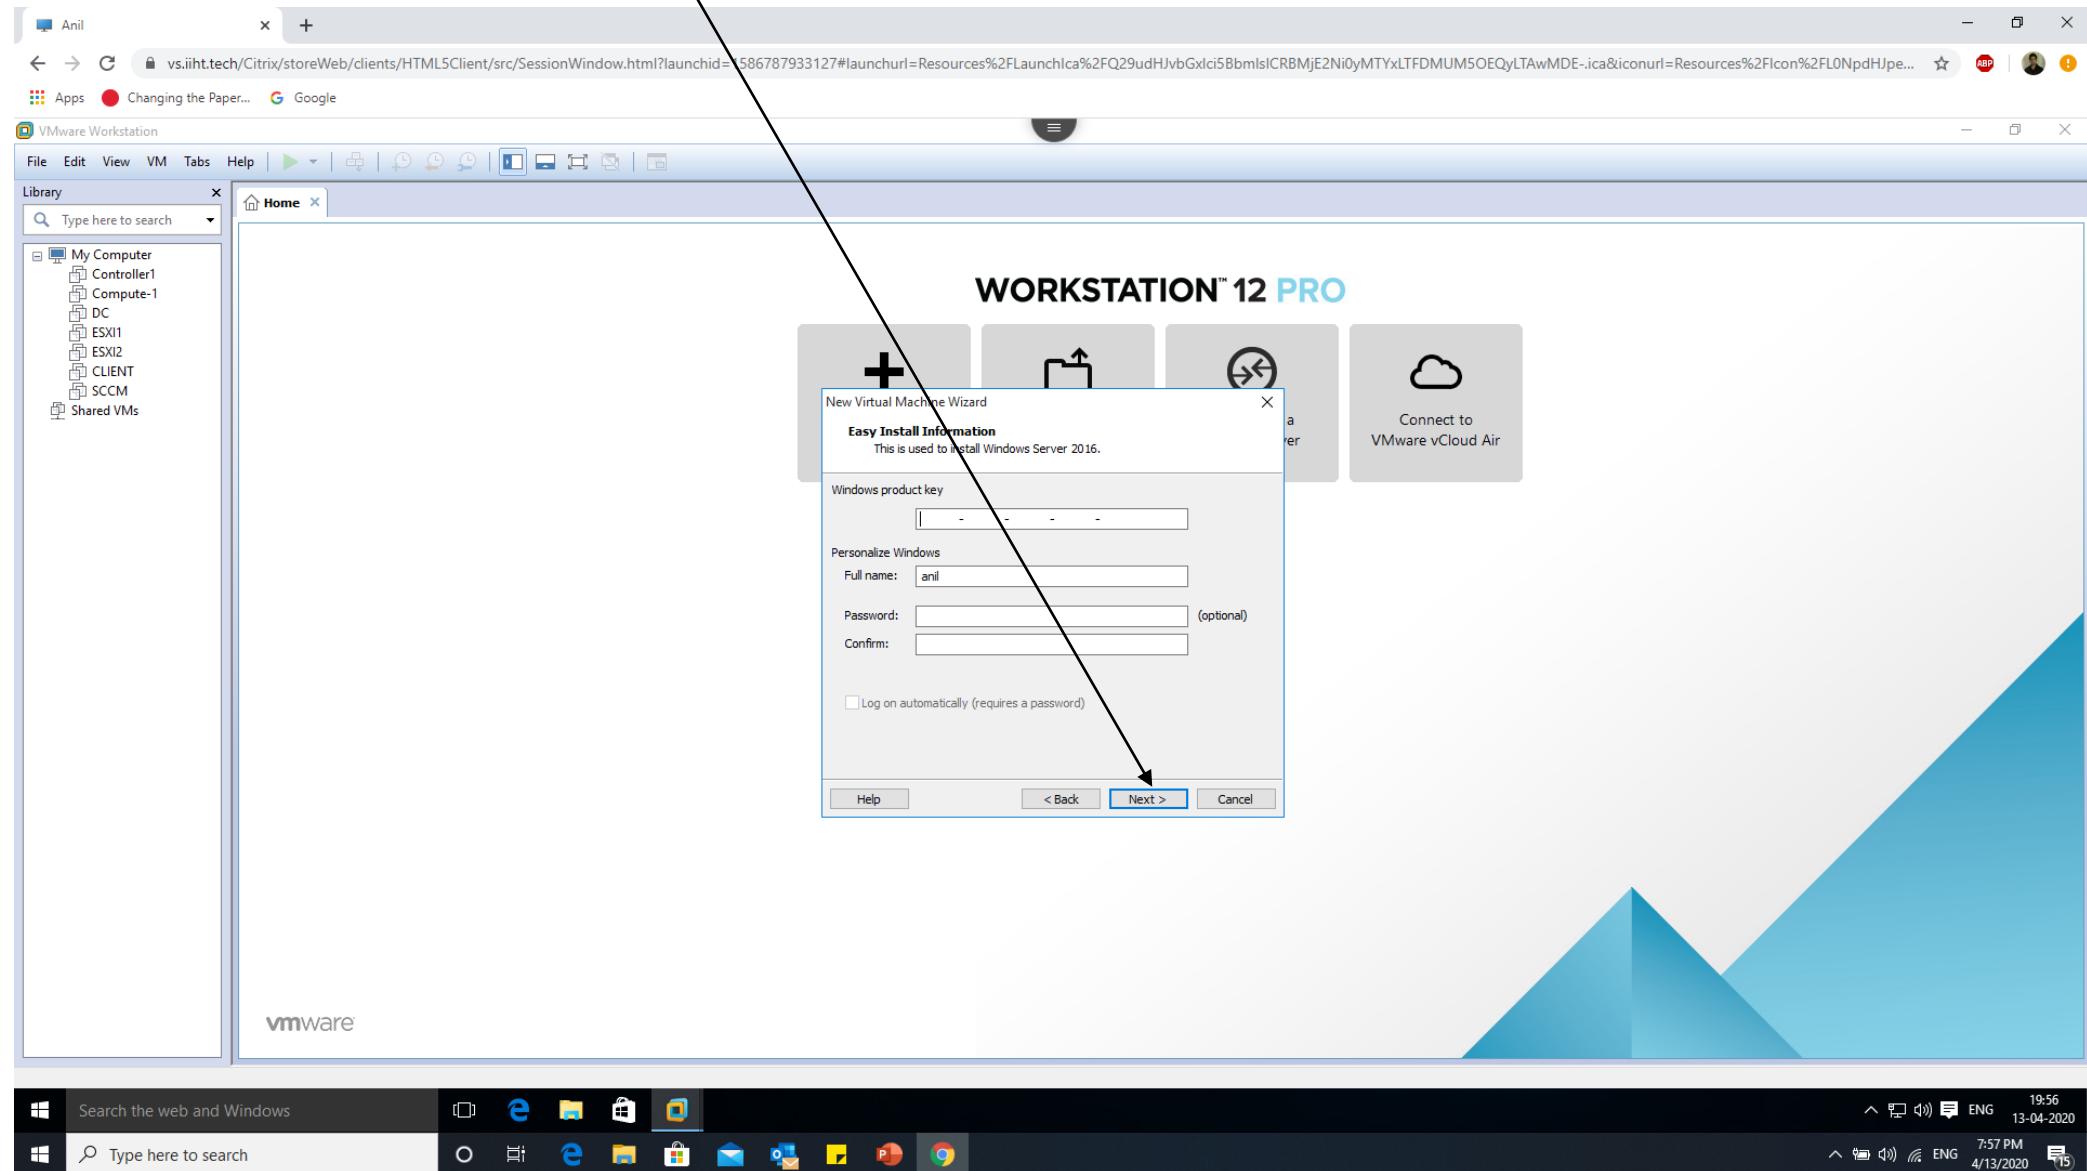

Browse for the server ISO file and click on open

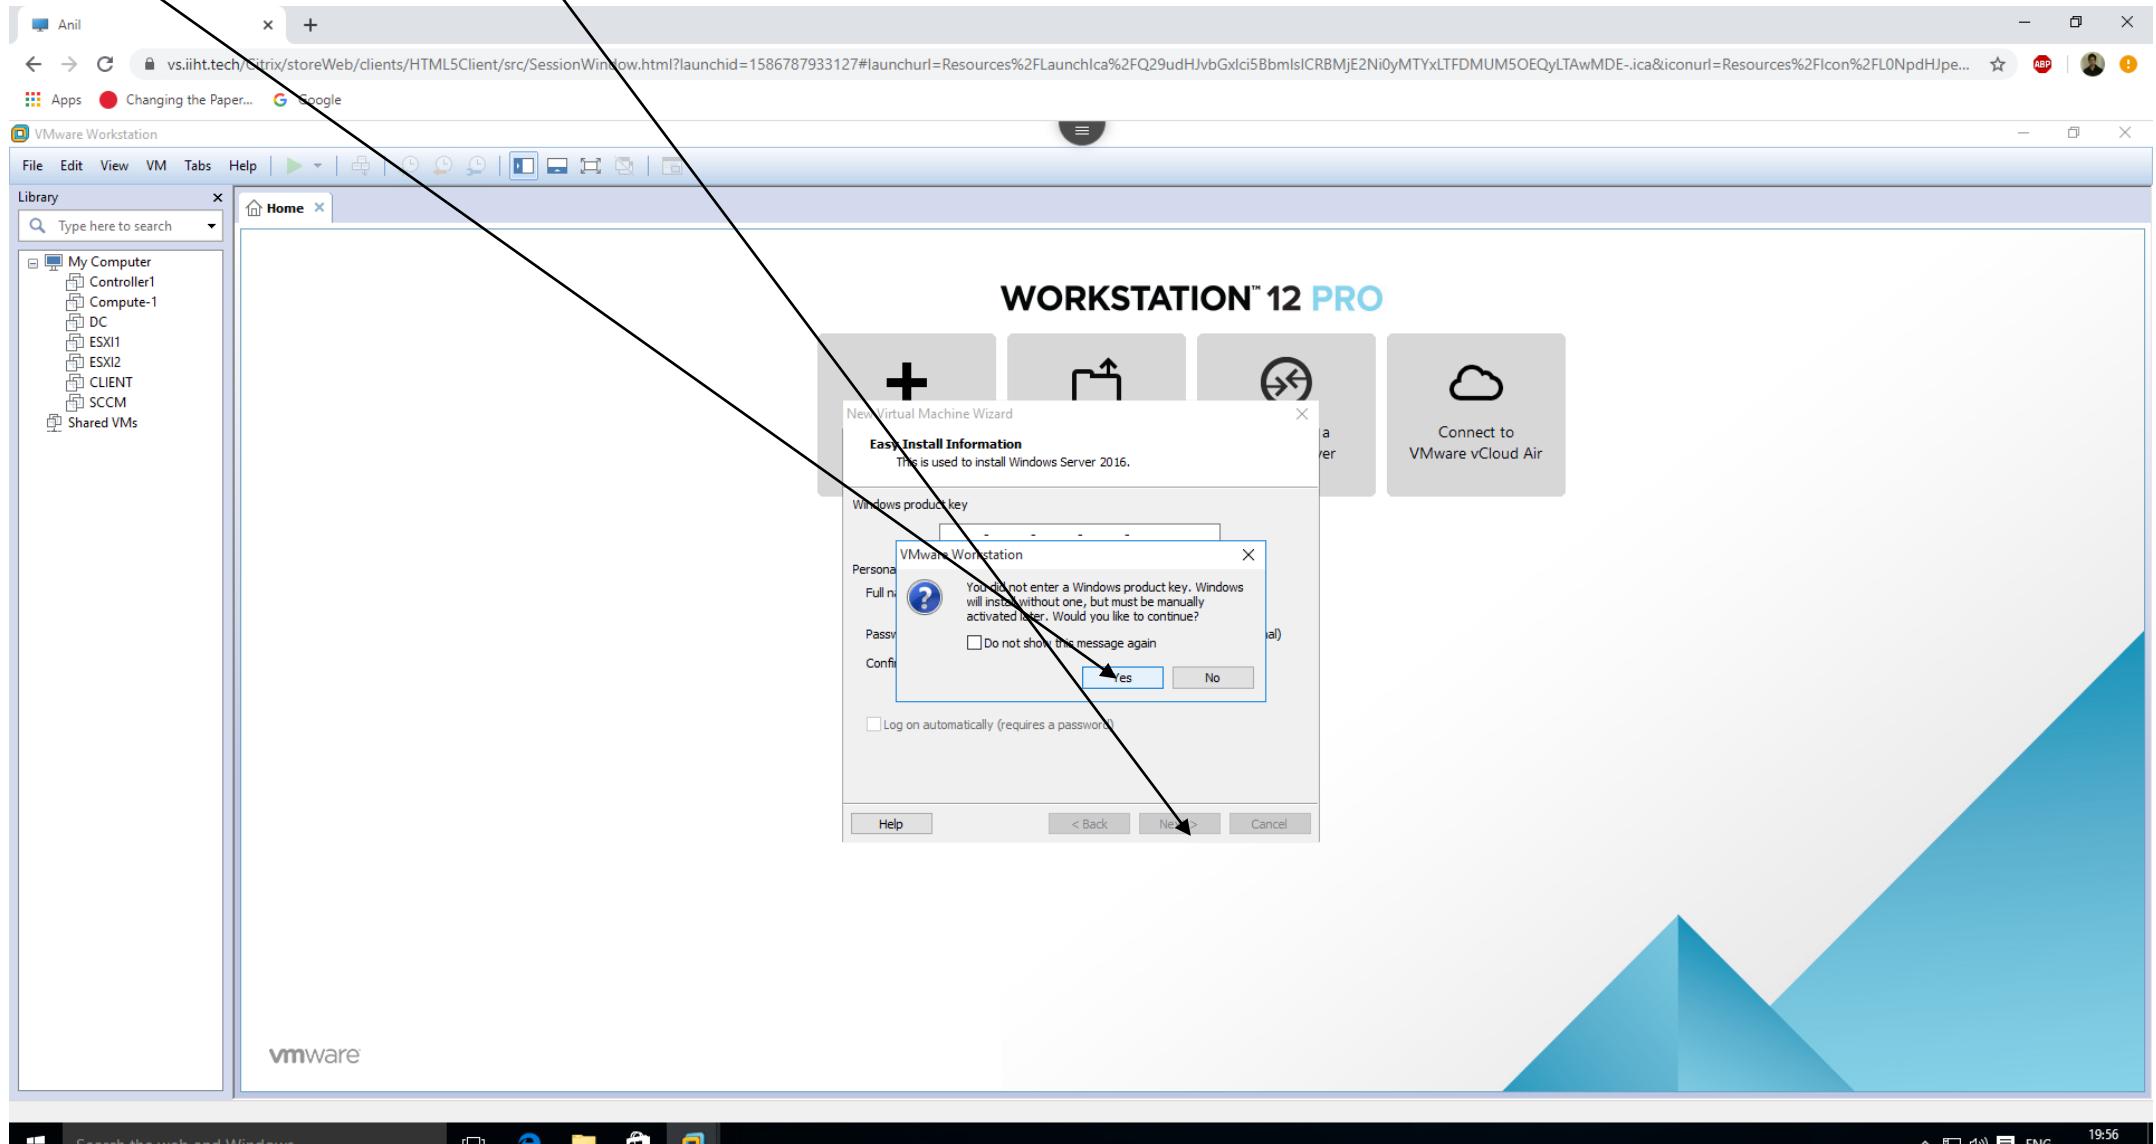

Click on Next

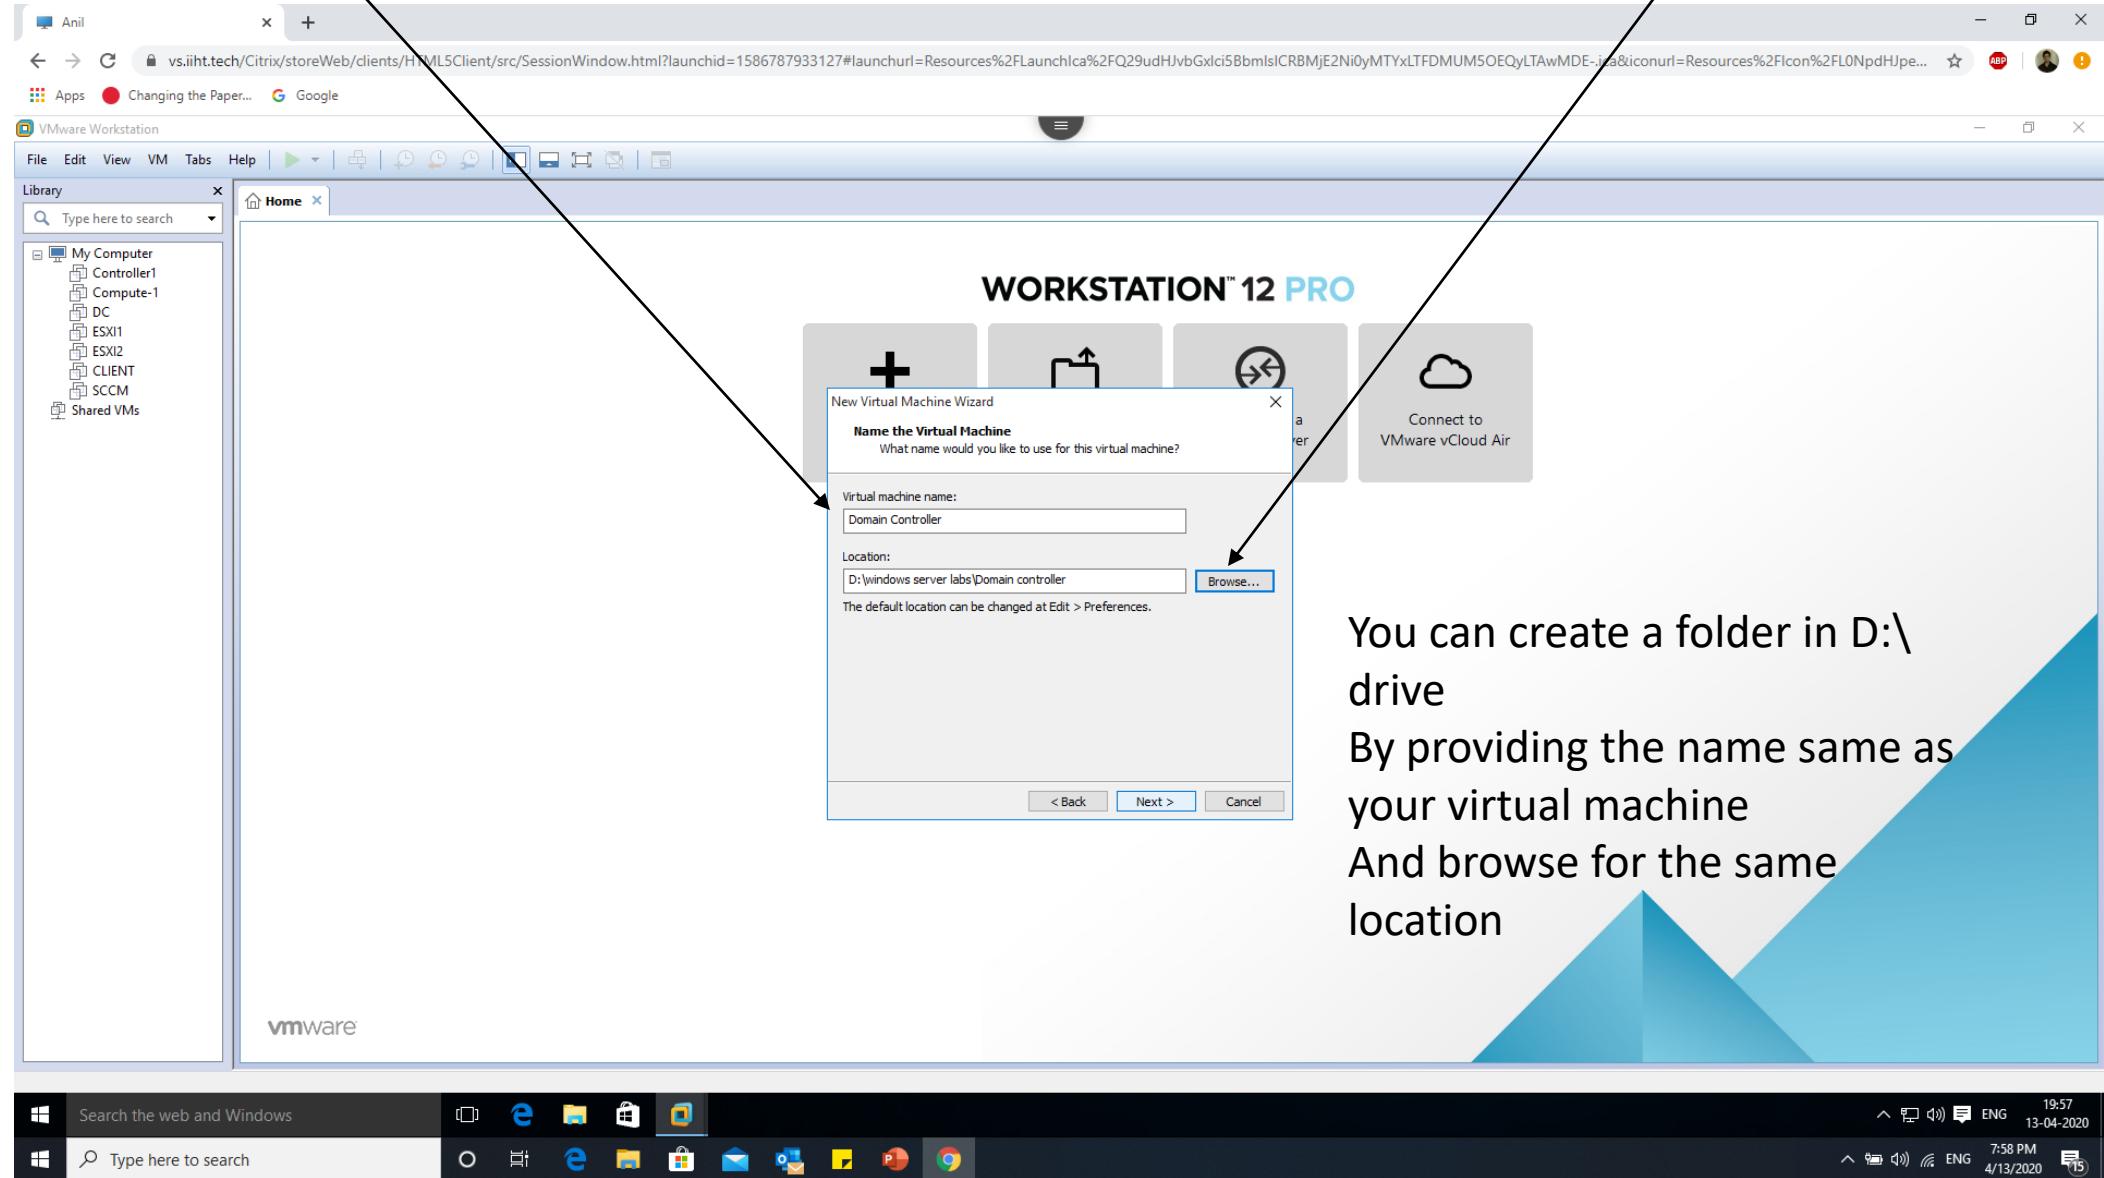

Do not change anything, simply click next

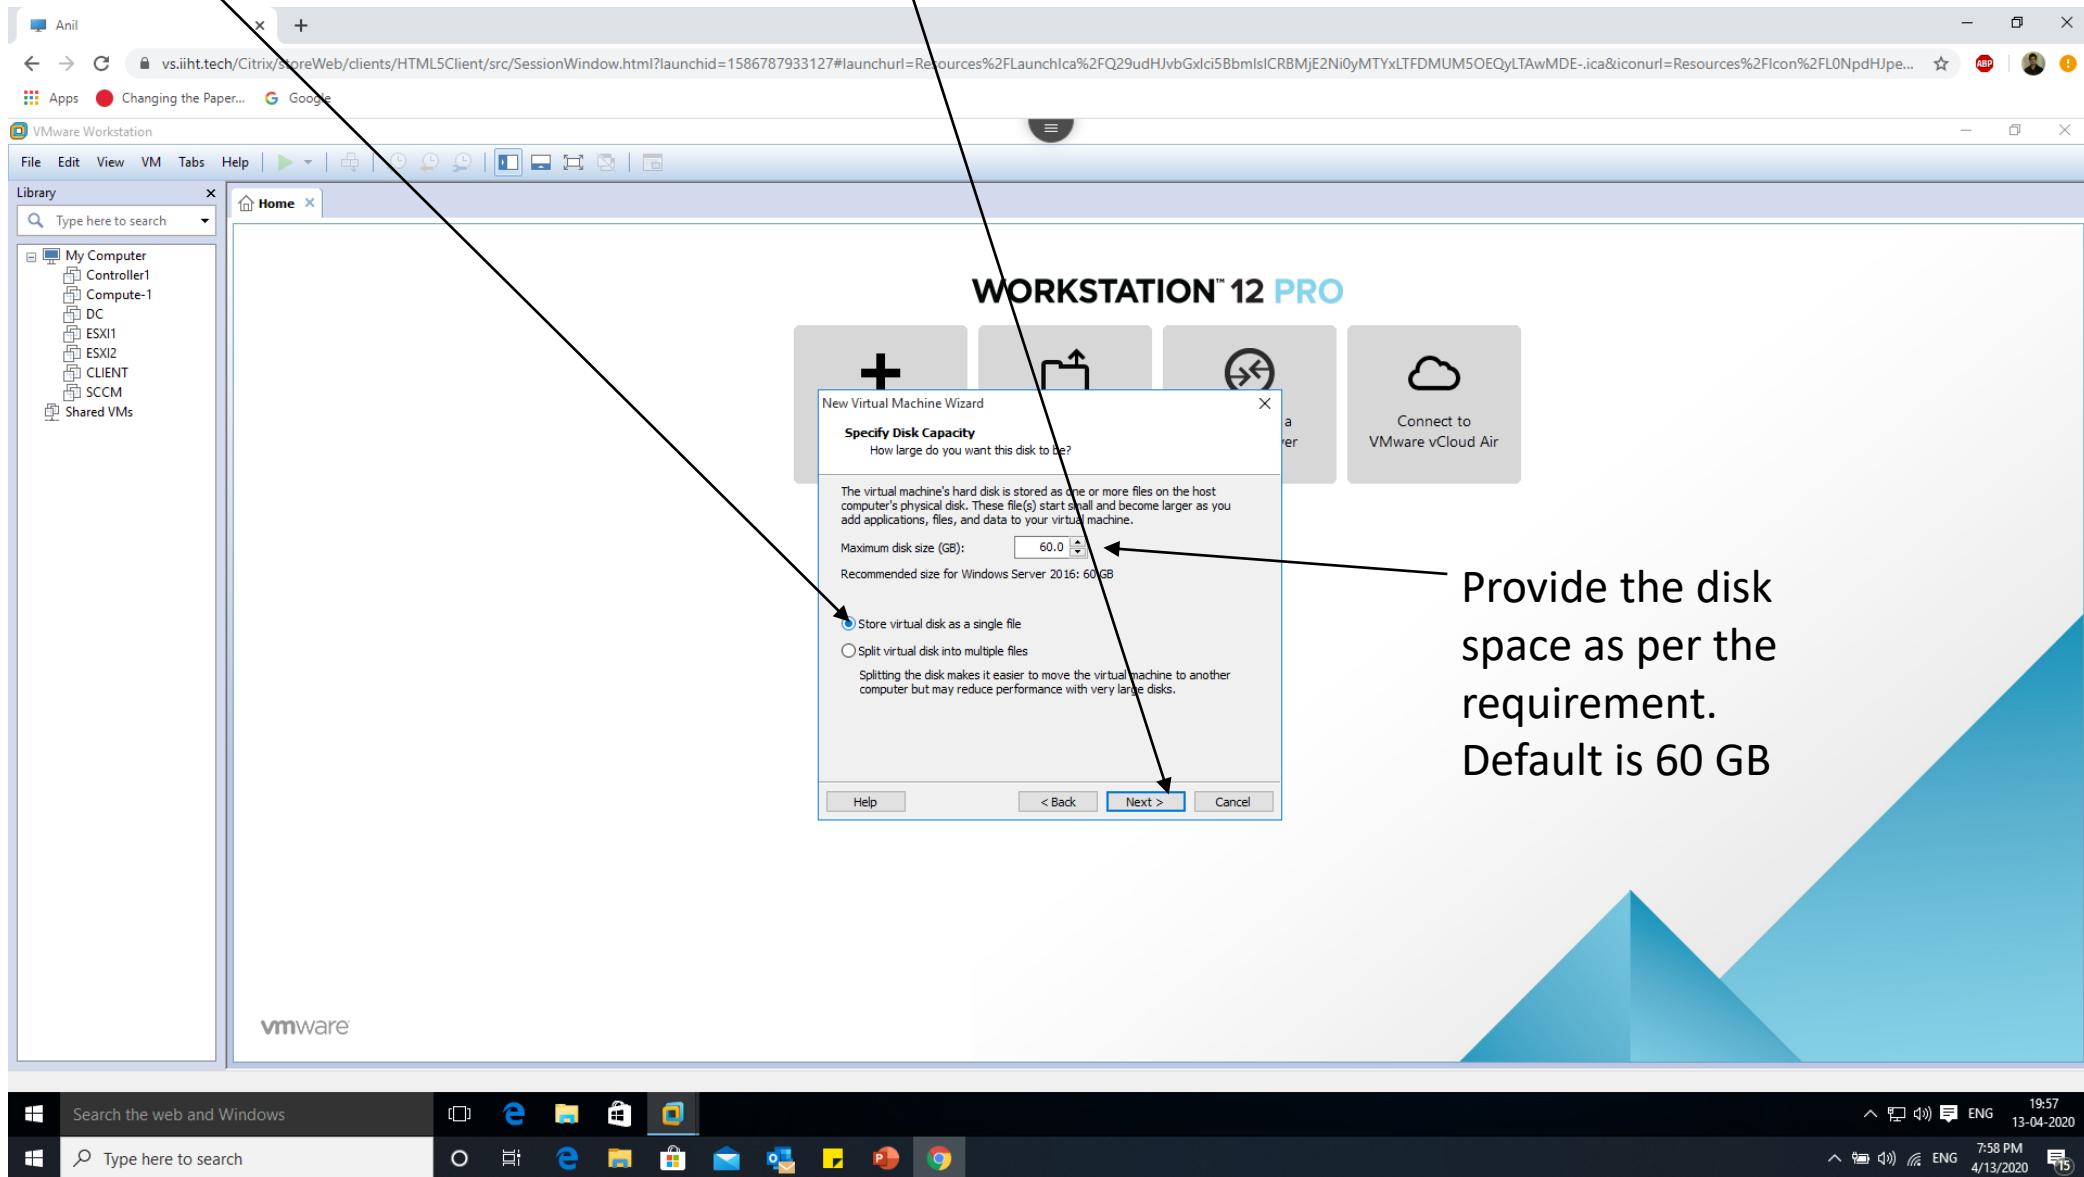

Click on yes and then click on next

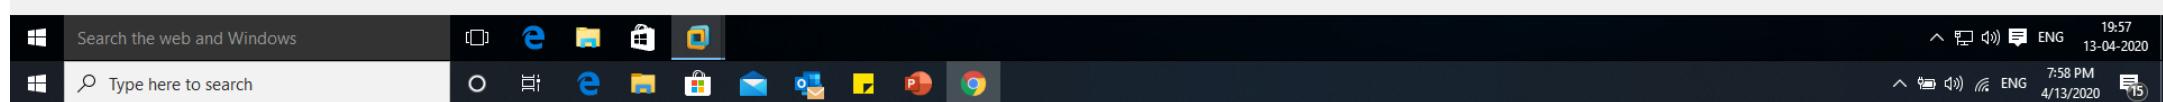

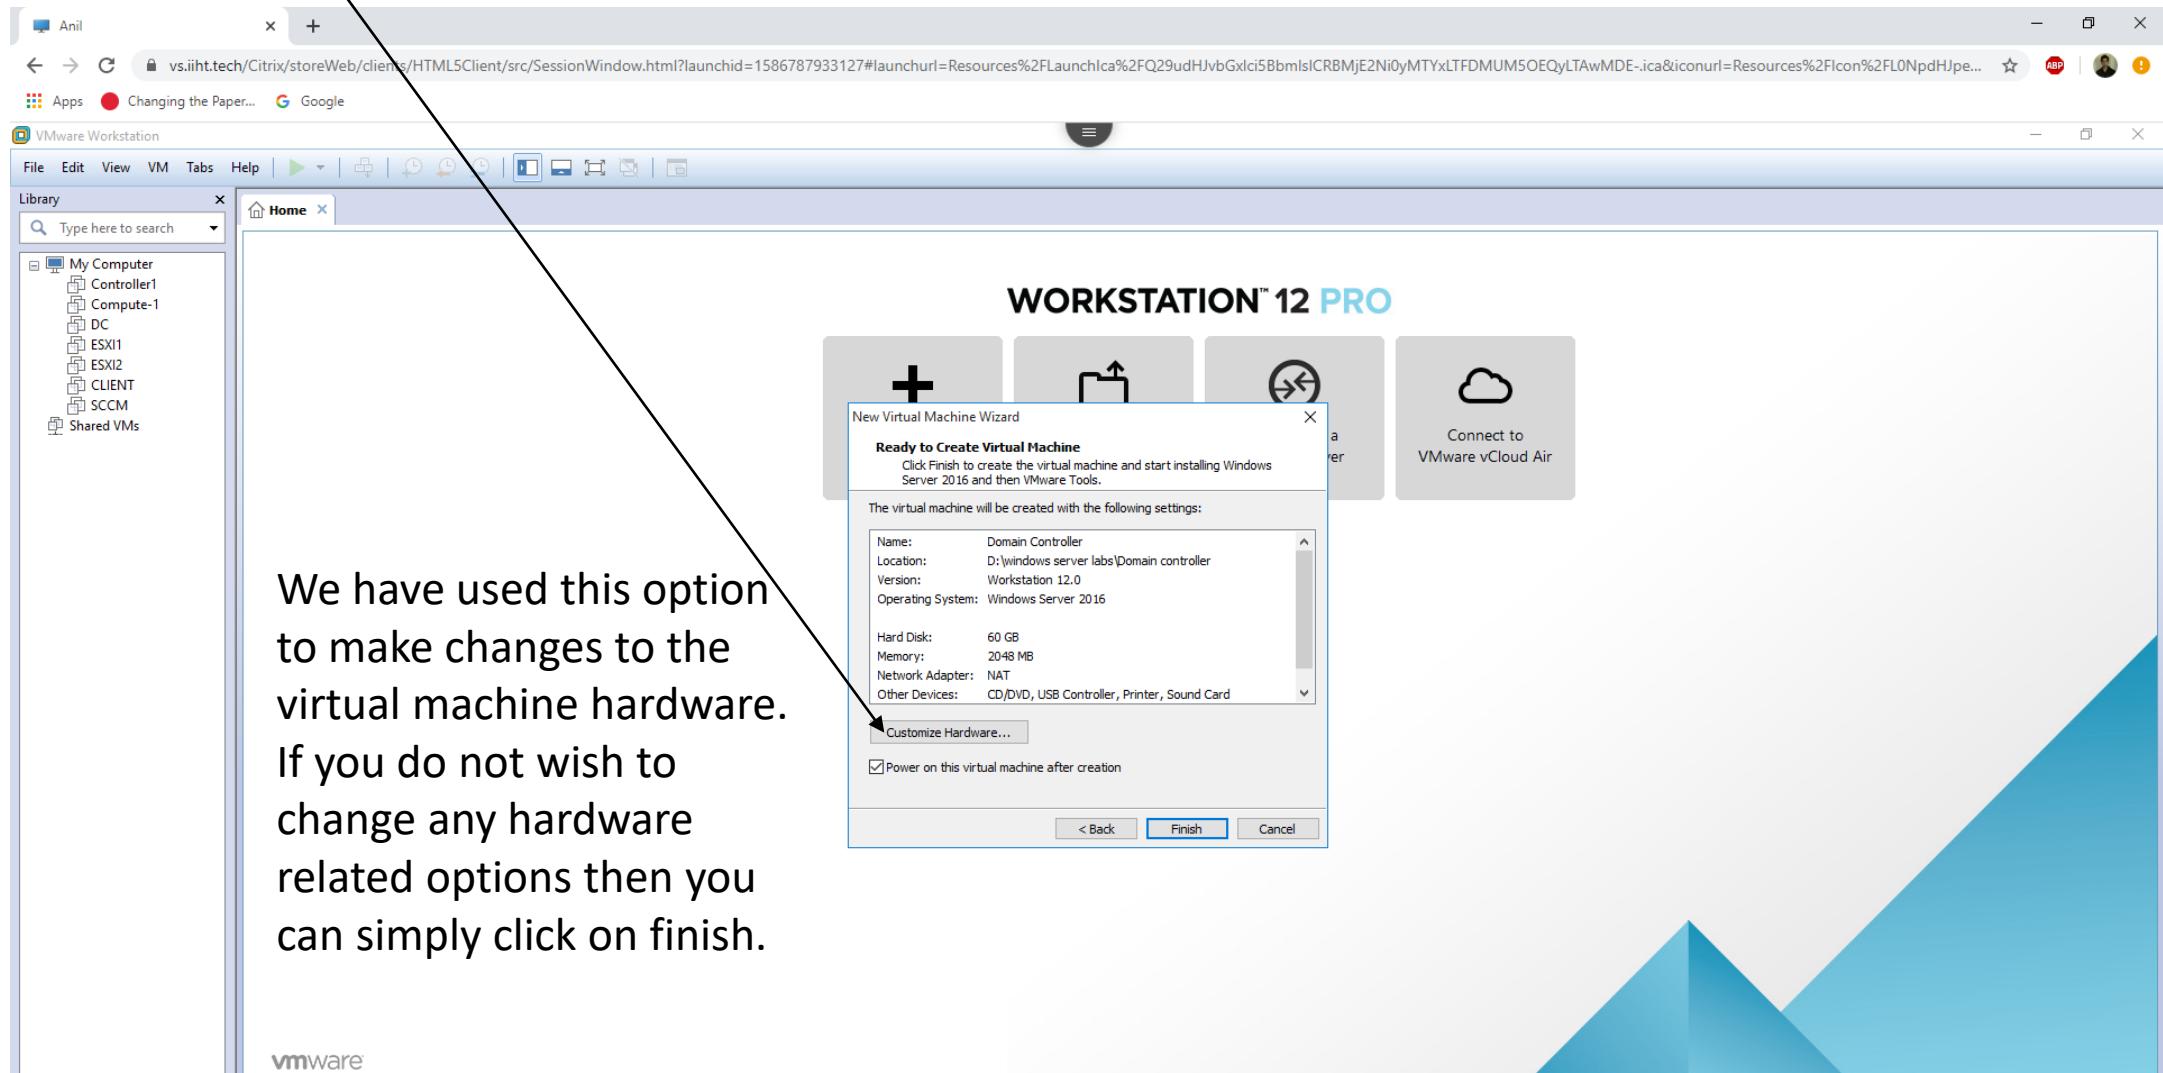

Provide the Virtual machine name as required (Eg: Domain controller) and click on browse to provide the location

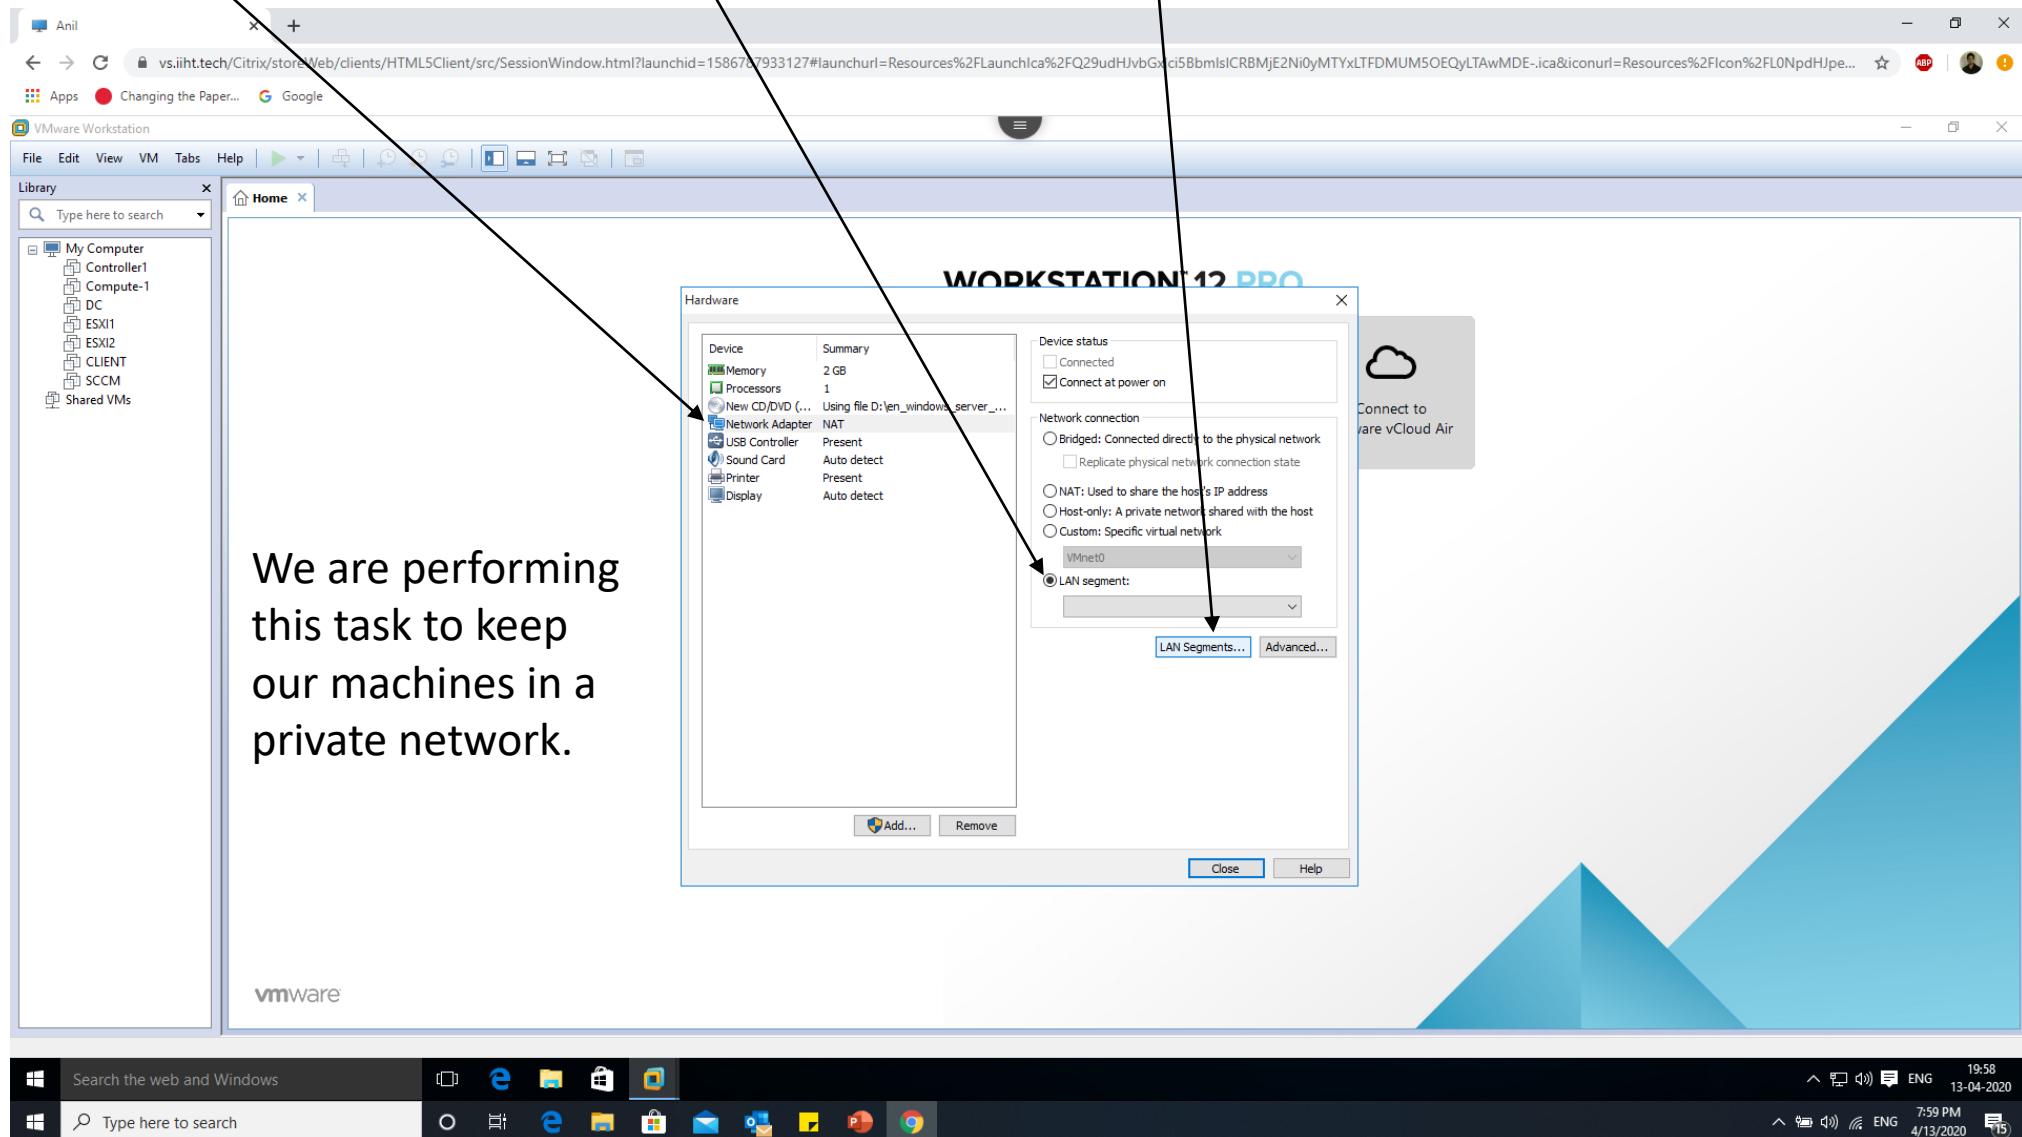

Select Store virtual disk as single file and click on next

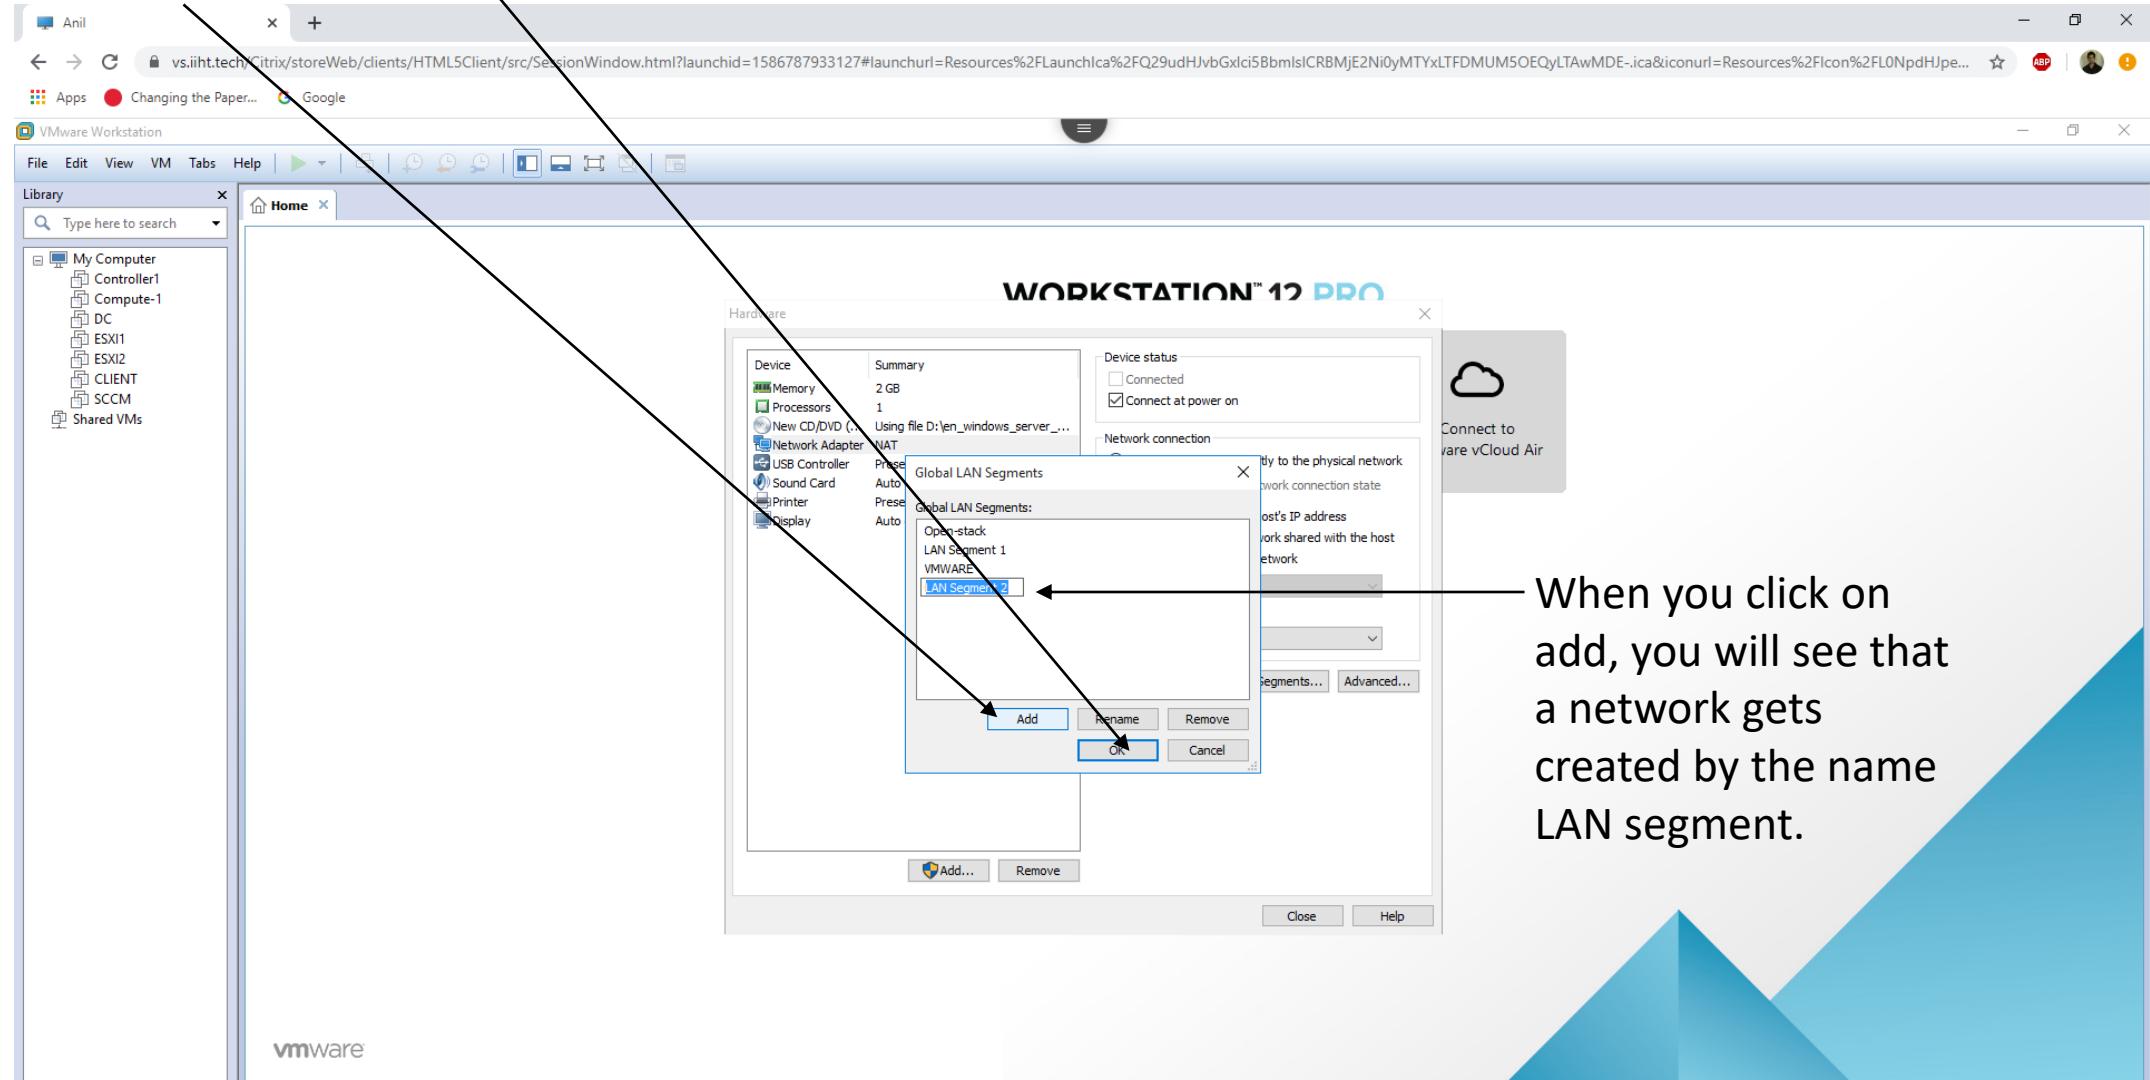

Click on customize hardware

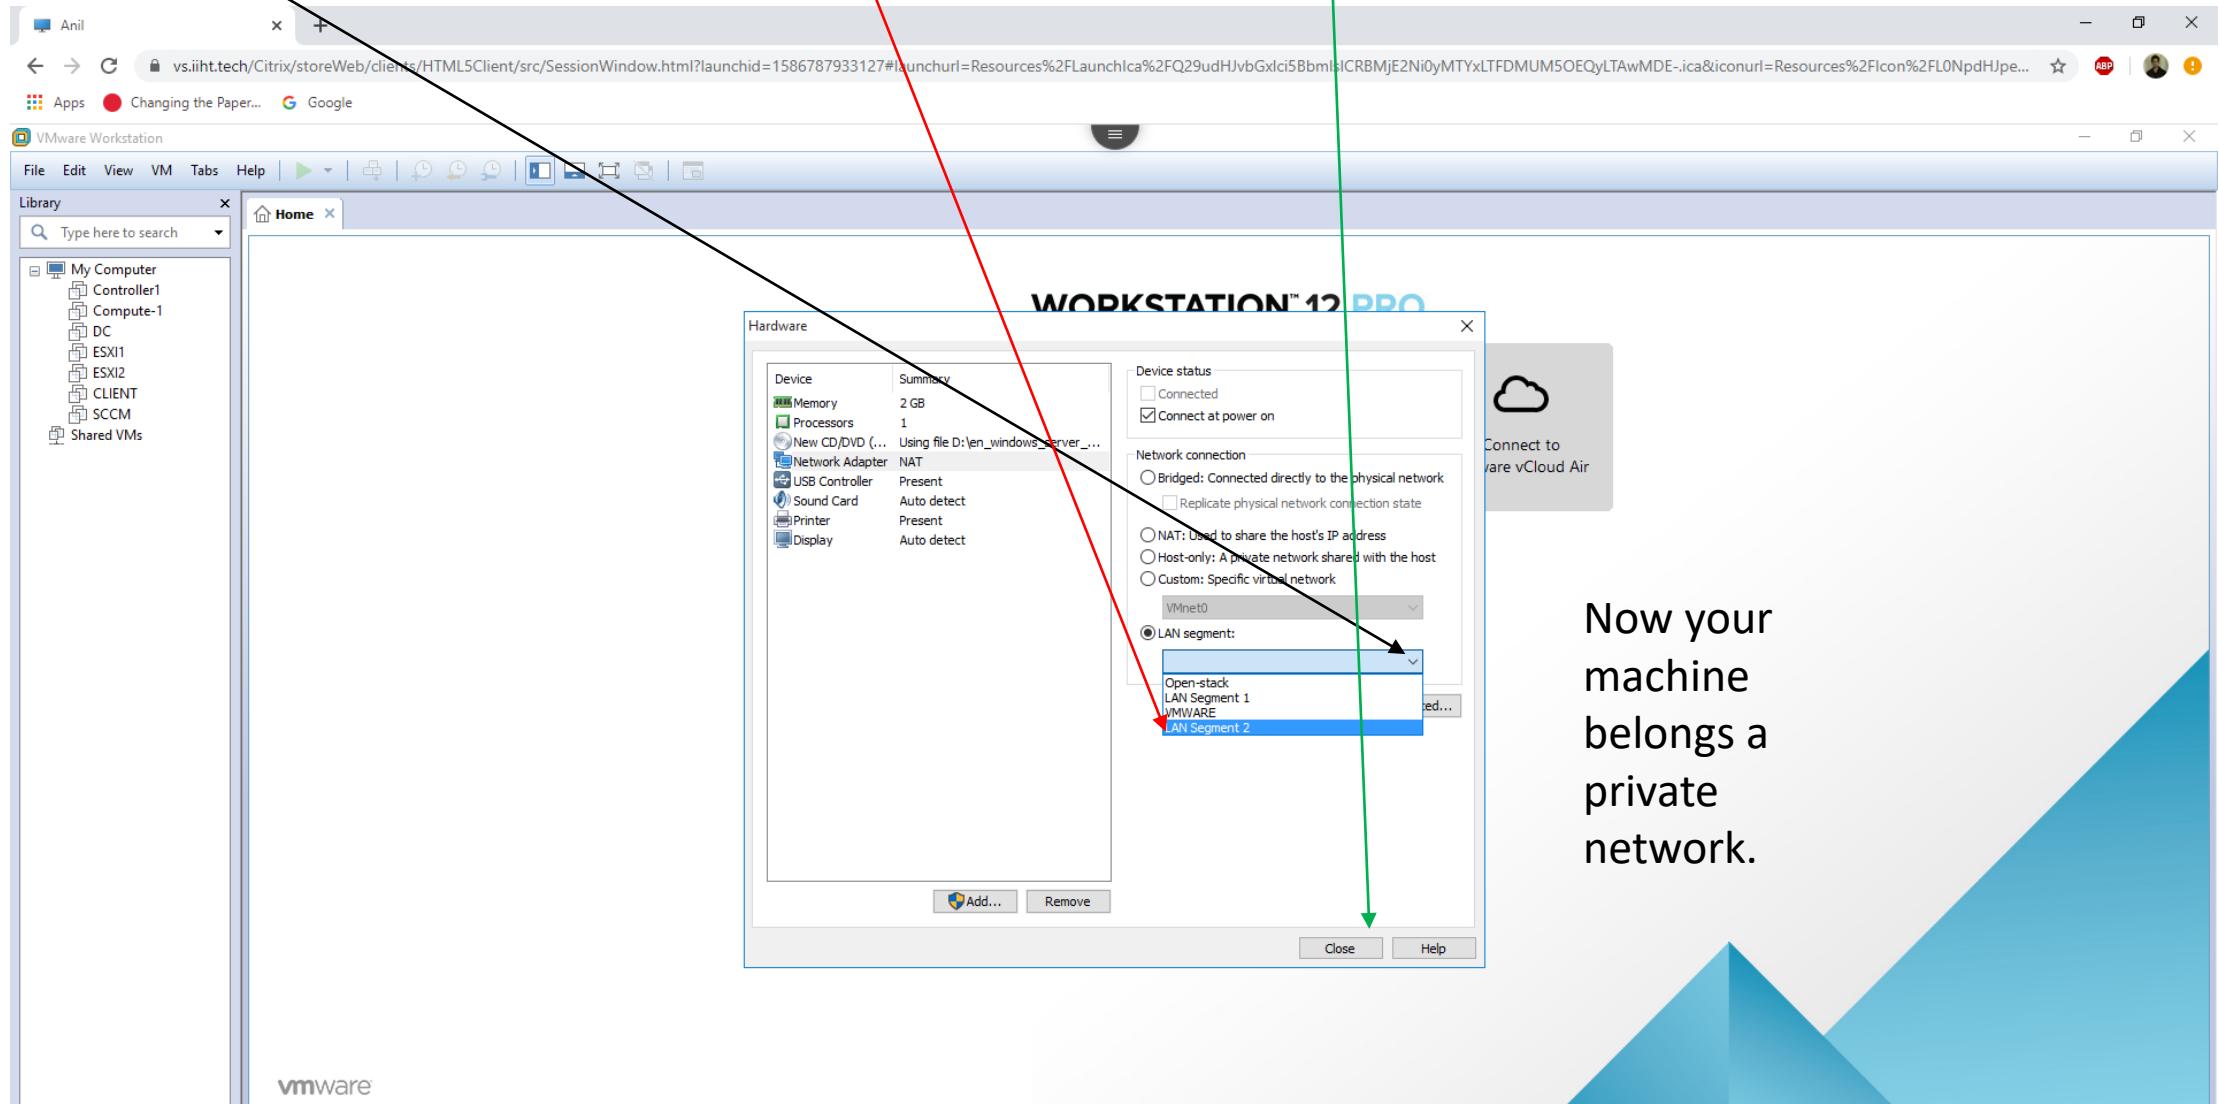

Select Network Adaptor and select LAN segment and click LAN segments

Click on Add and click on OK

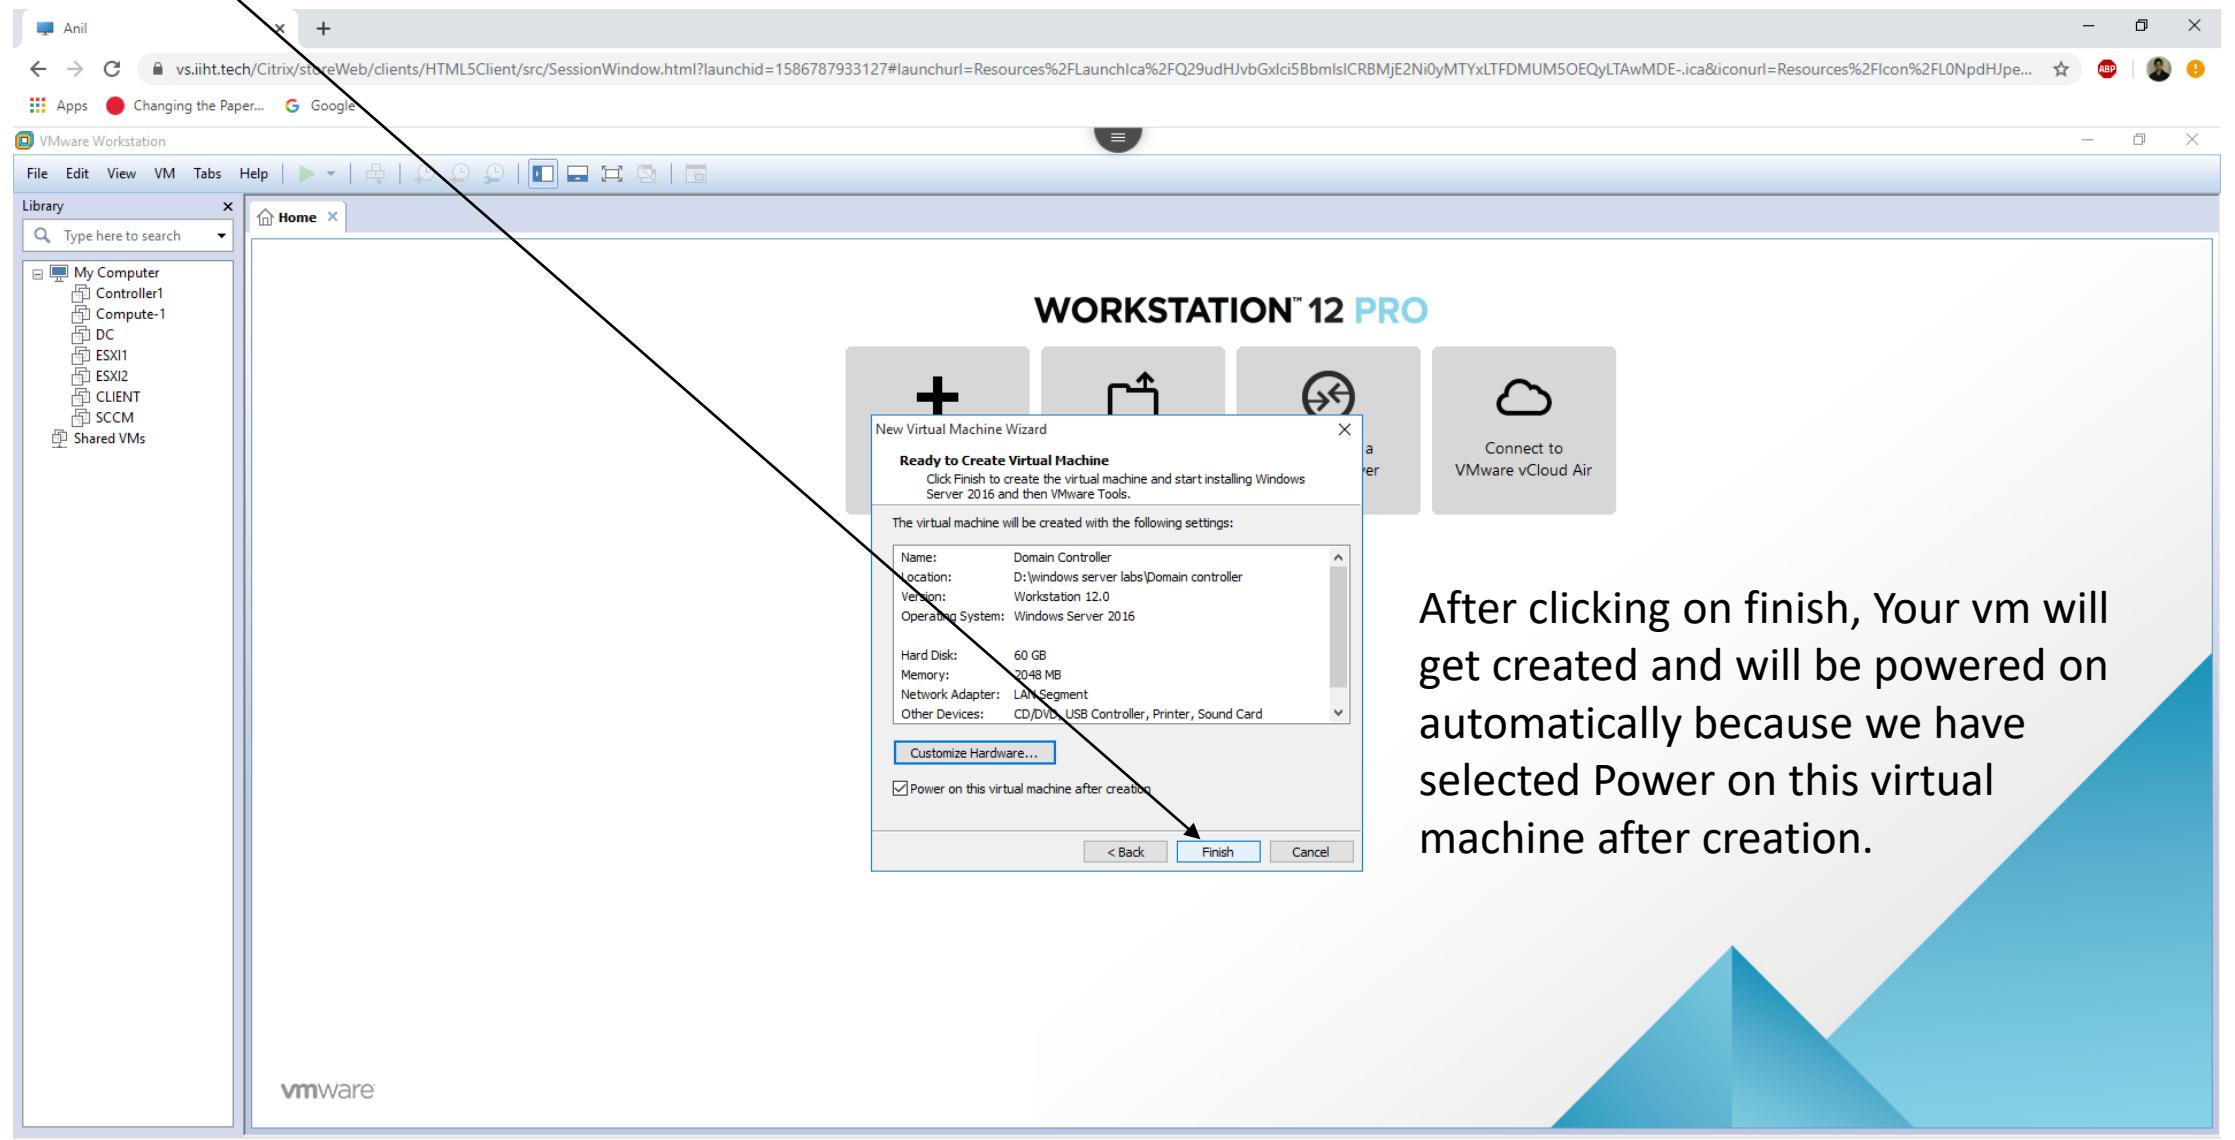

Click on drop down list and select your LAN Segment and click on Close

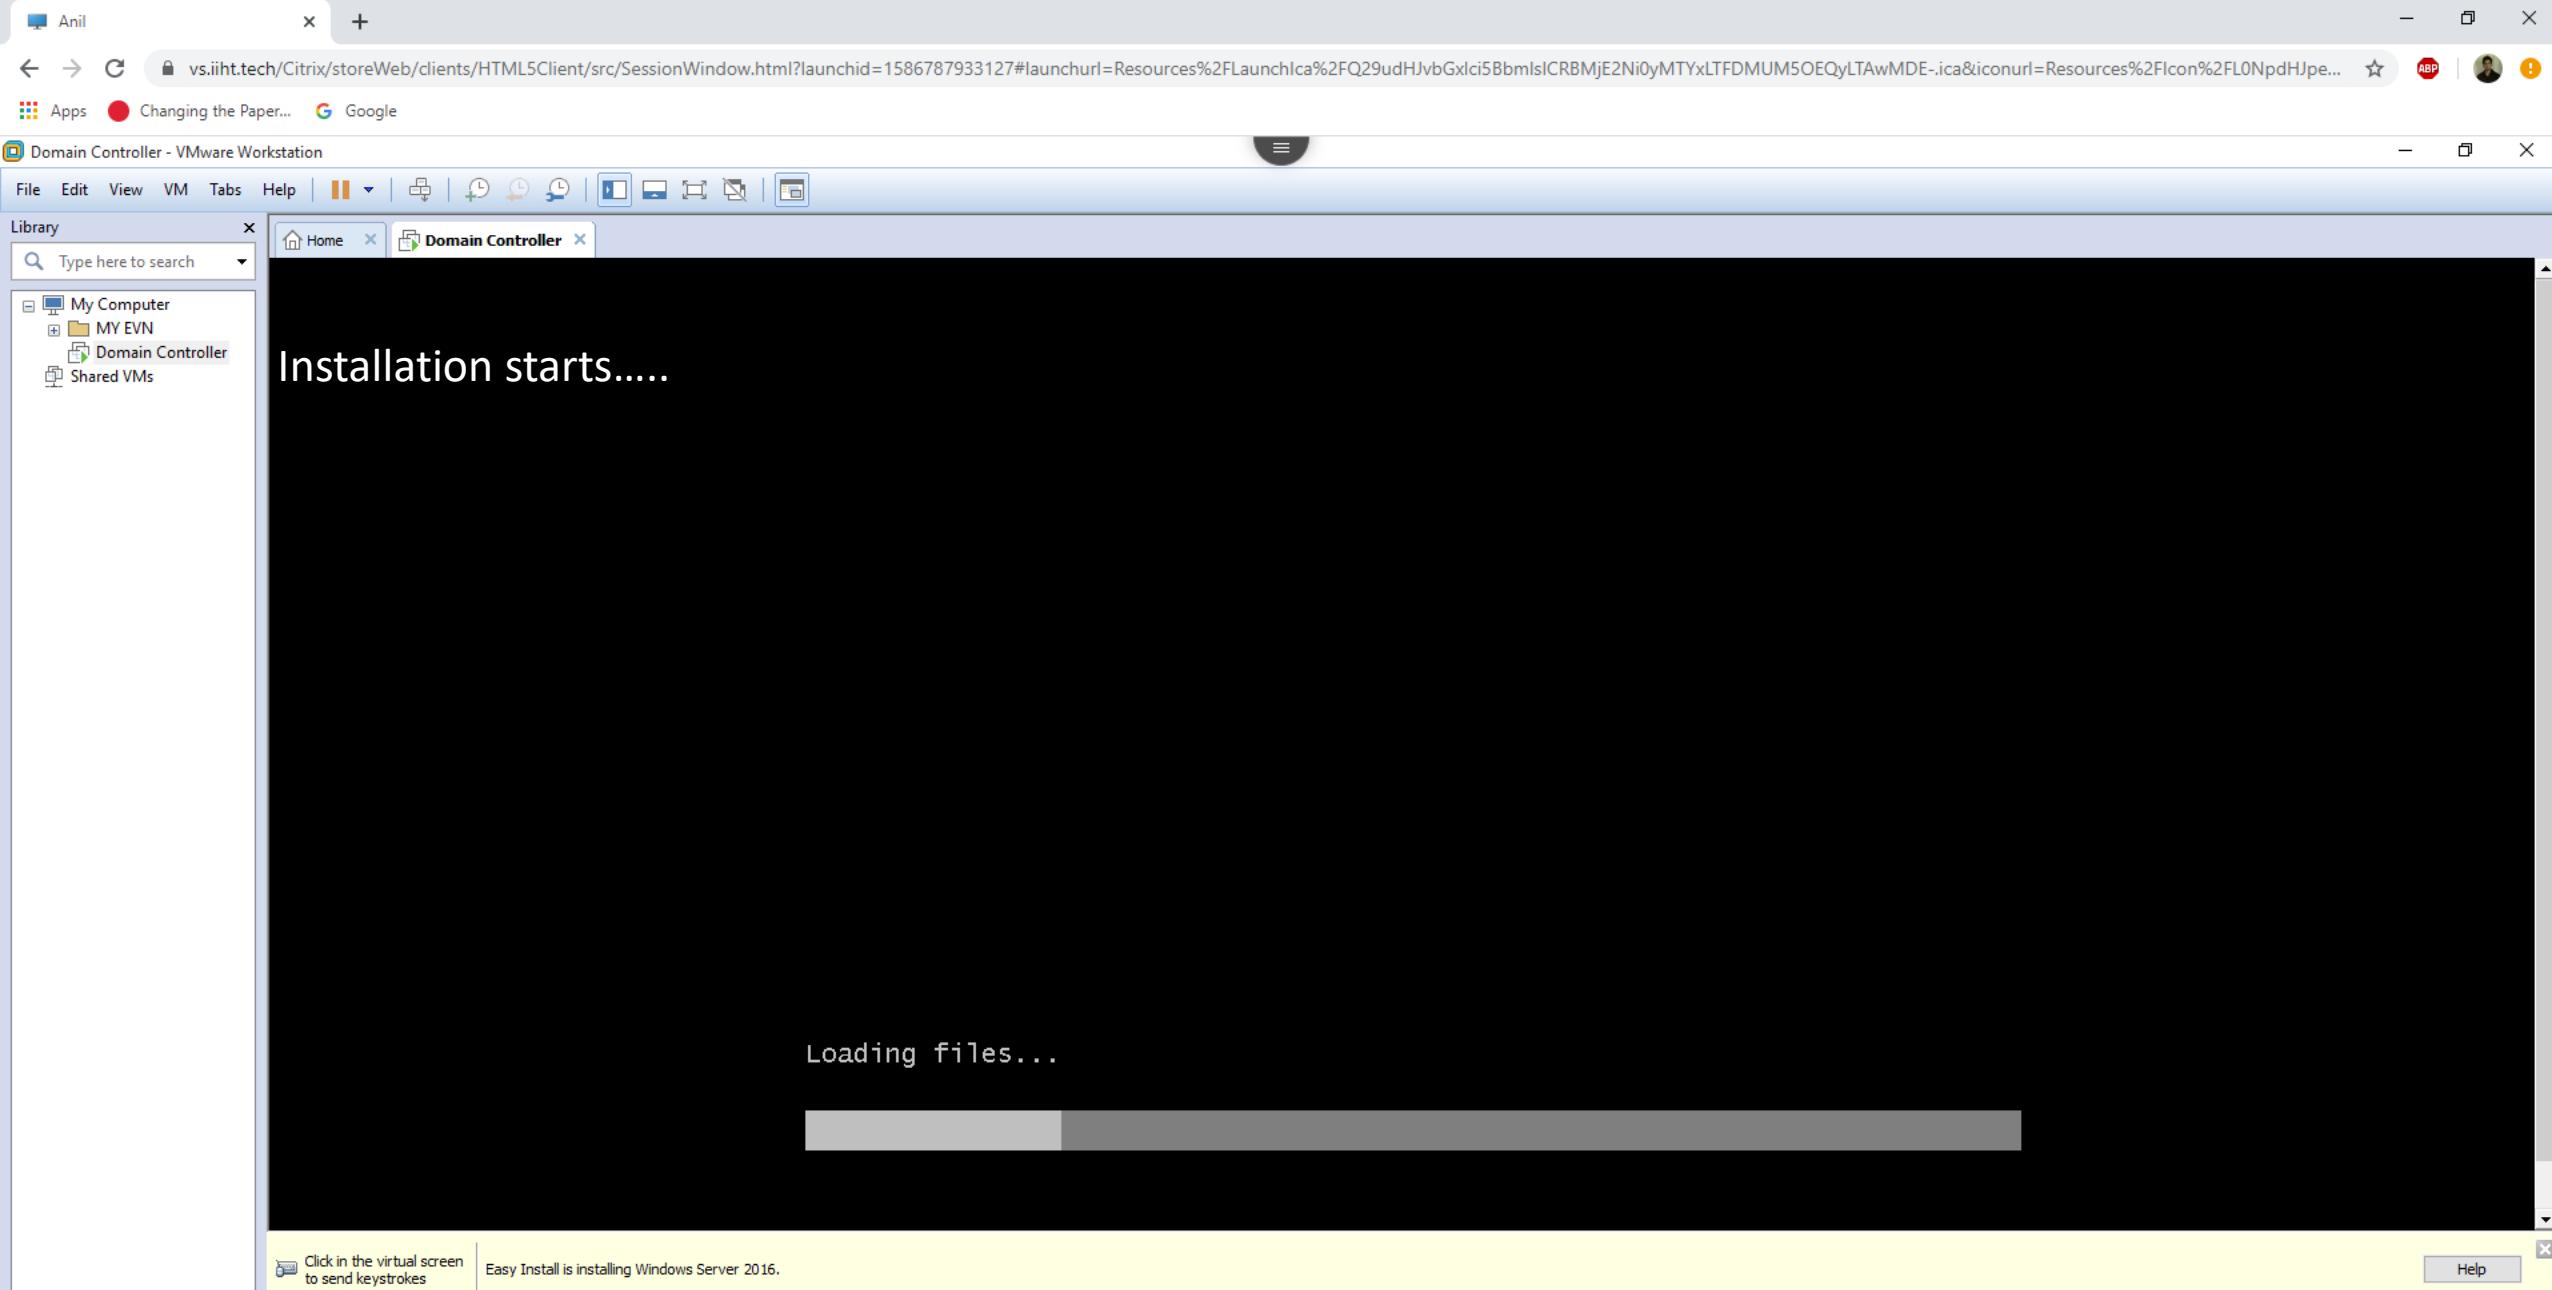

Now your
machine
belongs a
private
network.

Click on Finish

After clicking on finish, Your vm will get created and will be powered on automatically because we have selected Power on this virtual machine after creation.

To direct input to this VM, click inside or press Ctrl+G.

Search the web and Windows

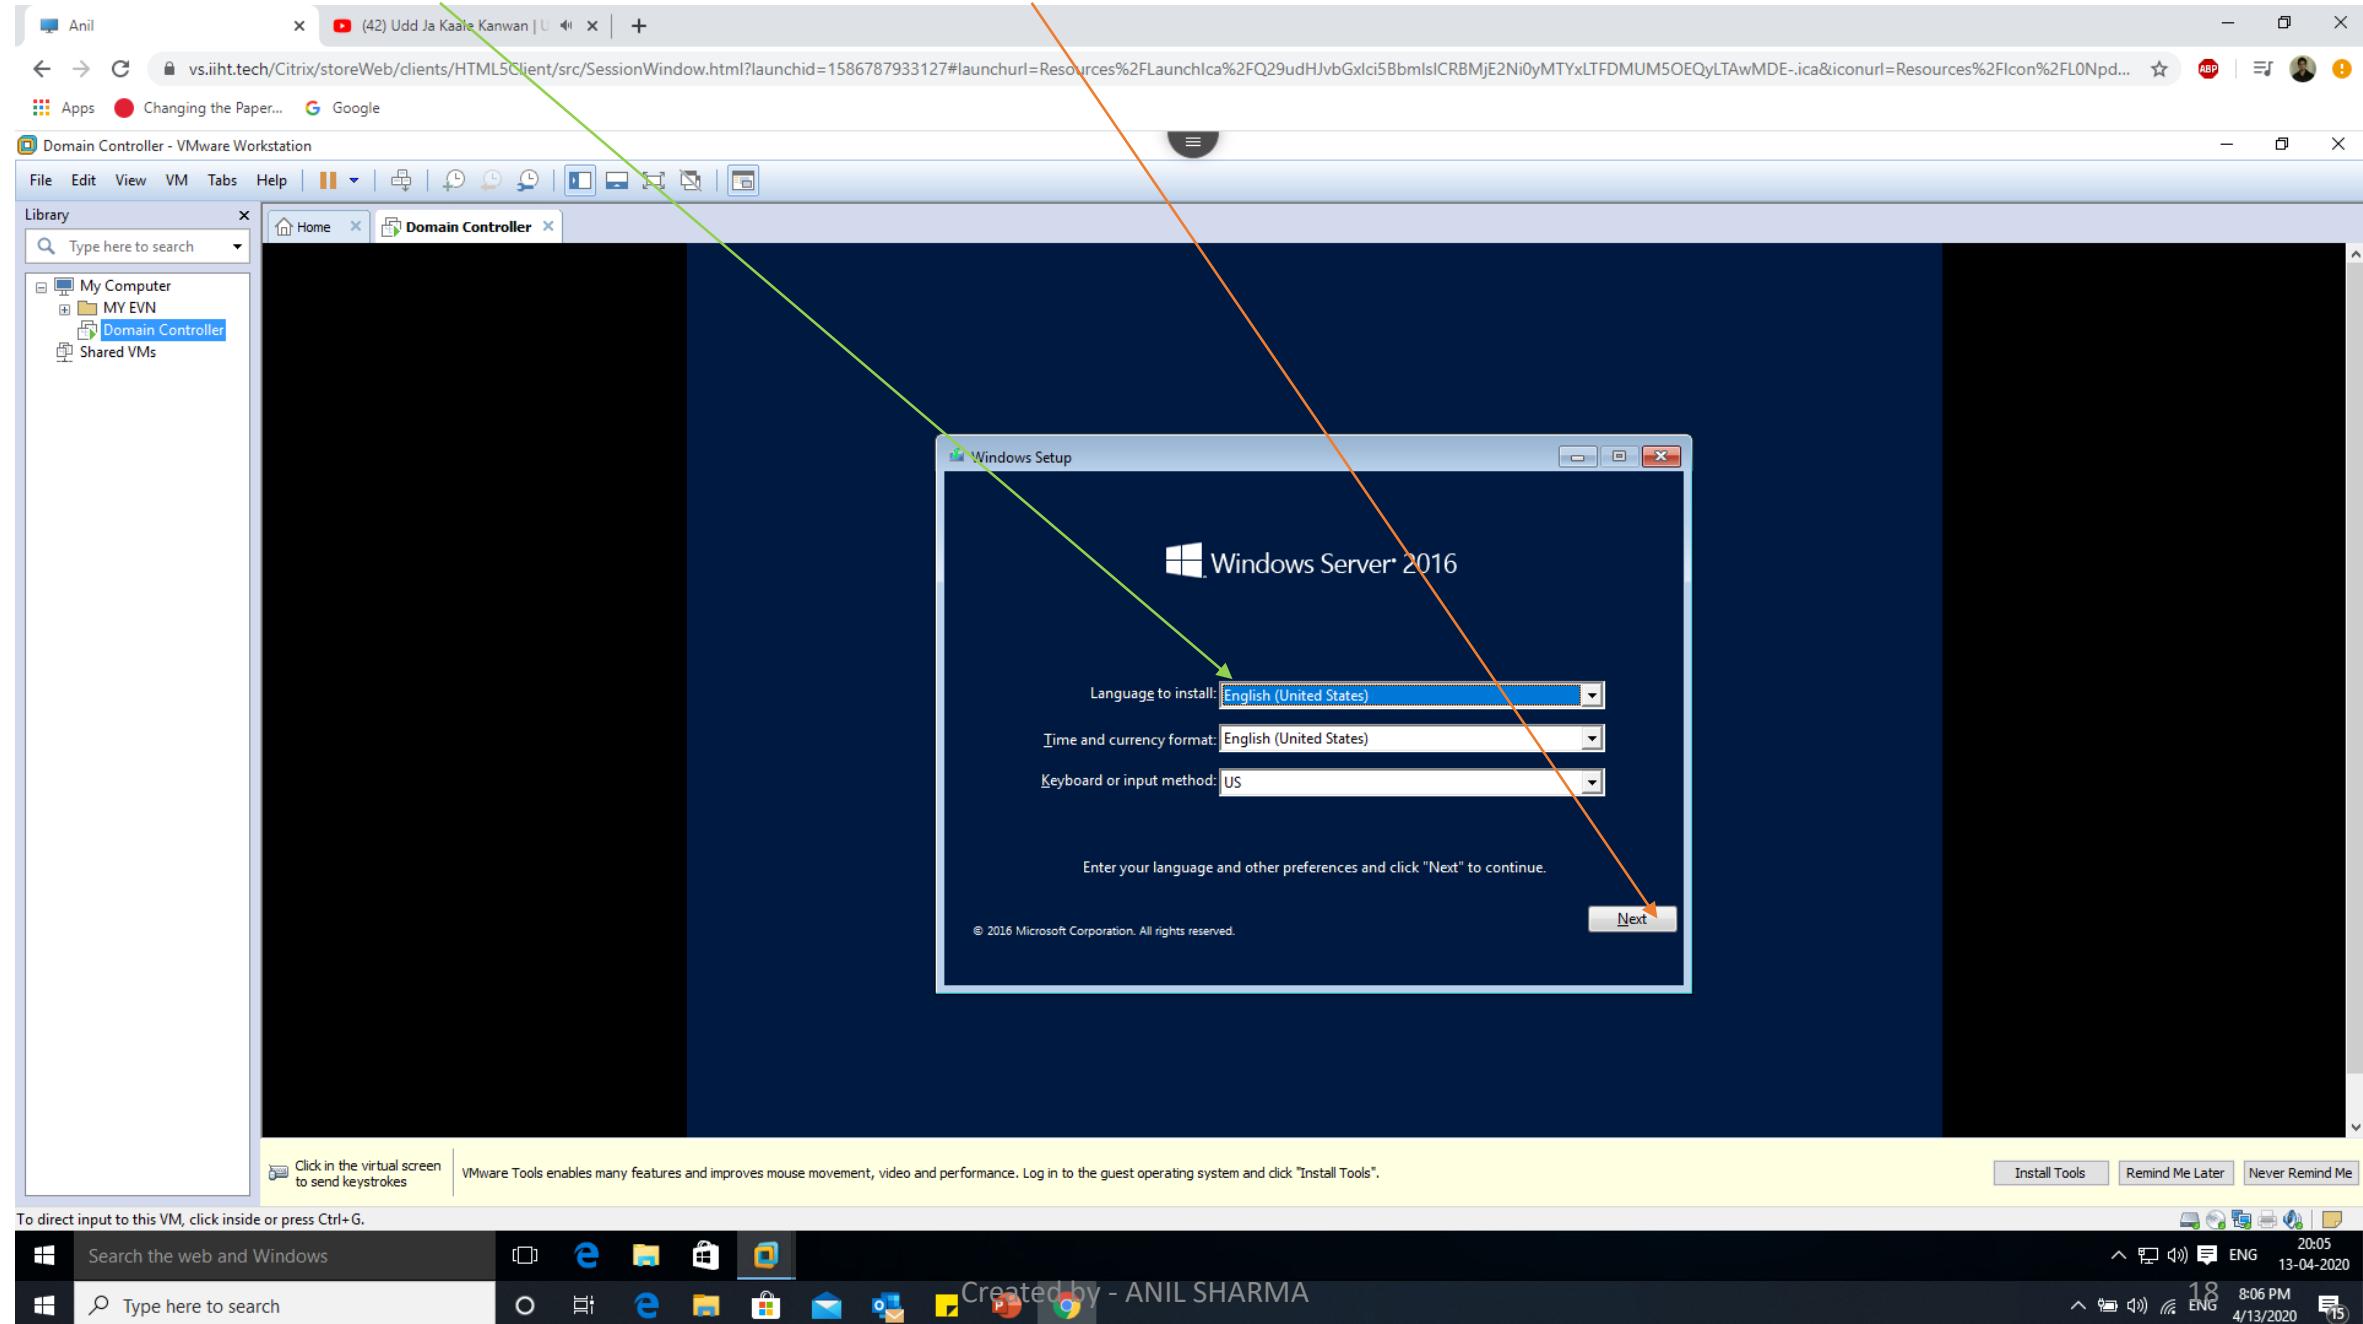

Created by - ANIL SHARMA

Type here to search

Select your preferred language options and click on Next

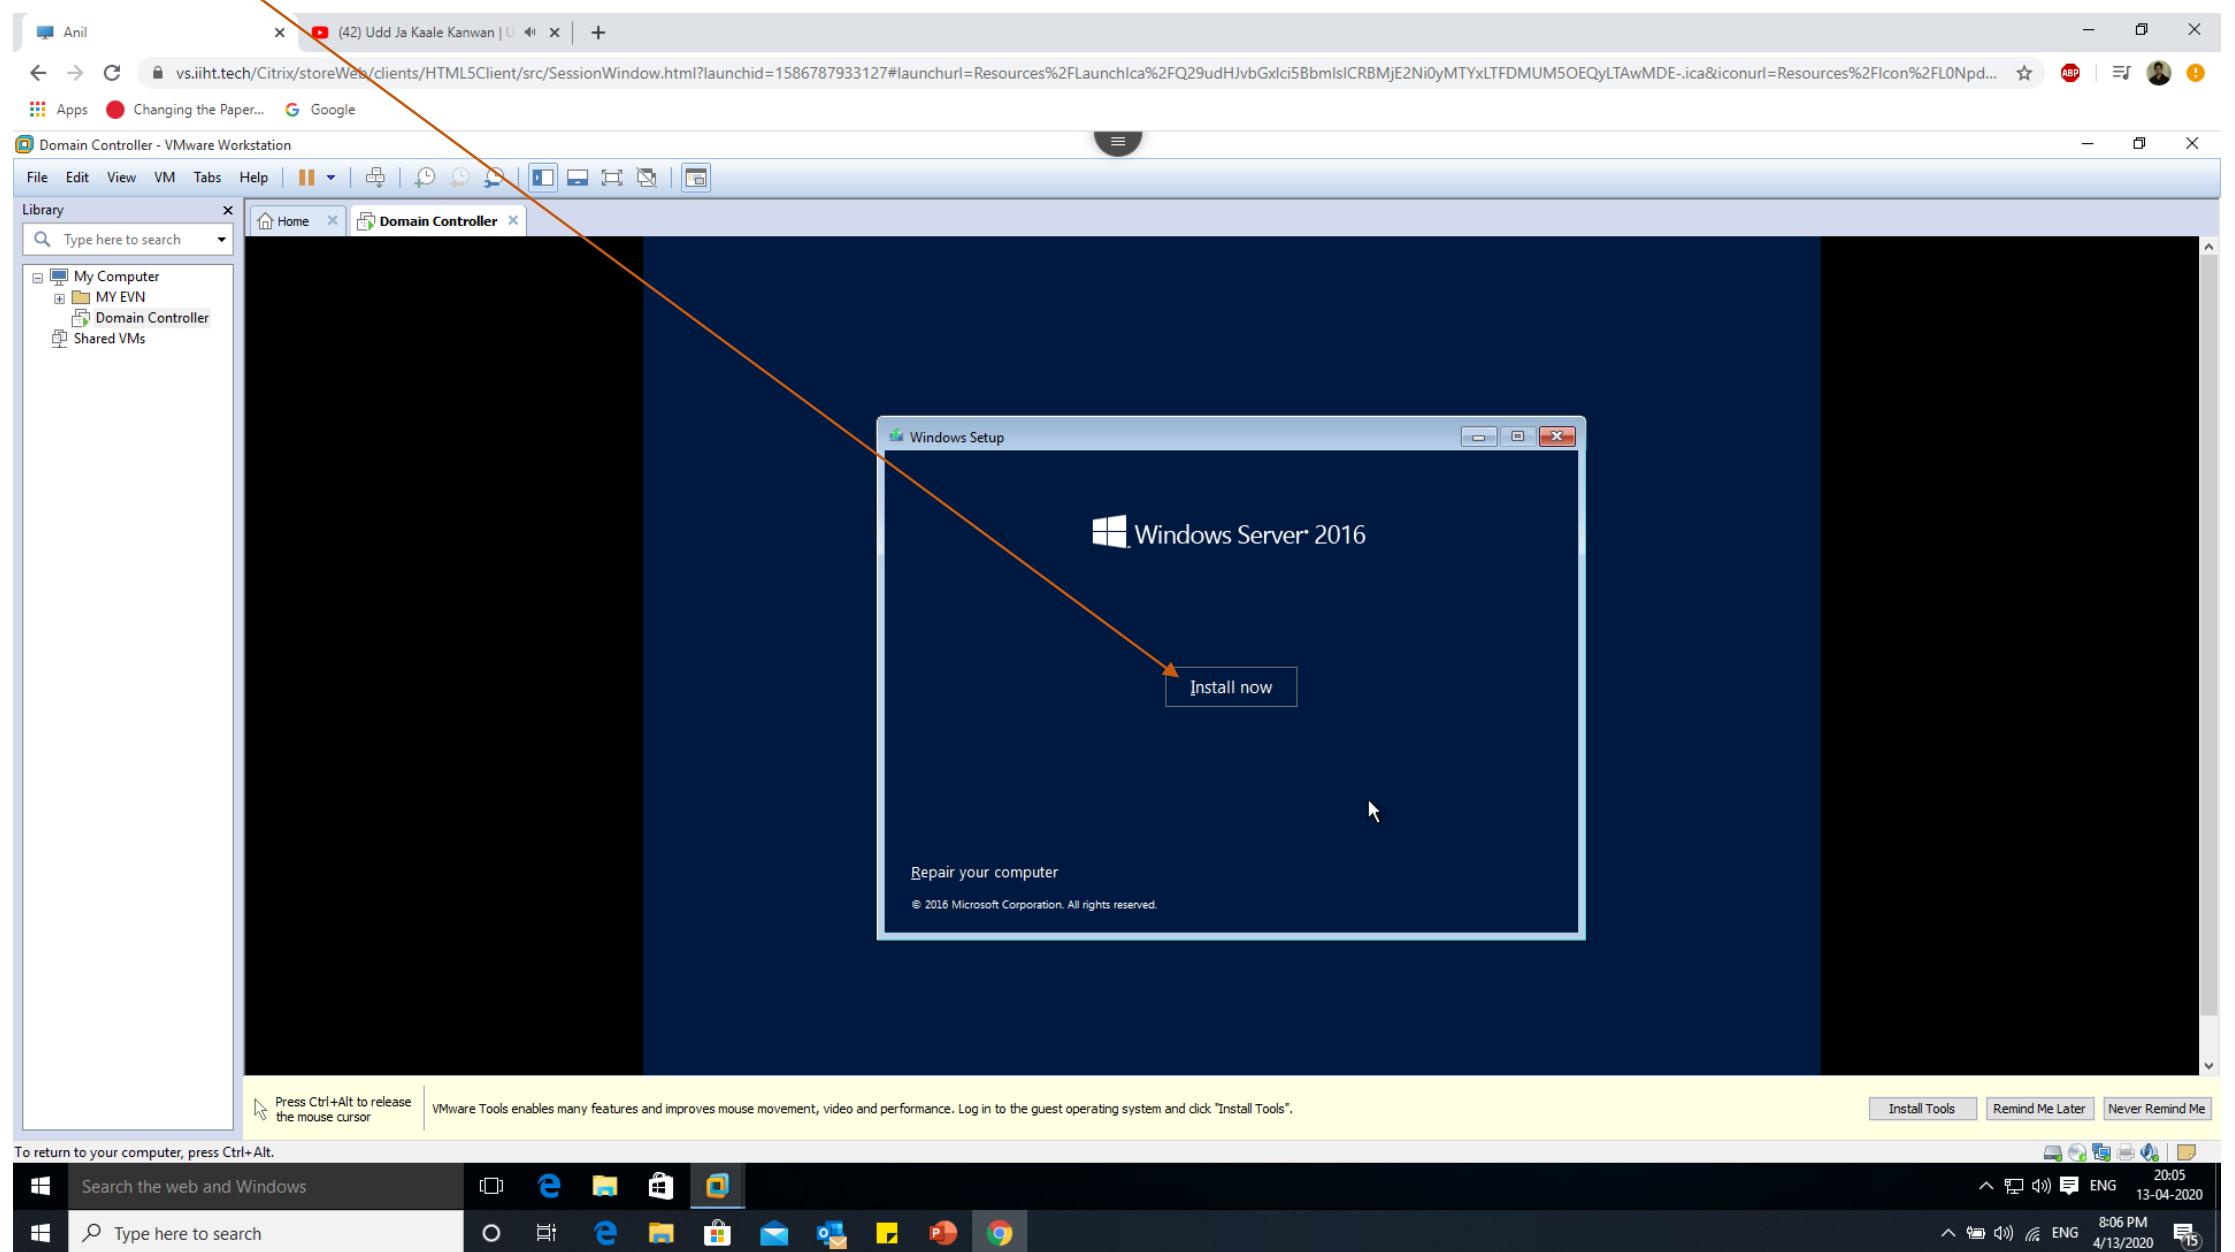

To direct input to this VM, click inside or press Ctrl+G.

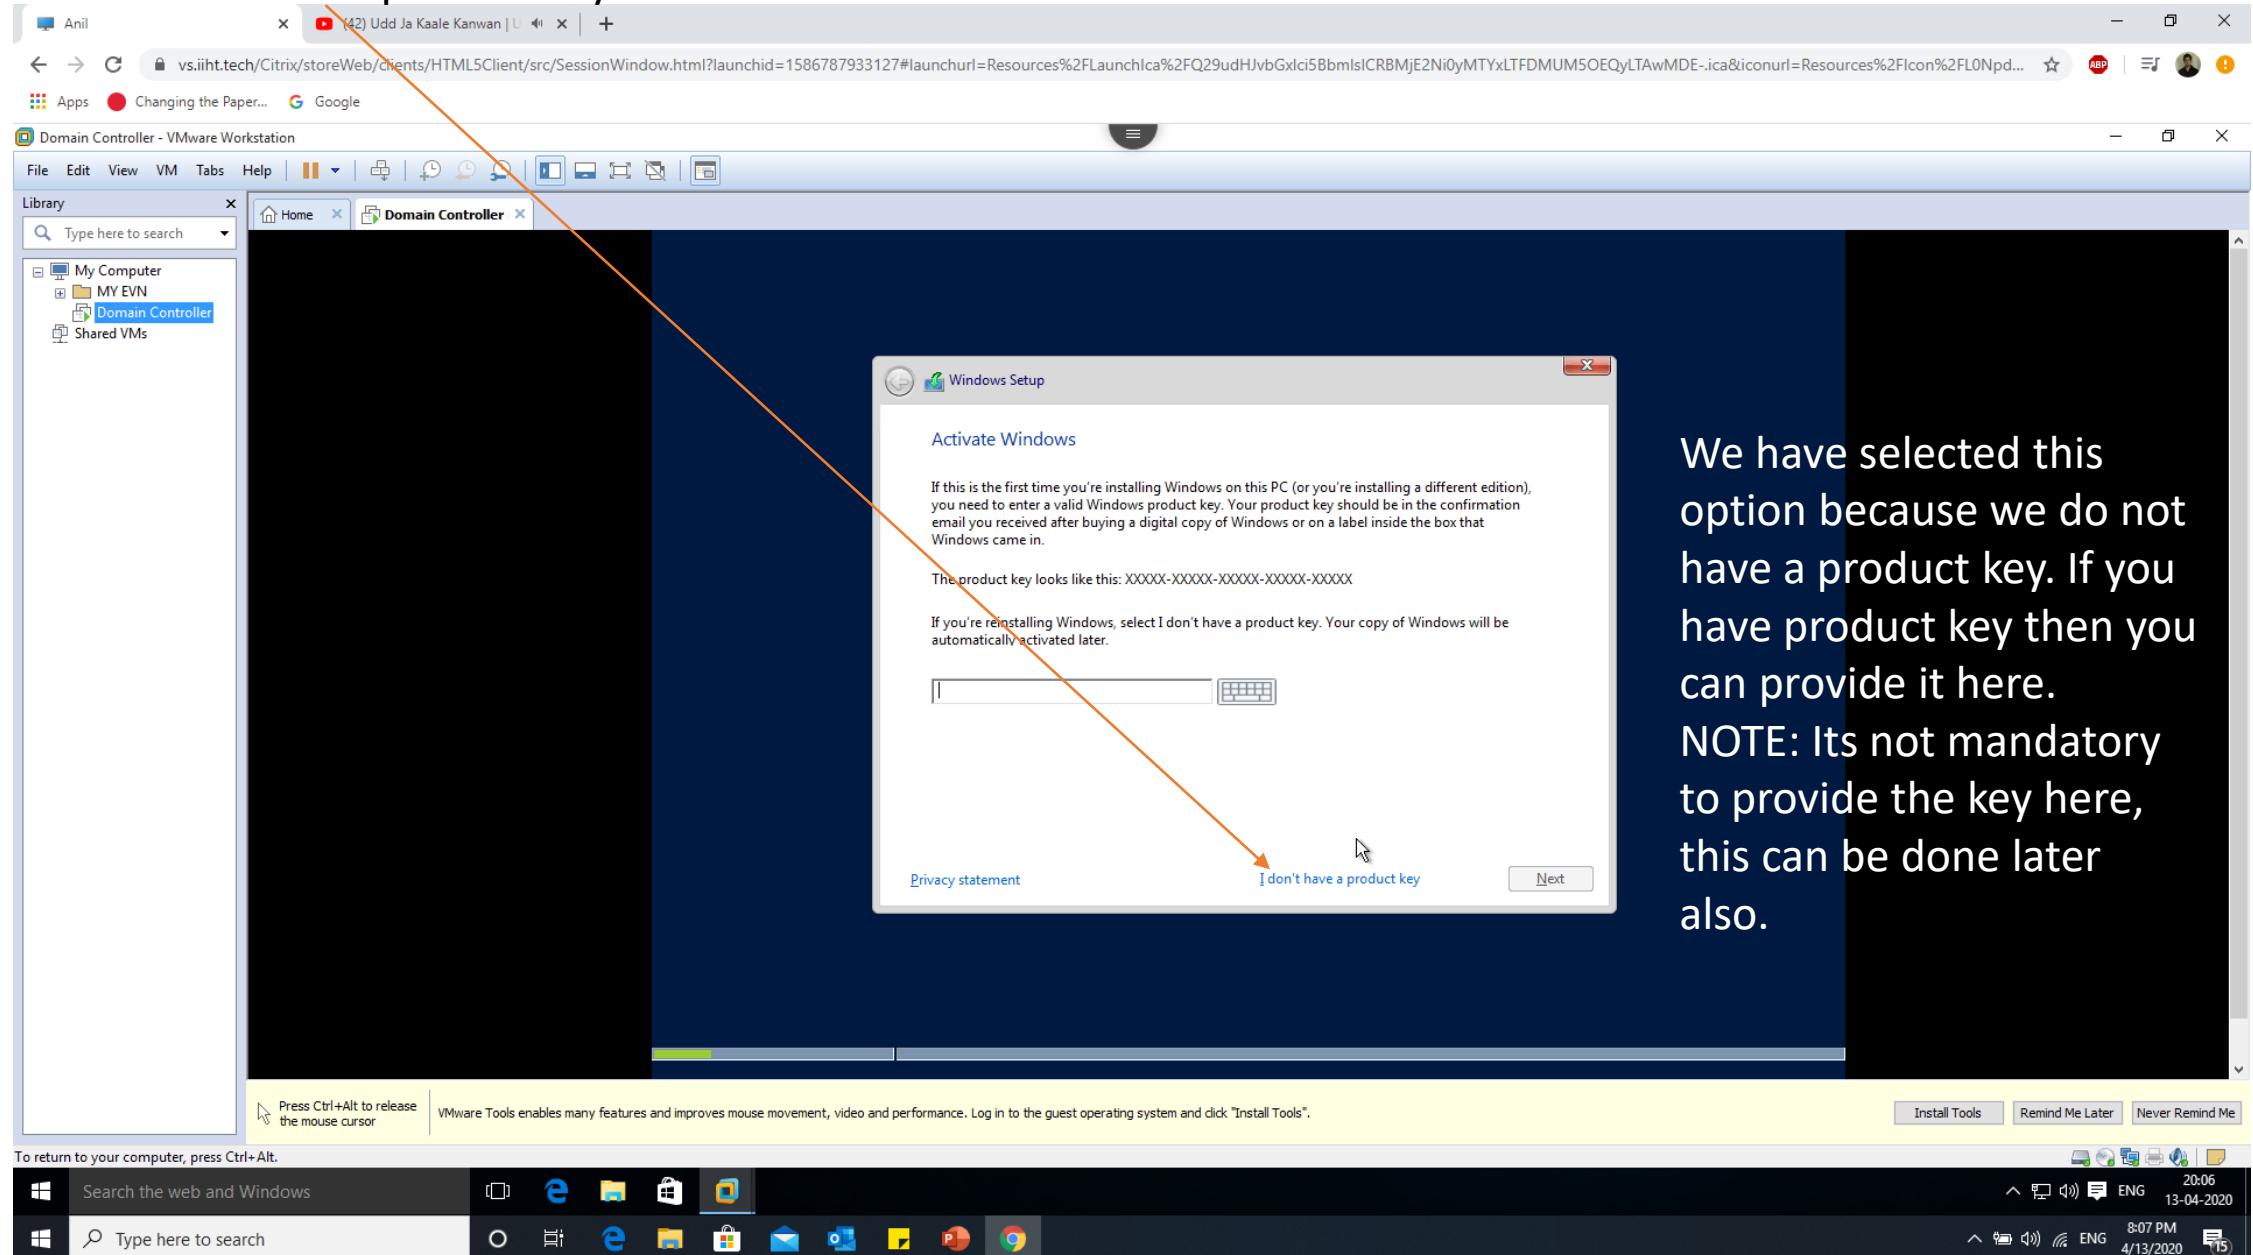

Created by - ANIL SHARMA

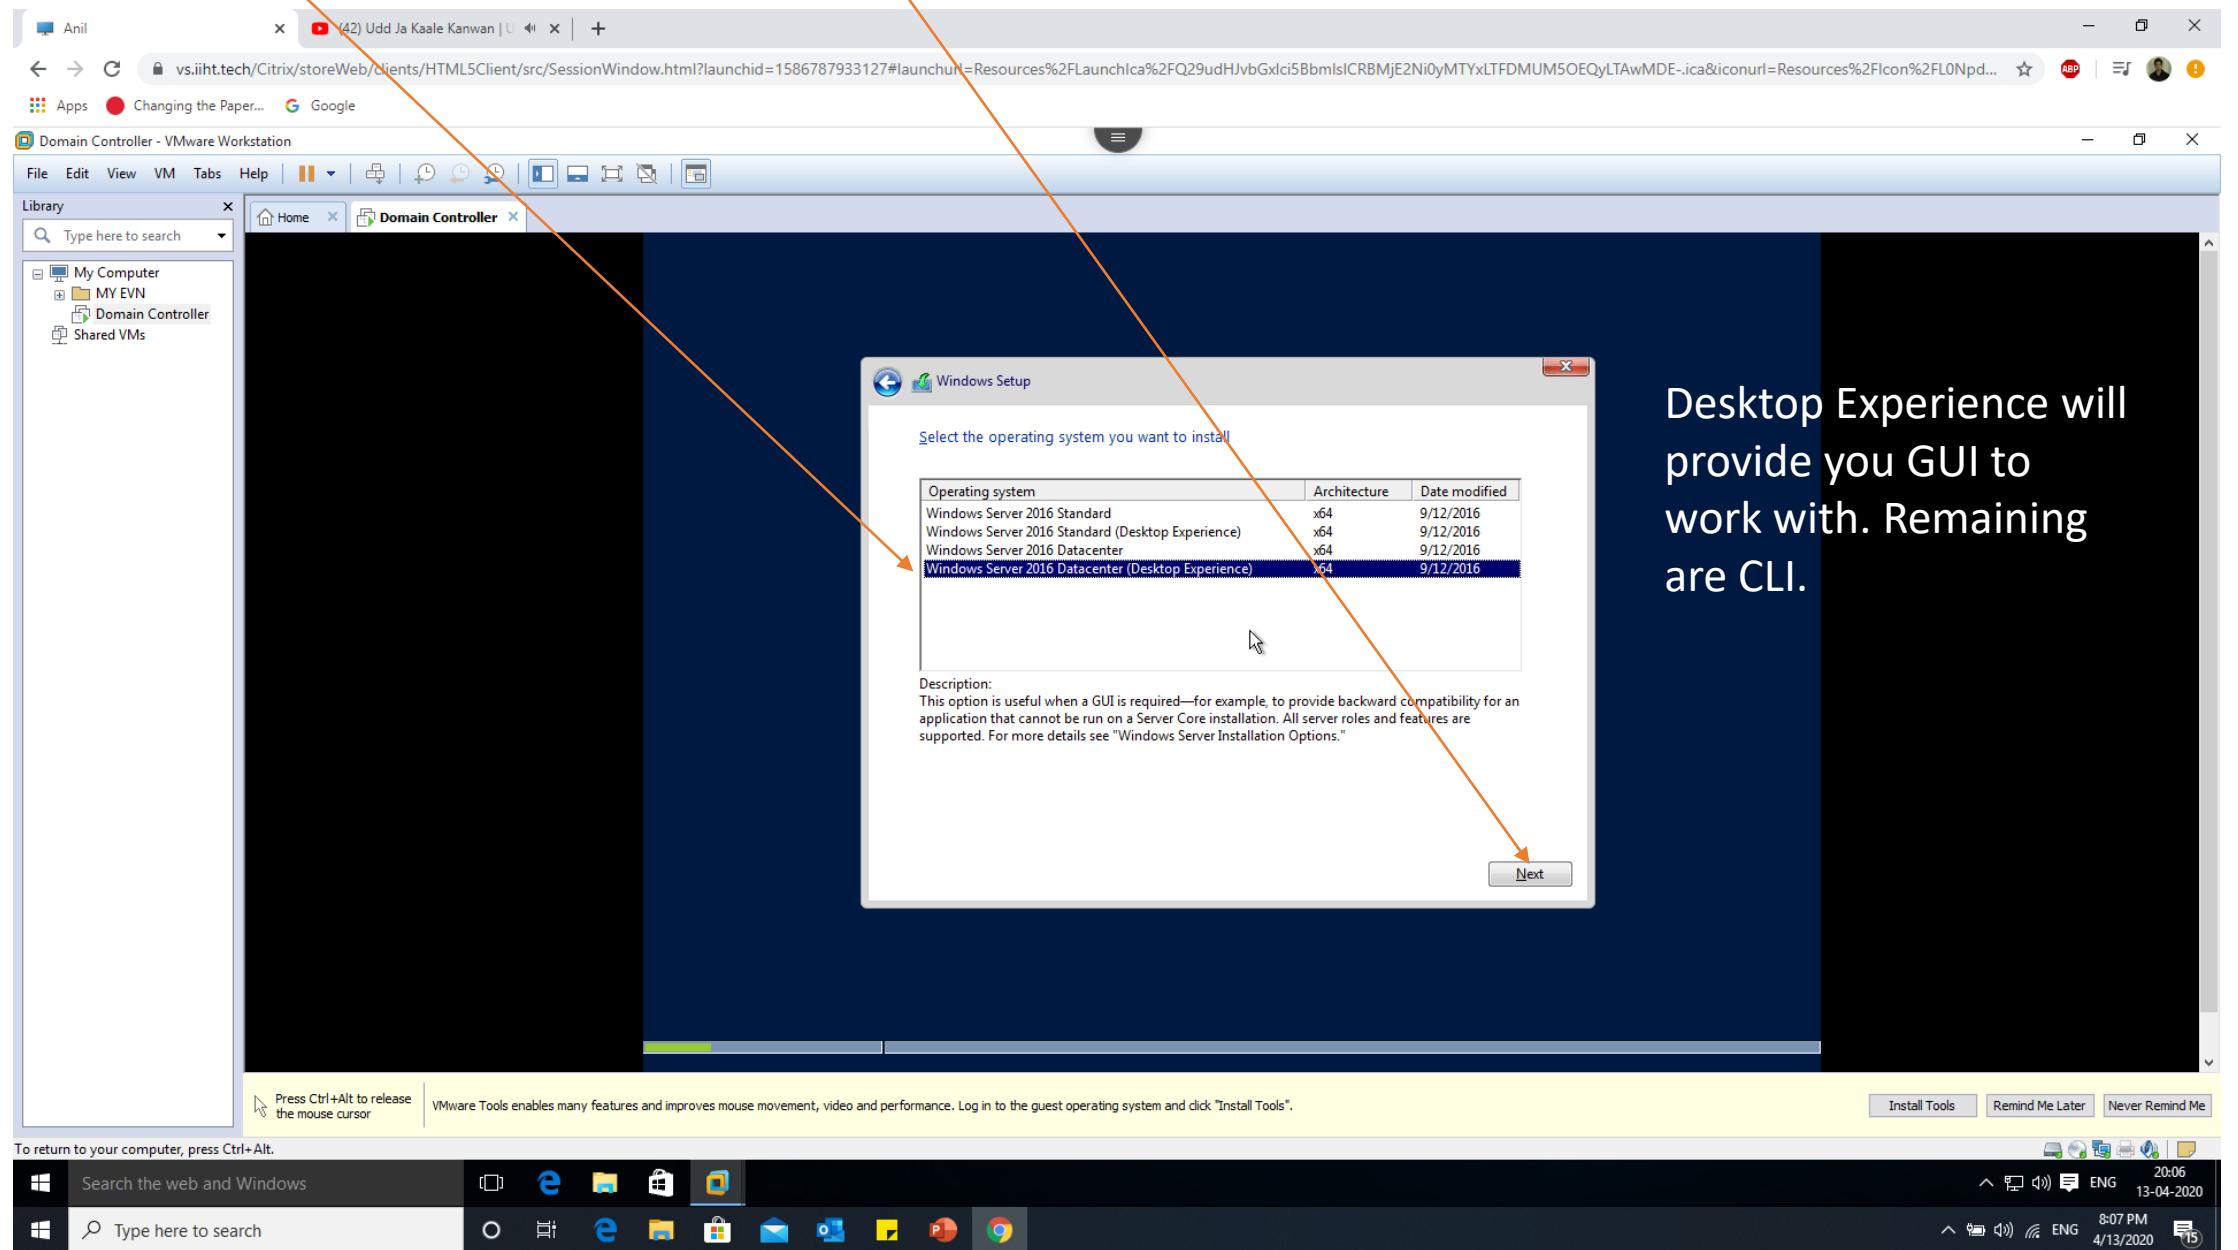

Click on Install Now

Click on I don't have product key

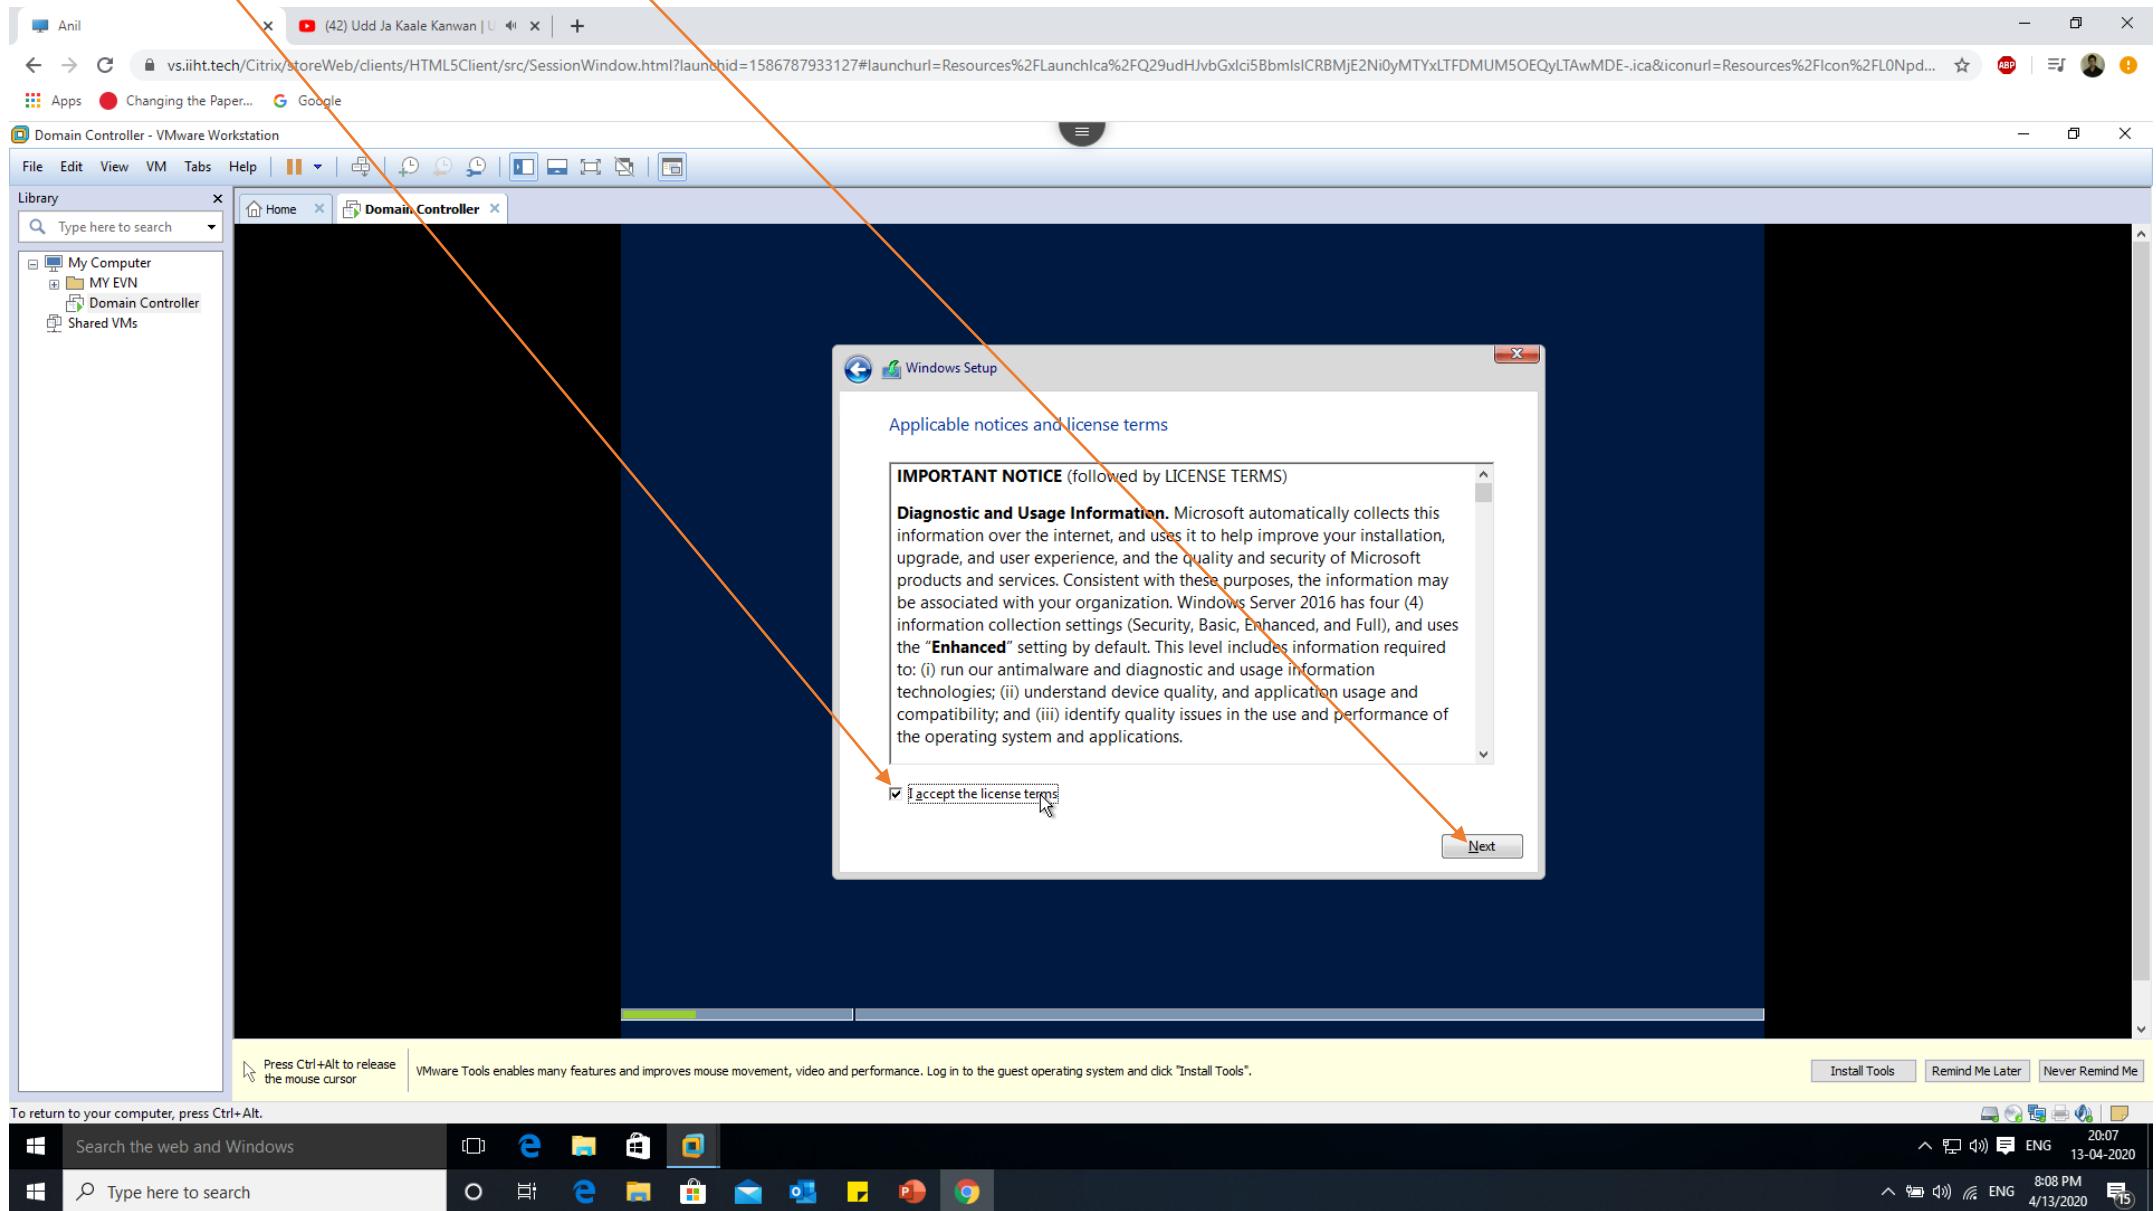

Select the desired operating system and click on next

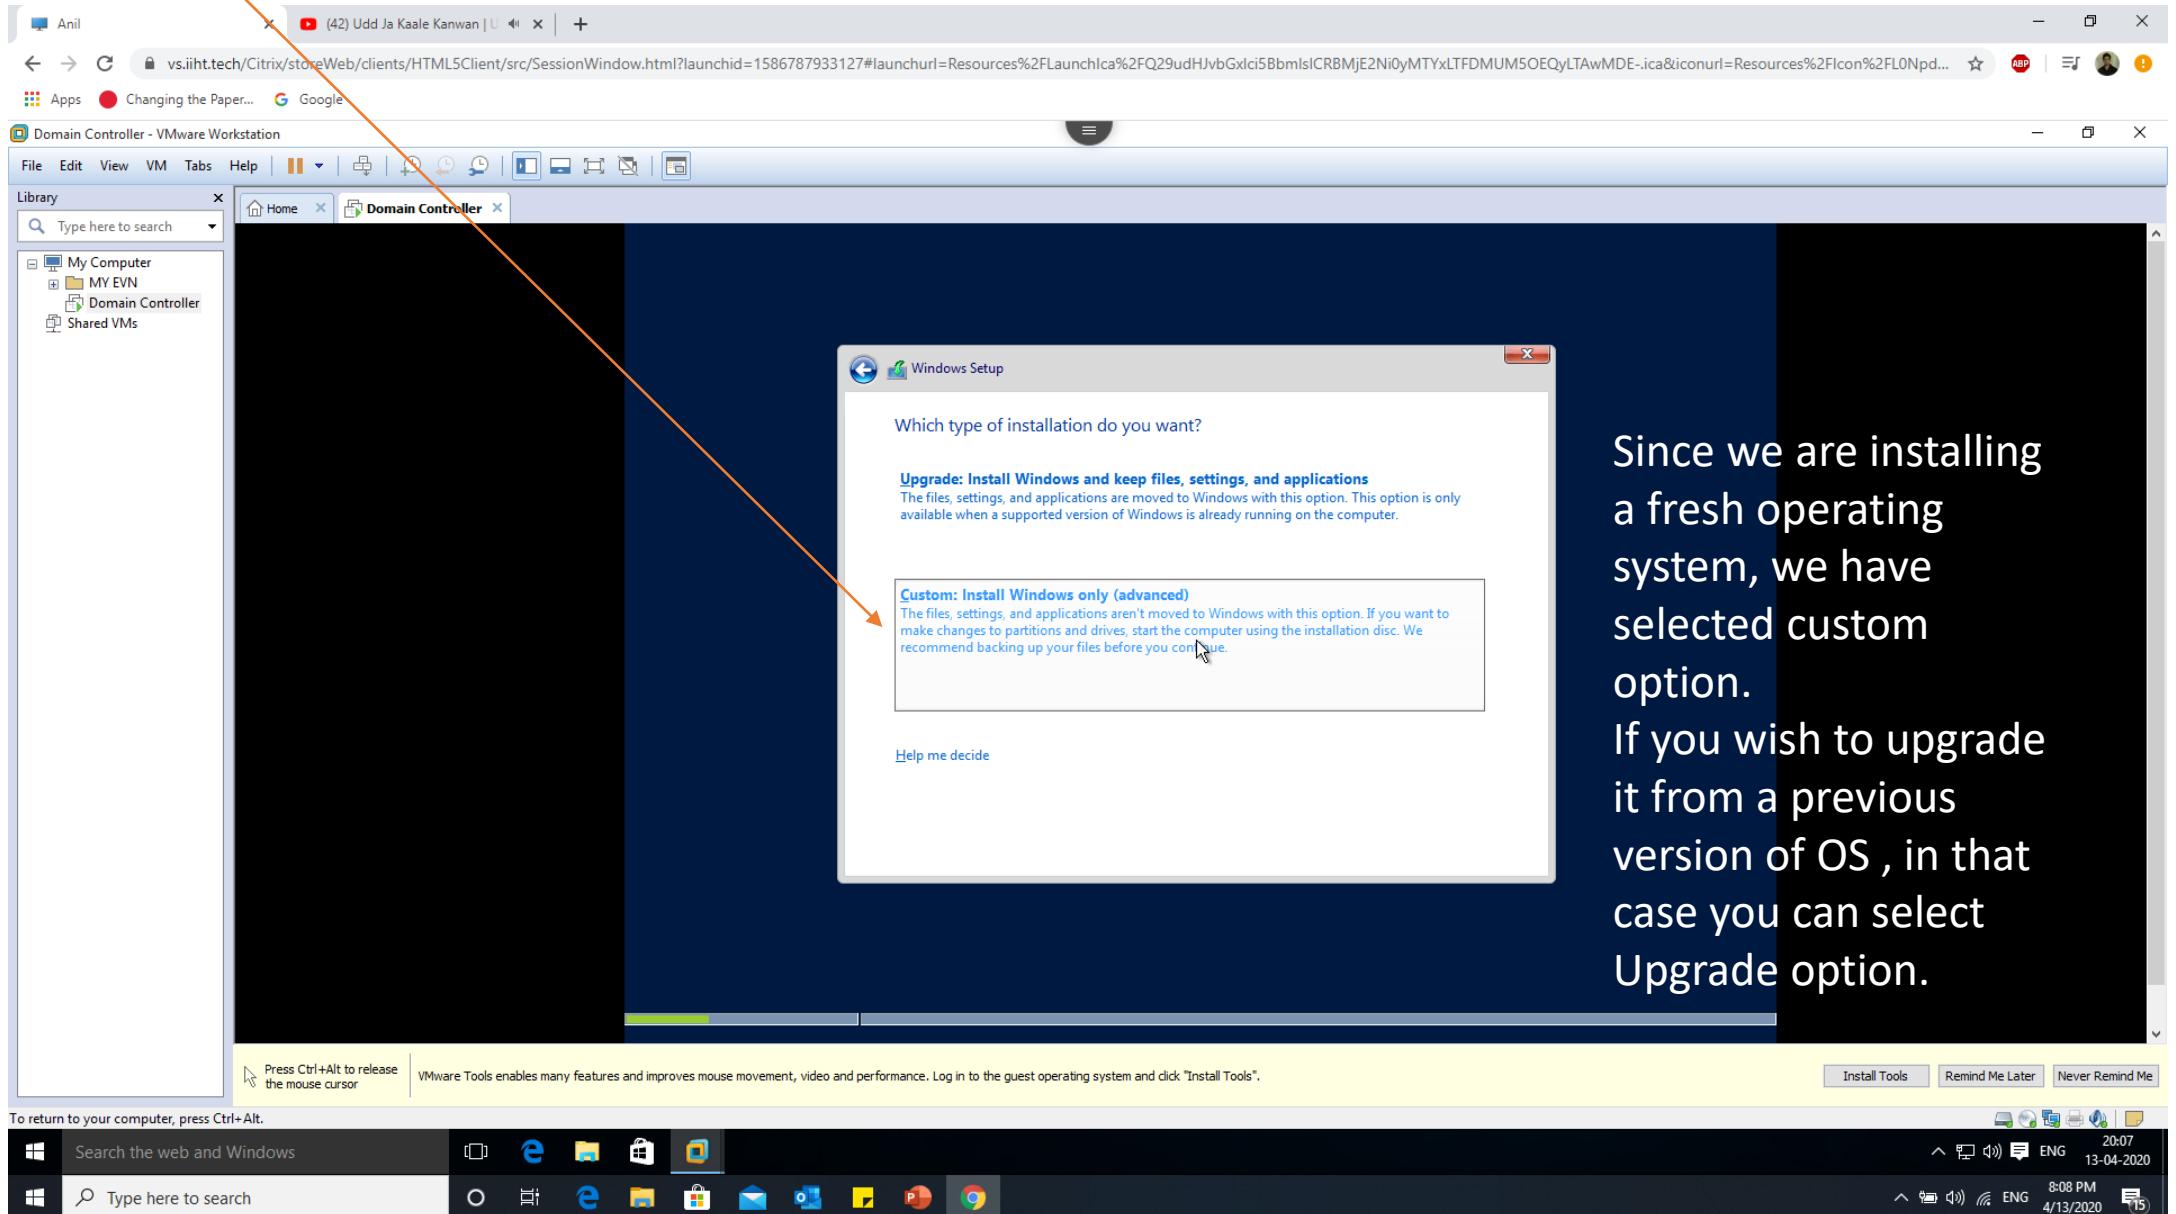

Desktop Experience will provide you GUI to work with. Remaining are CLI.

Accept license terms and click on next

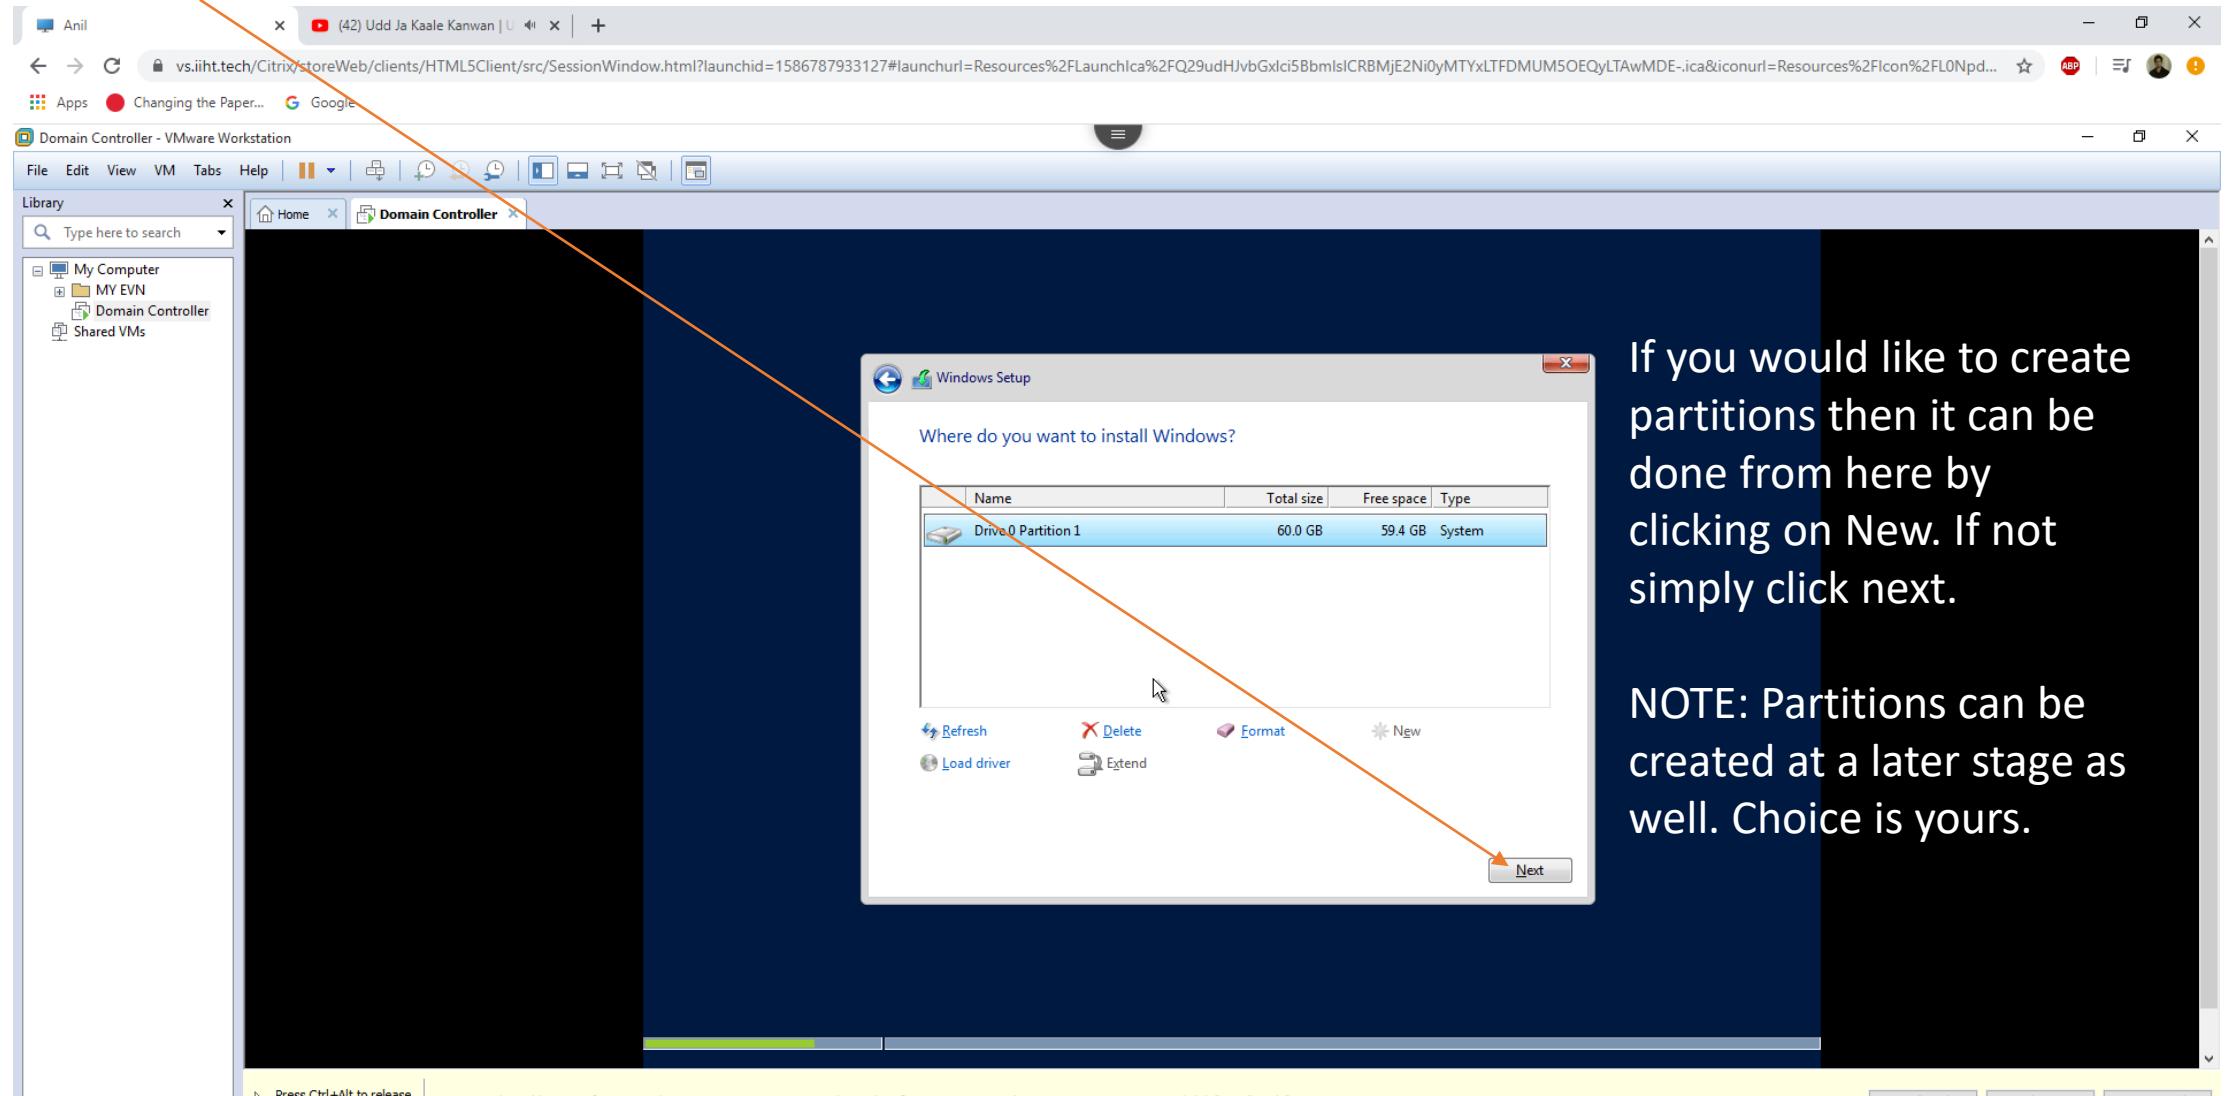

Select Custom

Since we are installing a fresh operating system, we have selected custom option. If you wish to upgrade it from a previous version of OS , in that case you can select Upgrade option.

Click on next

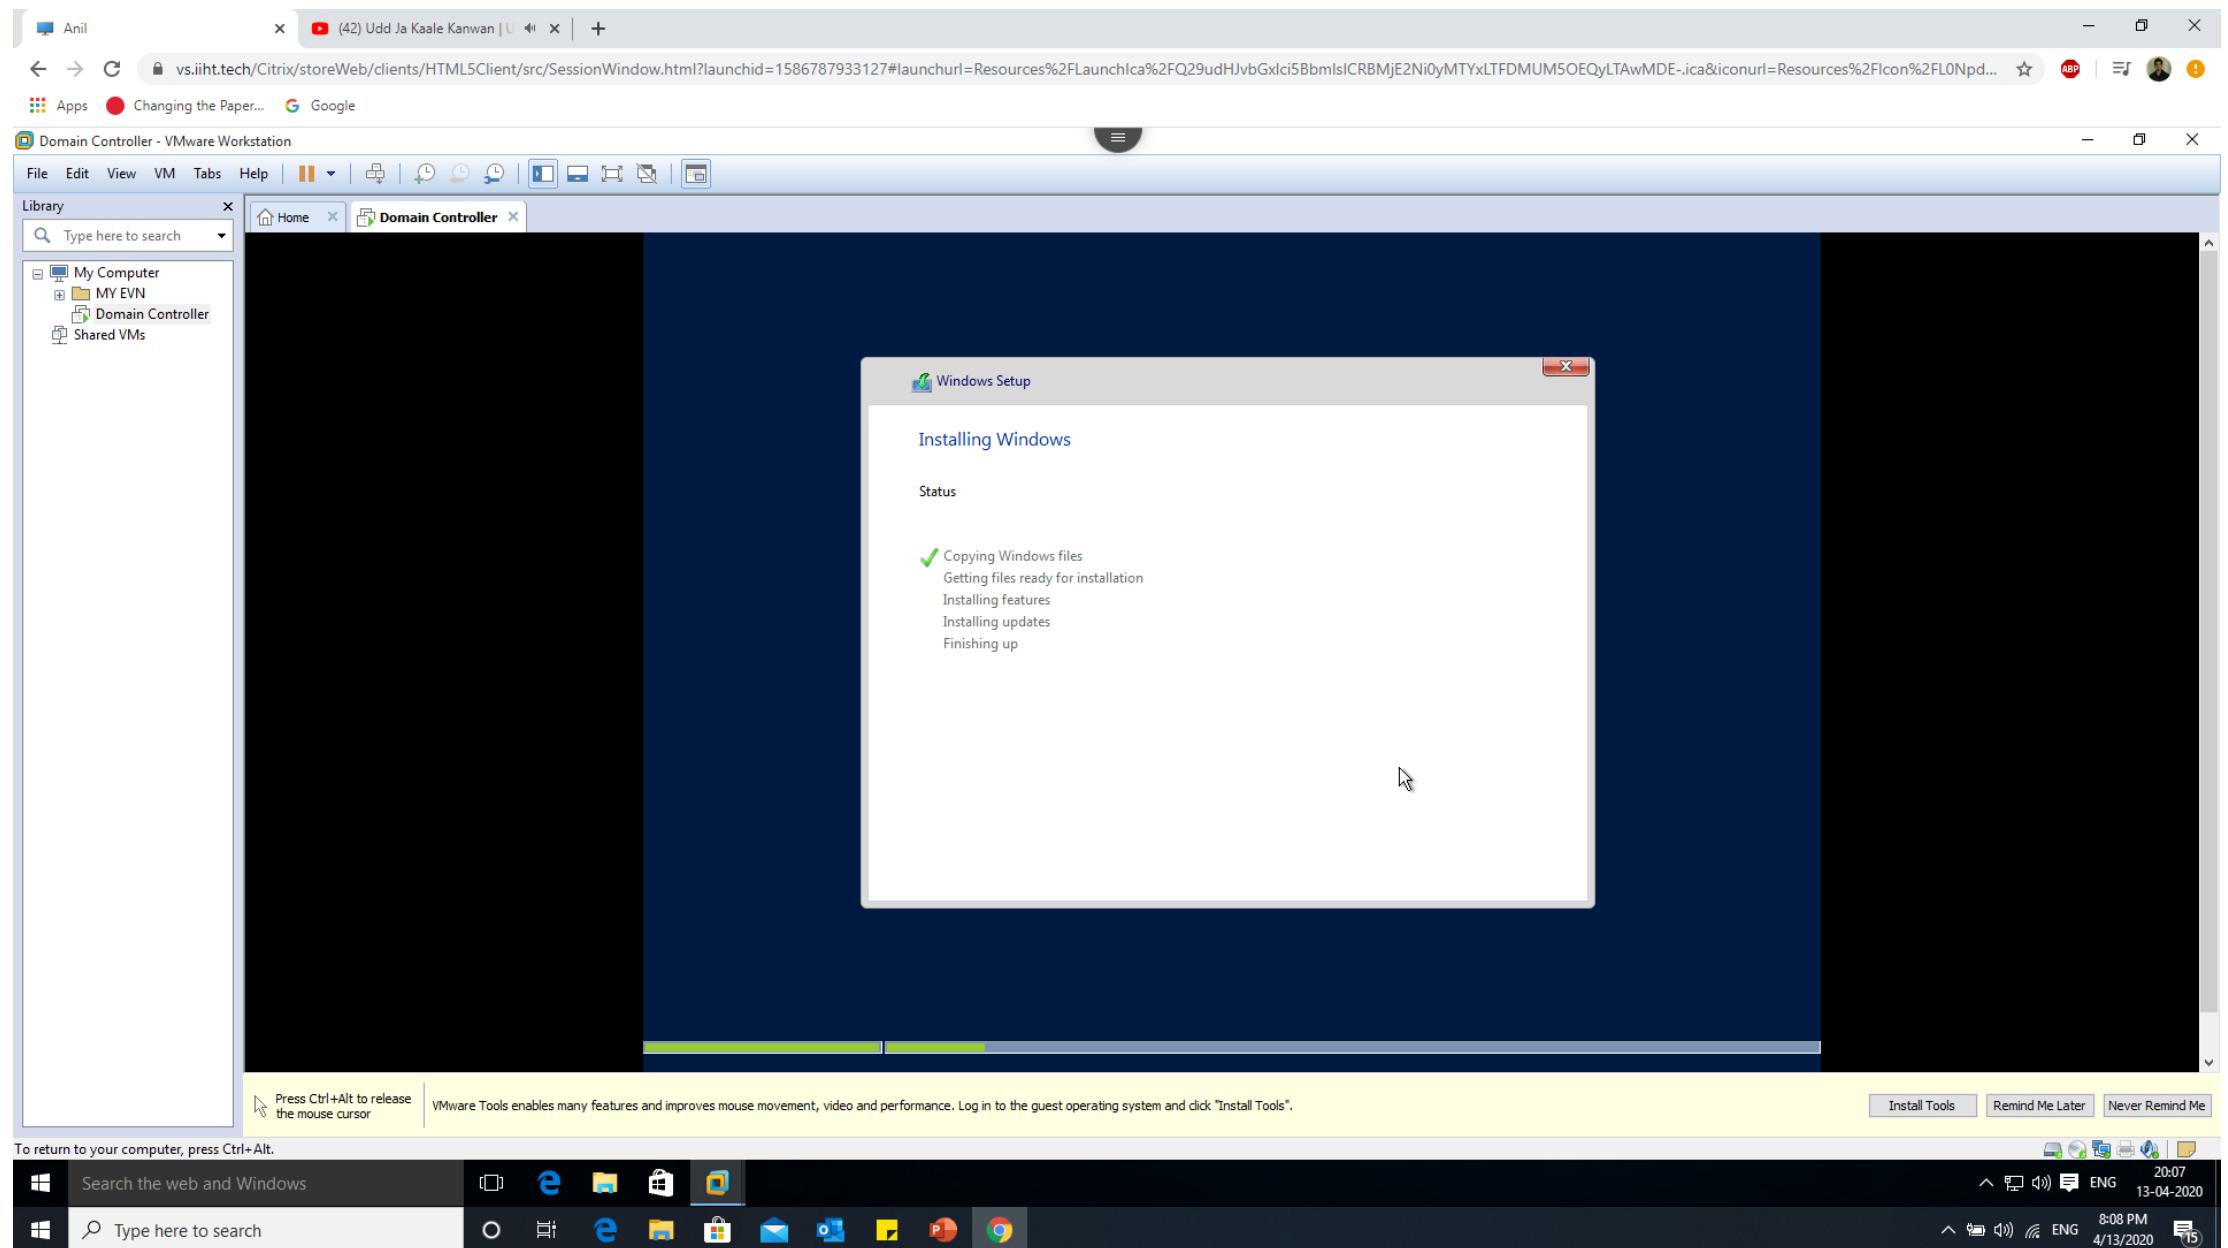

NOTE: Partitions can be created at a later stage as well. Choice is yours.

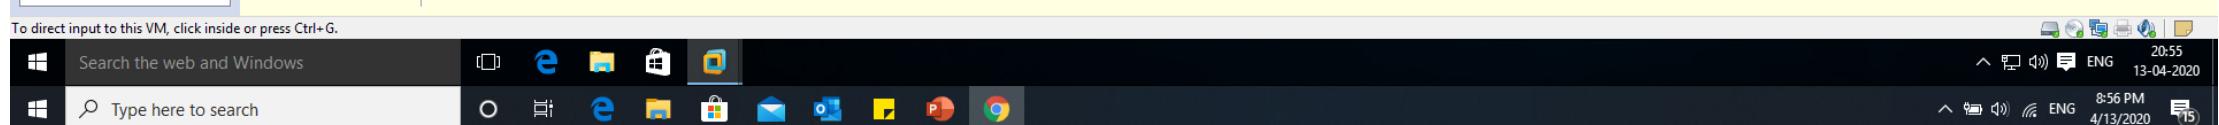

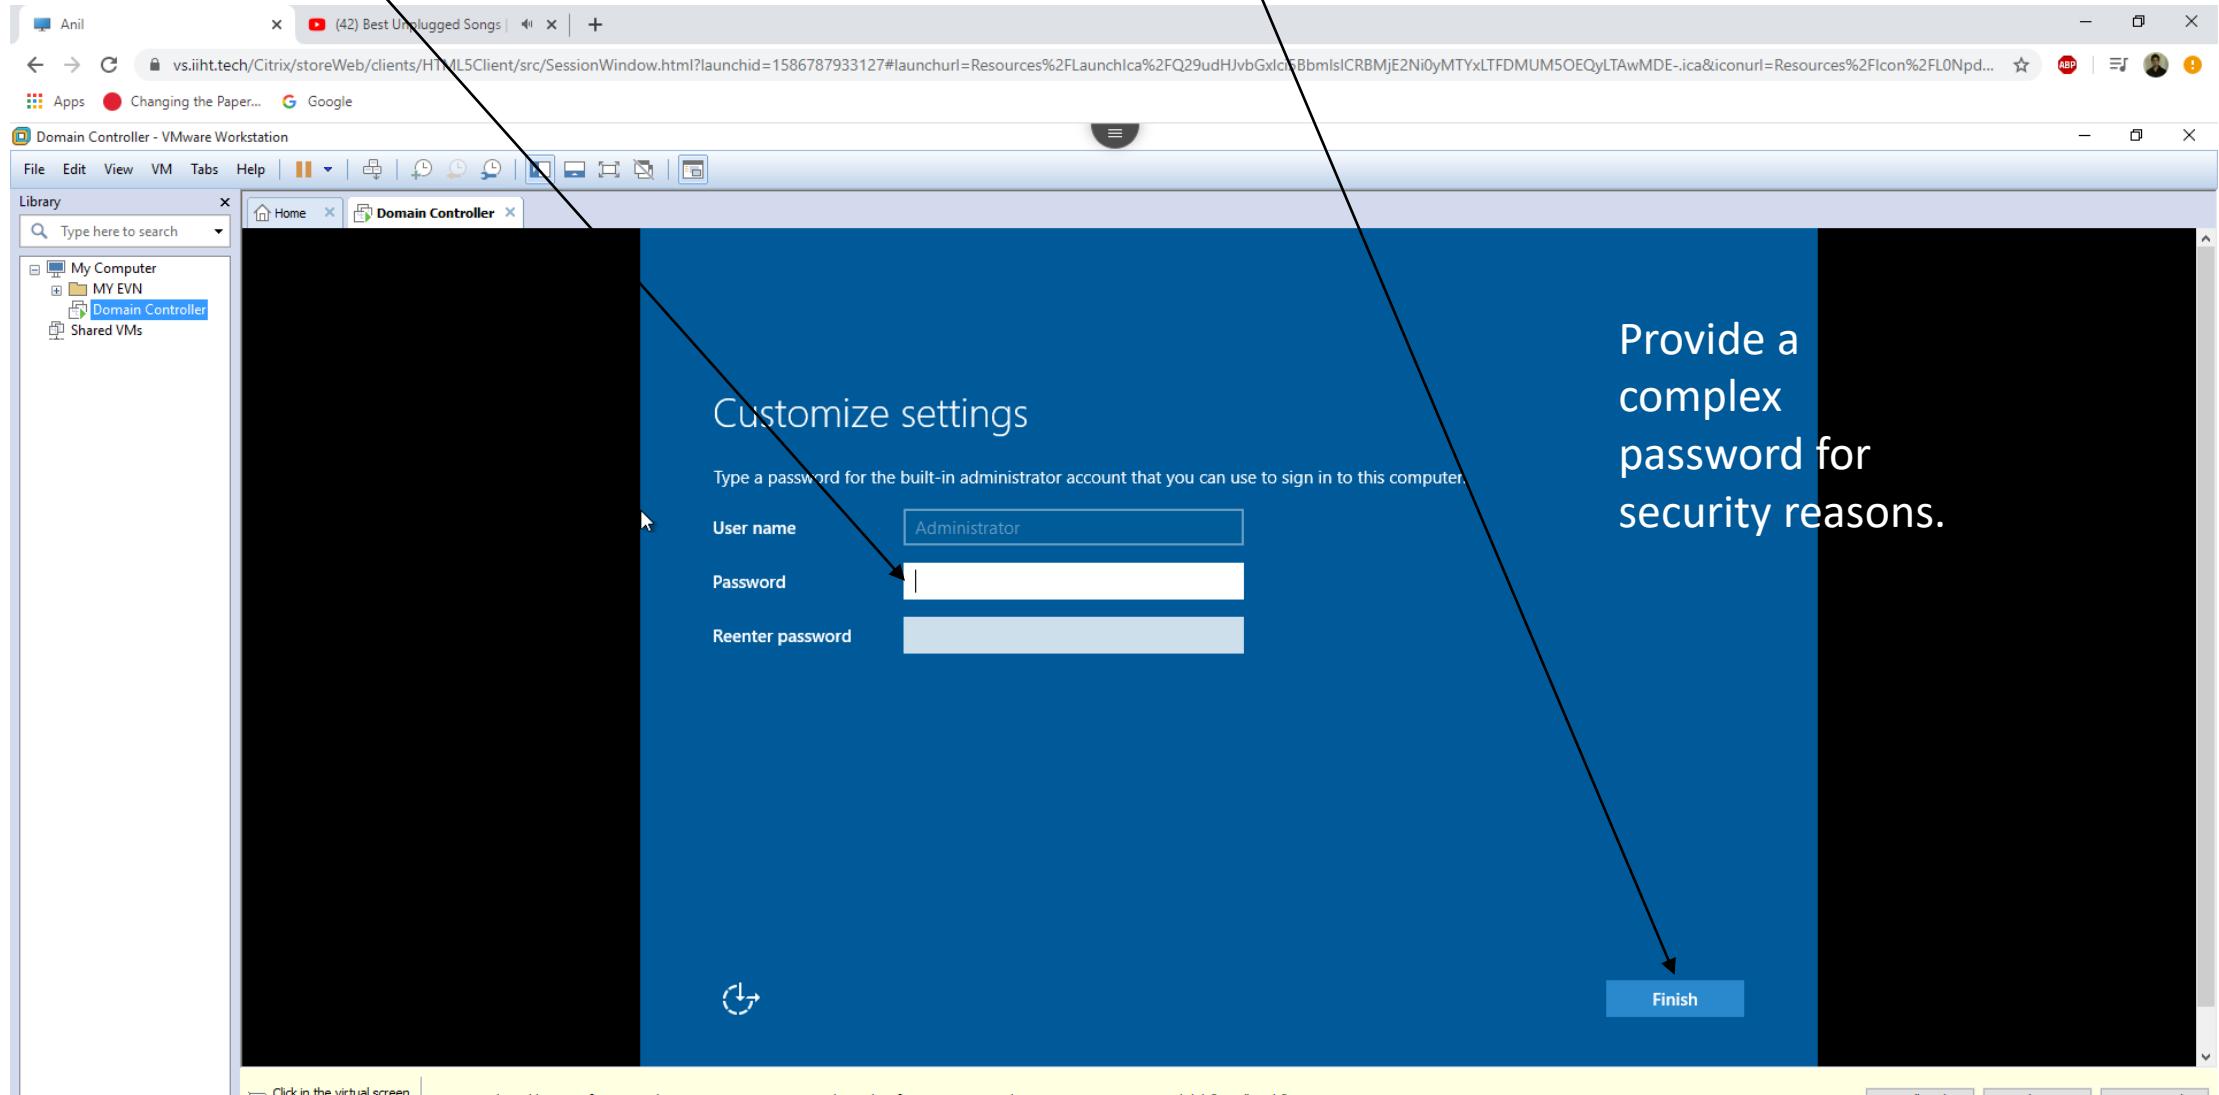

To return to your computer, press Ctrl+Alt.

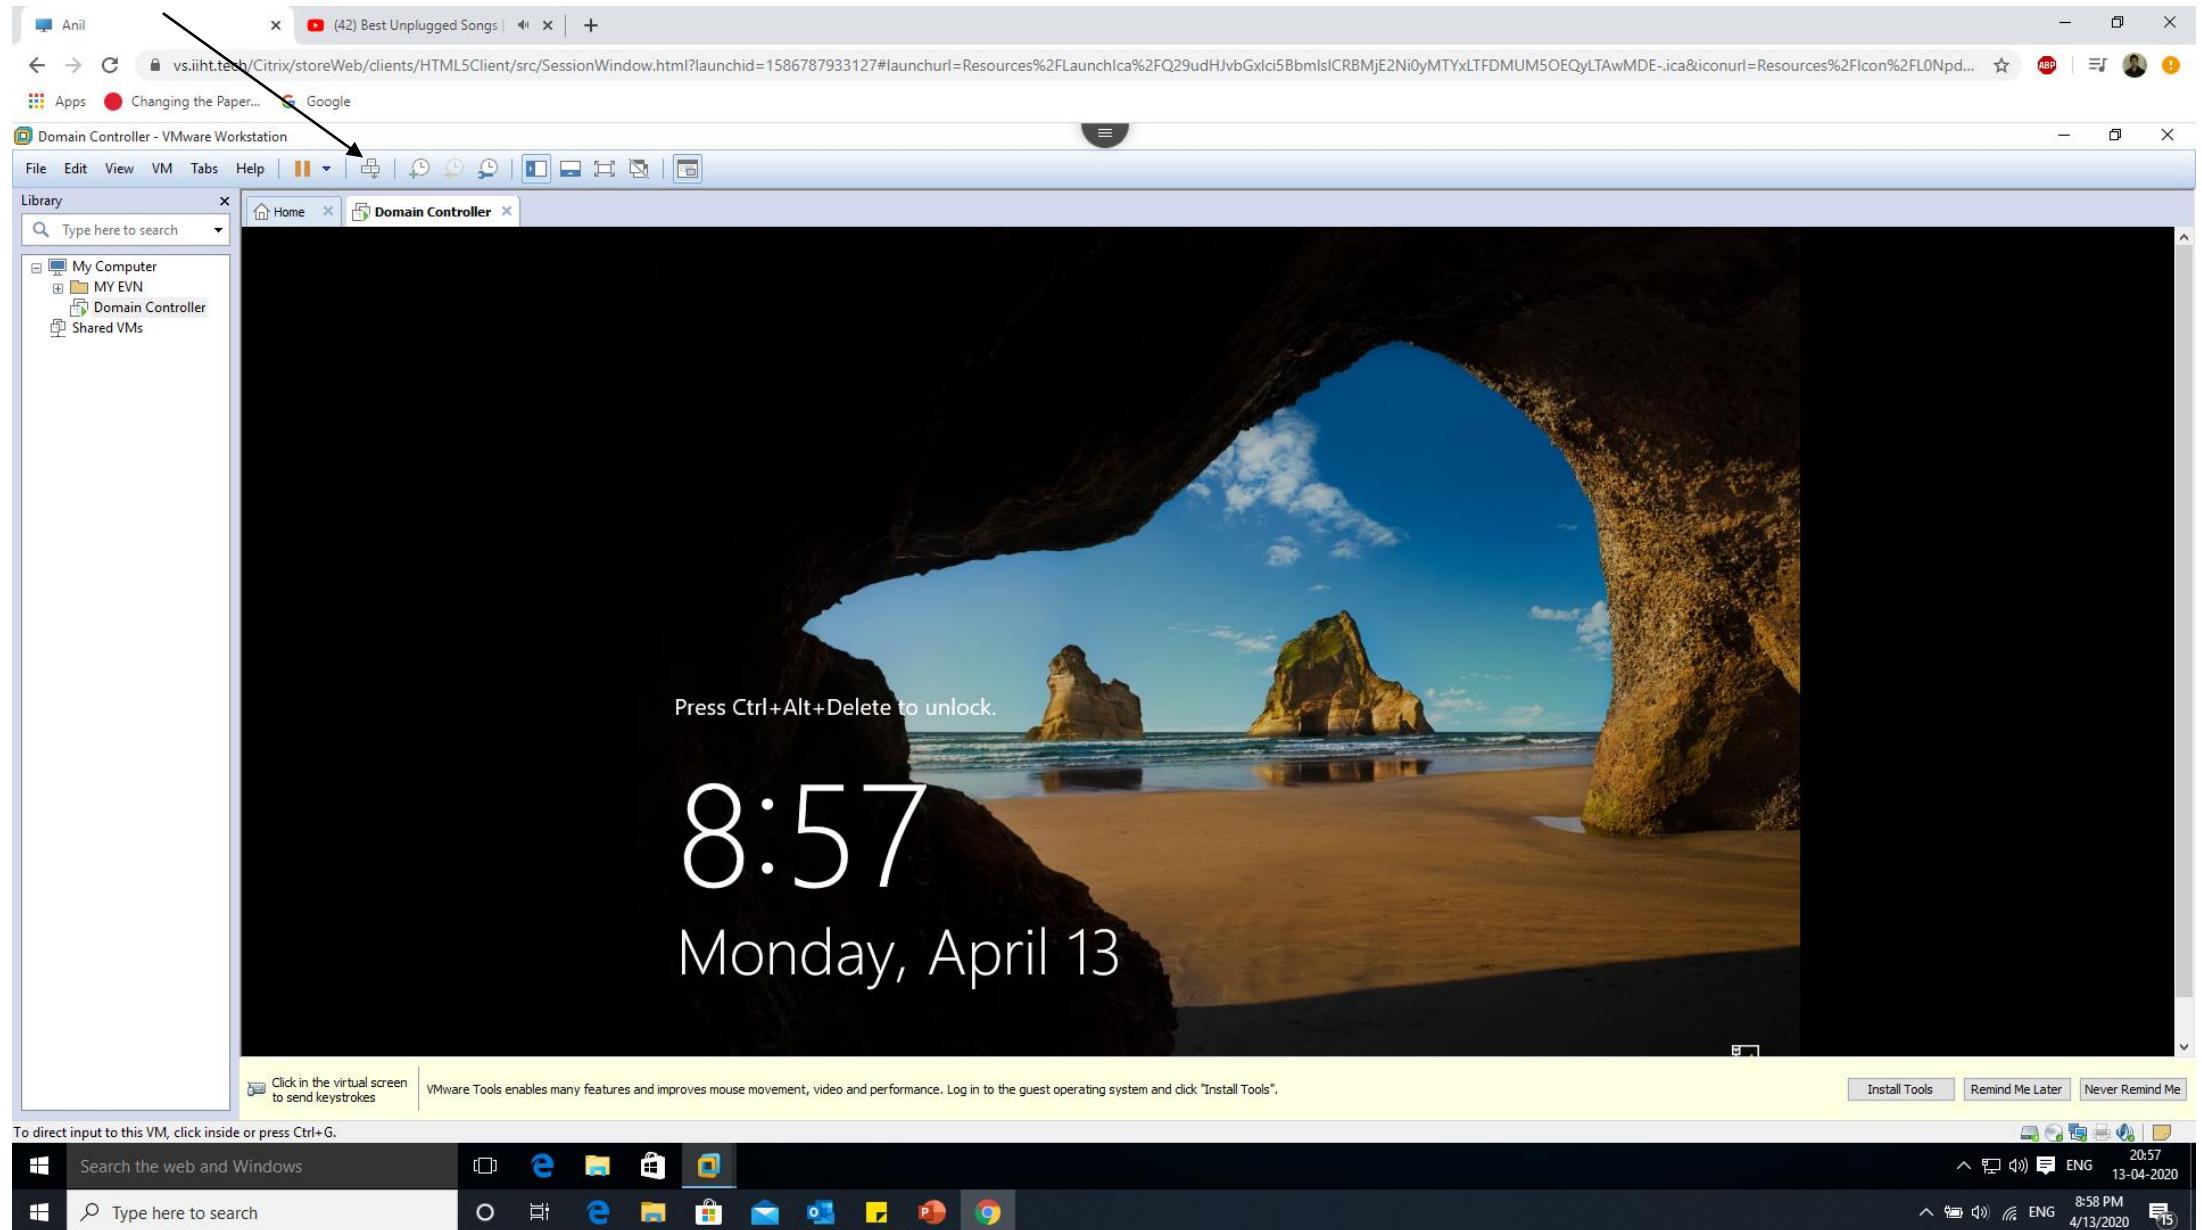

Installation starts

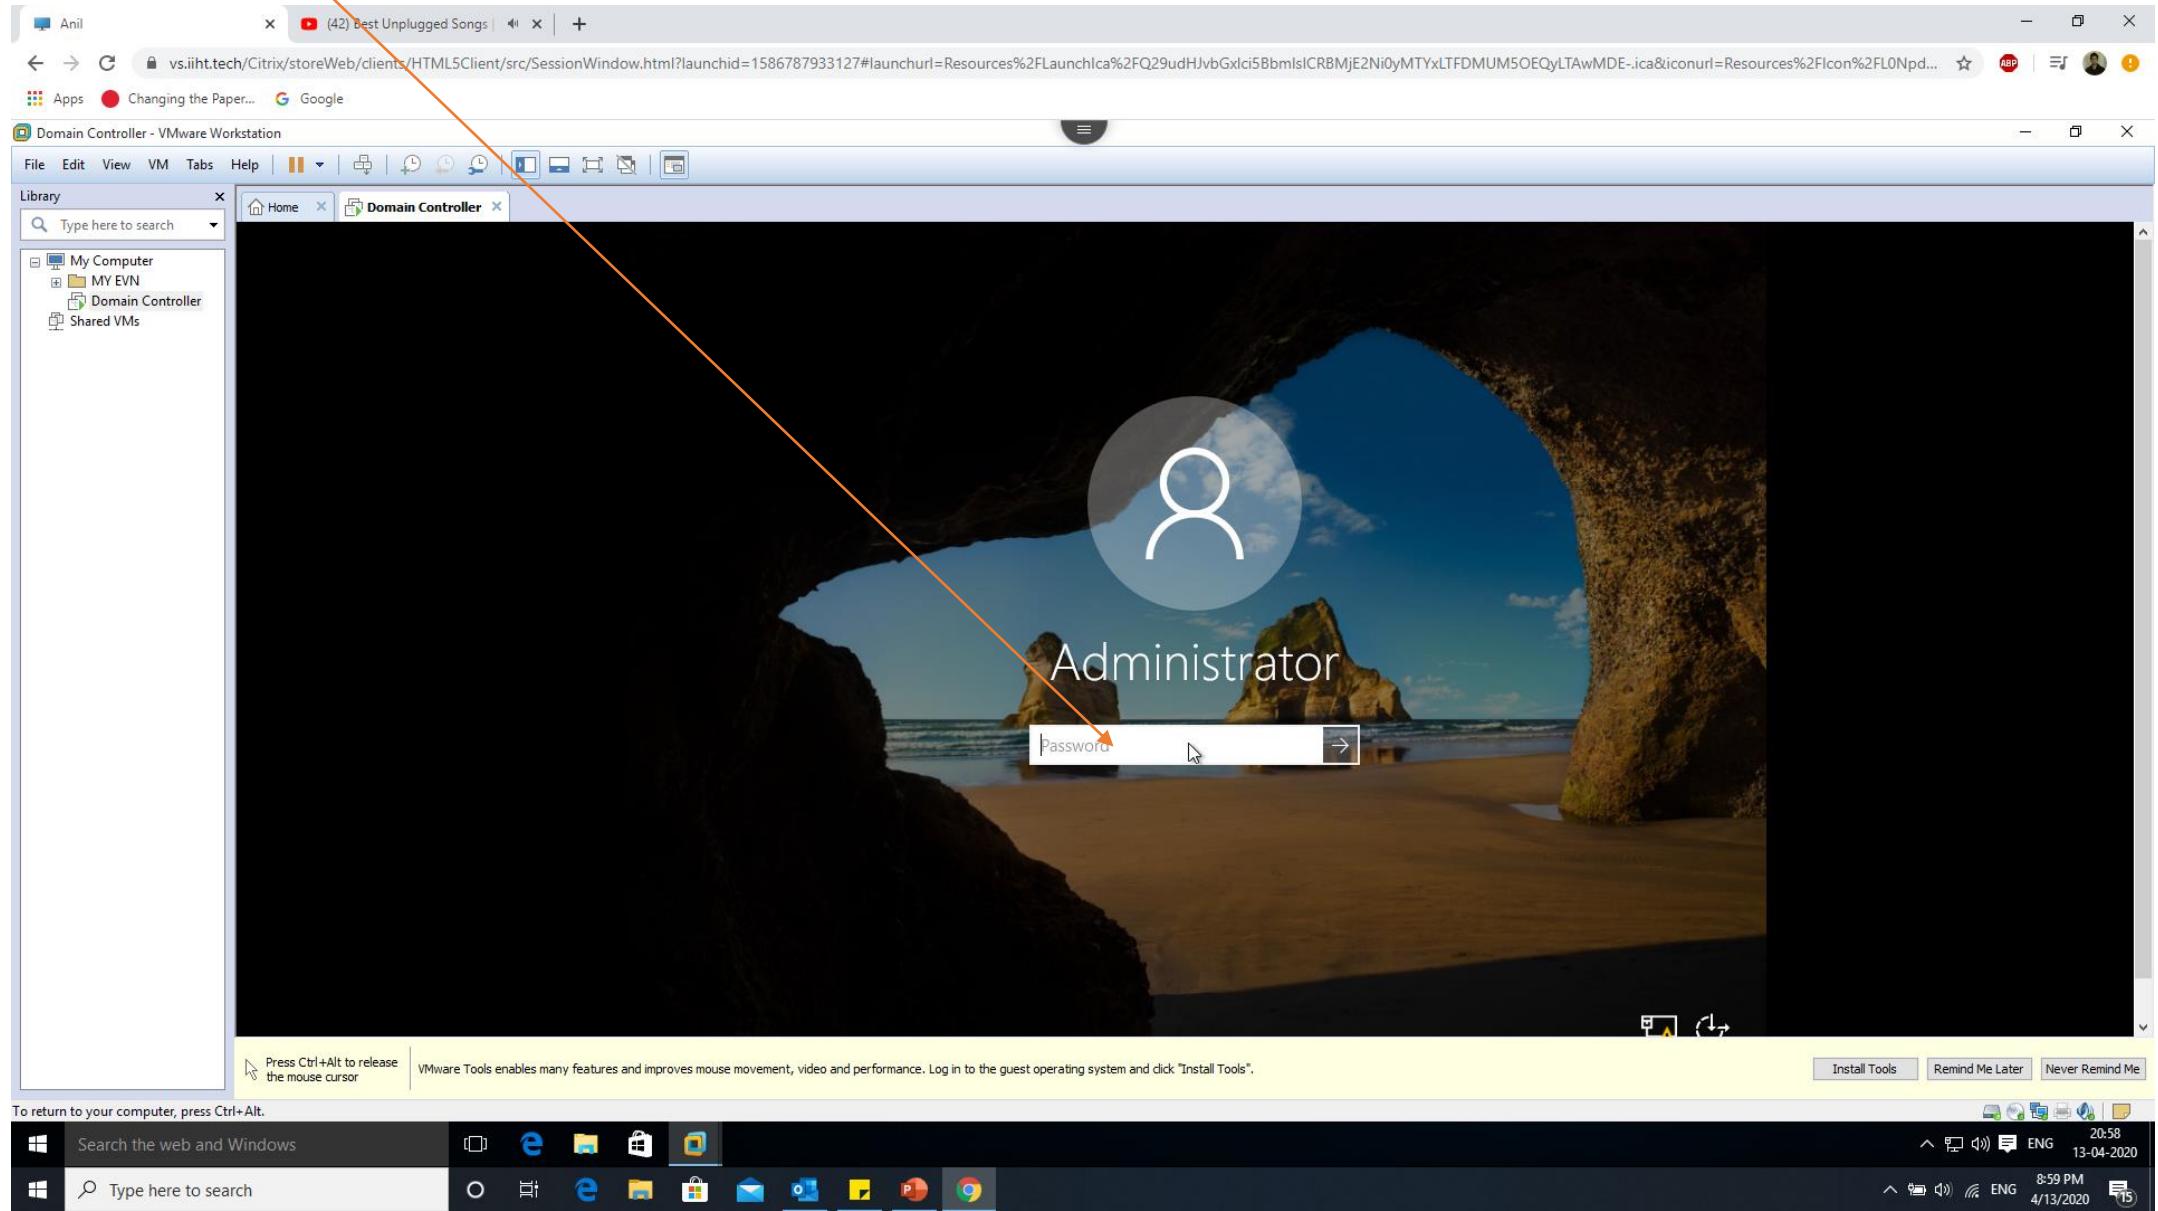

Post installation provide the administrator's password and click on finish

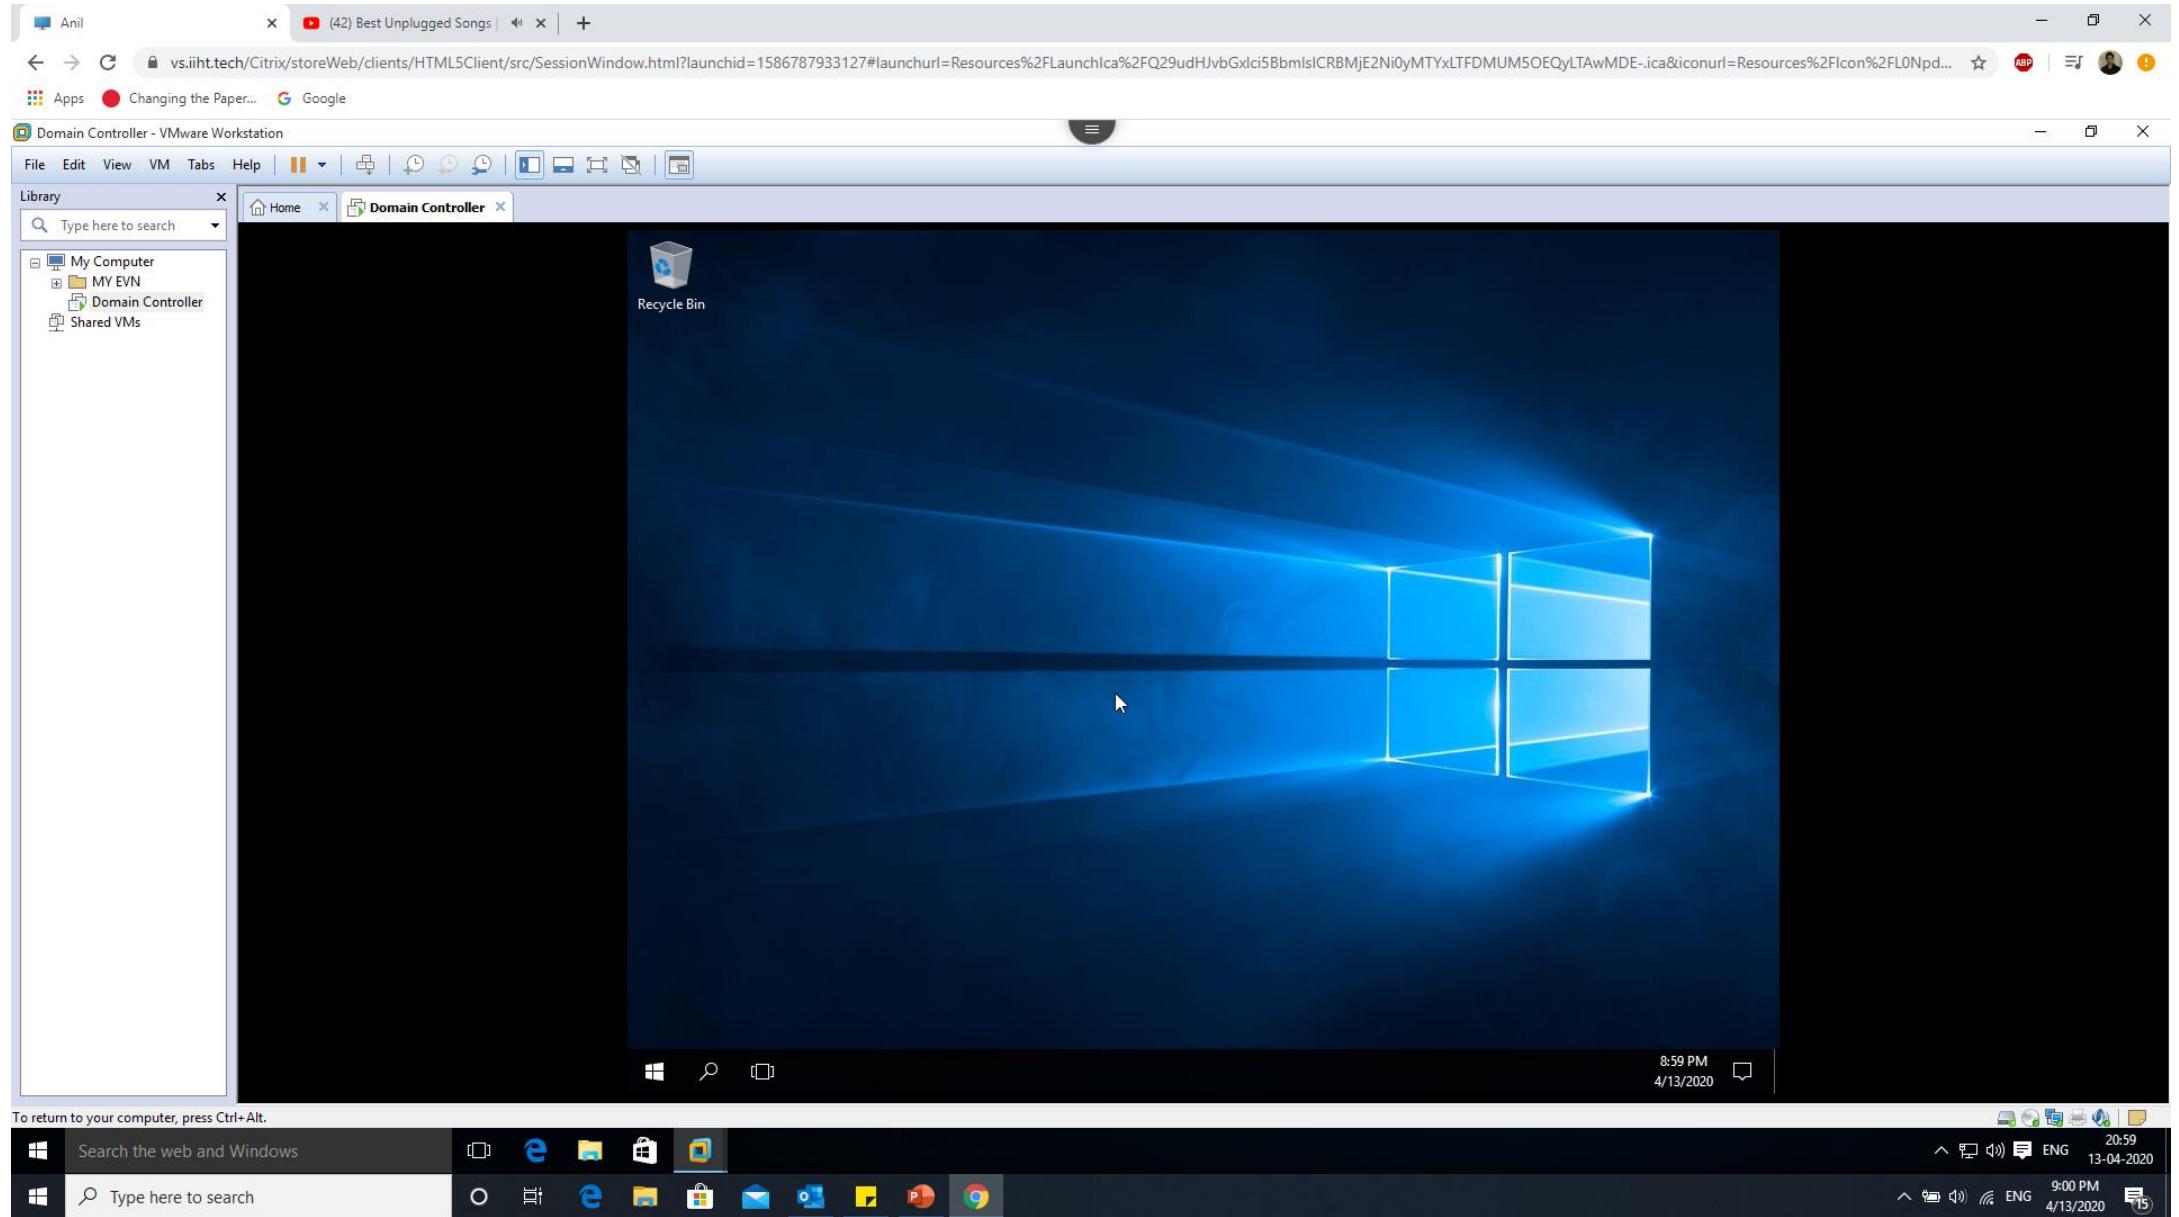

Click **ctrl+Alt+del** for login.

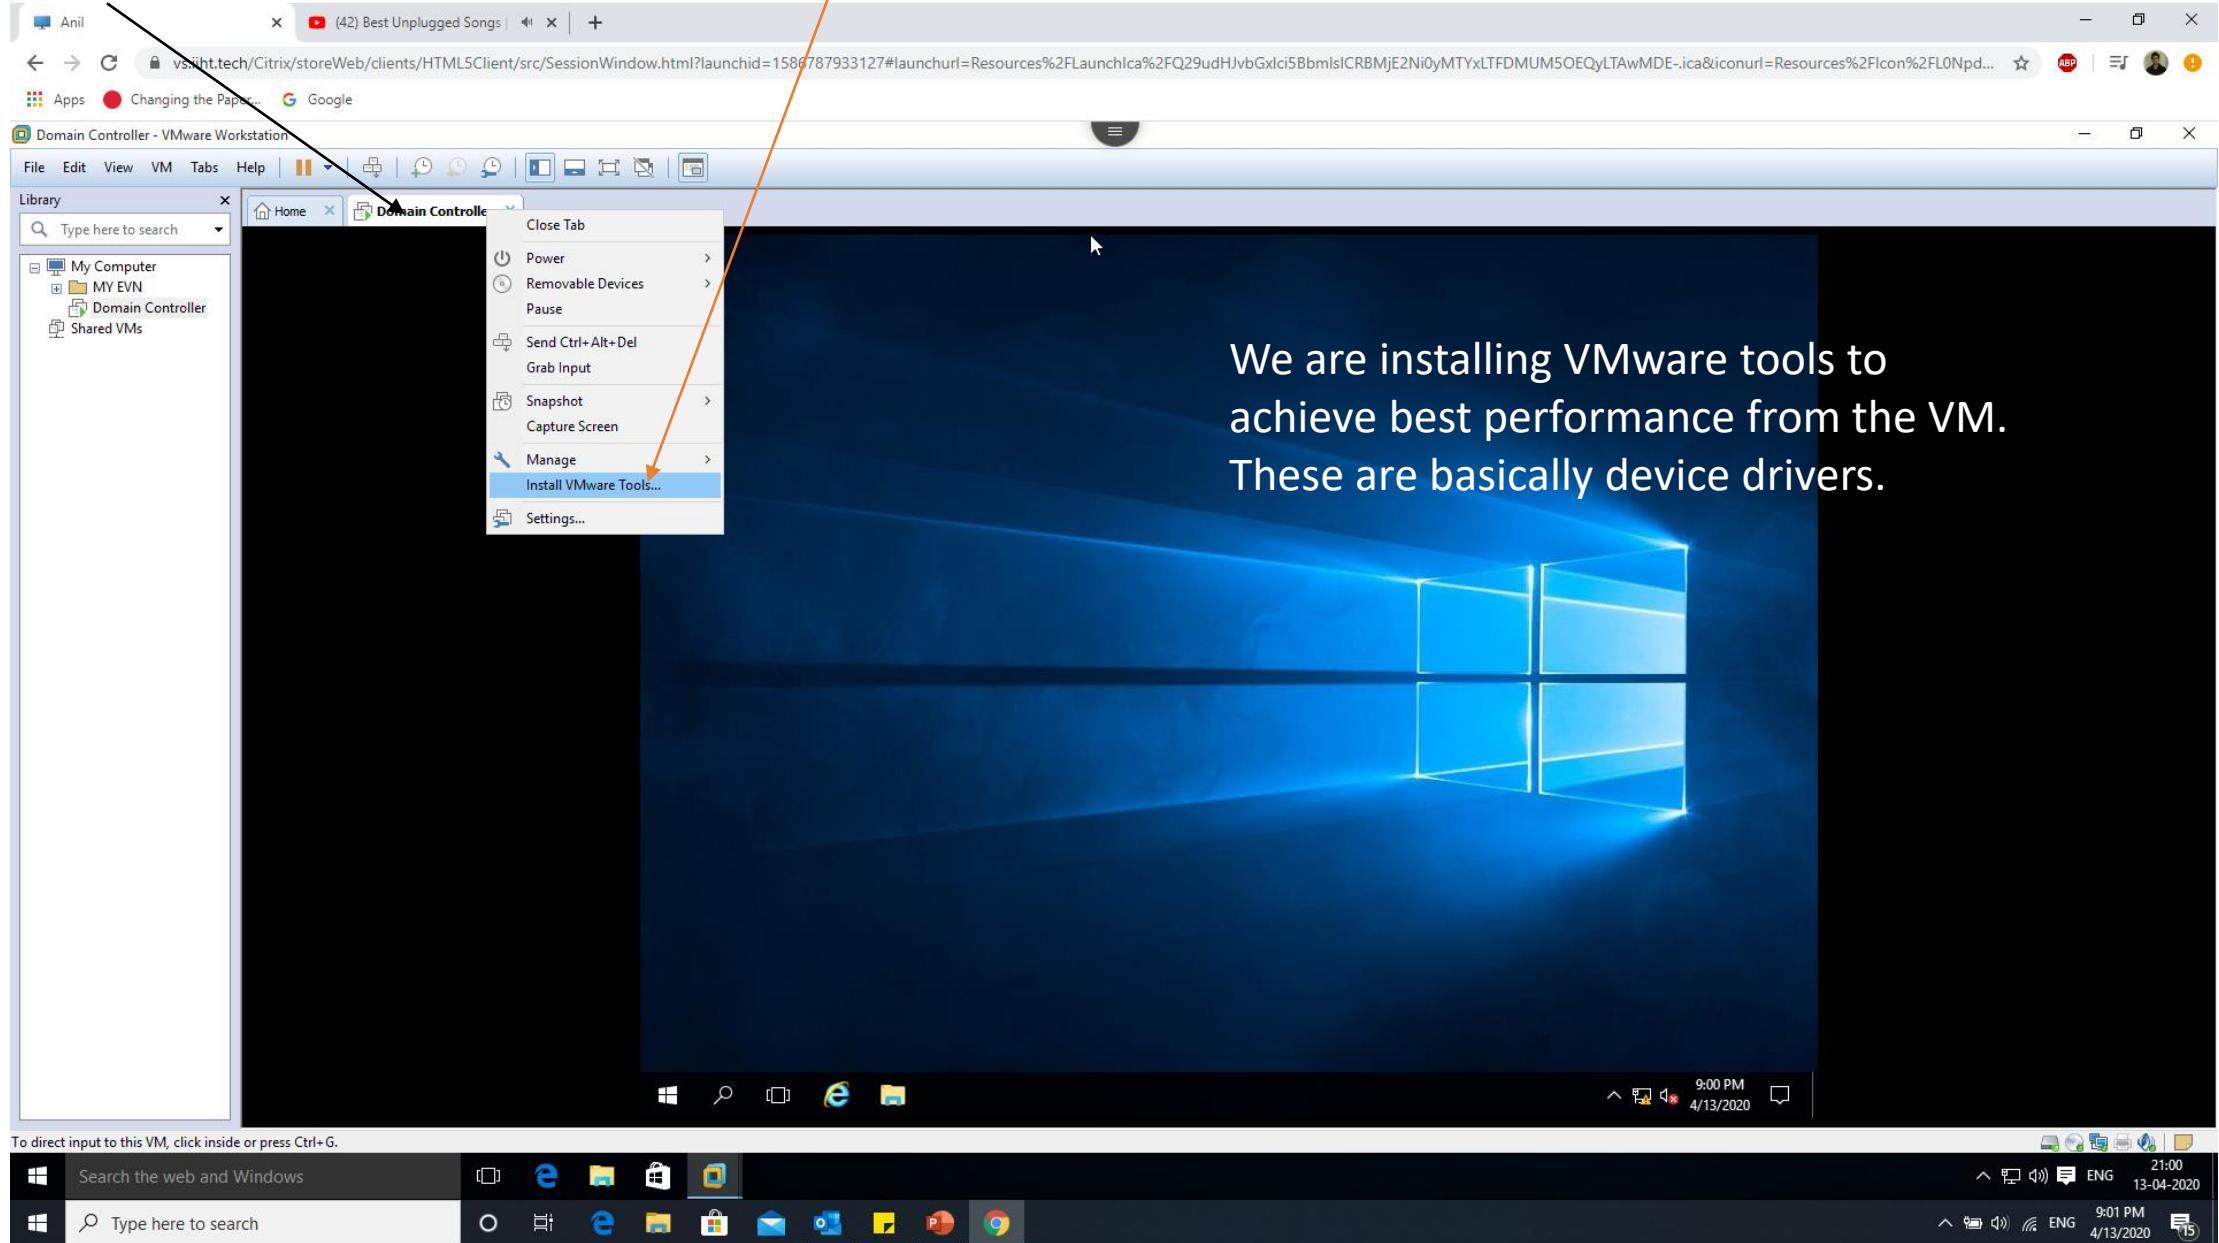

Provide the password that you have provided in previous step.

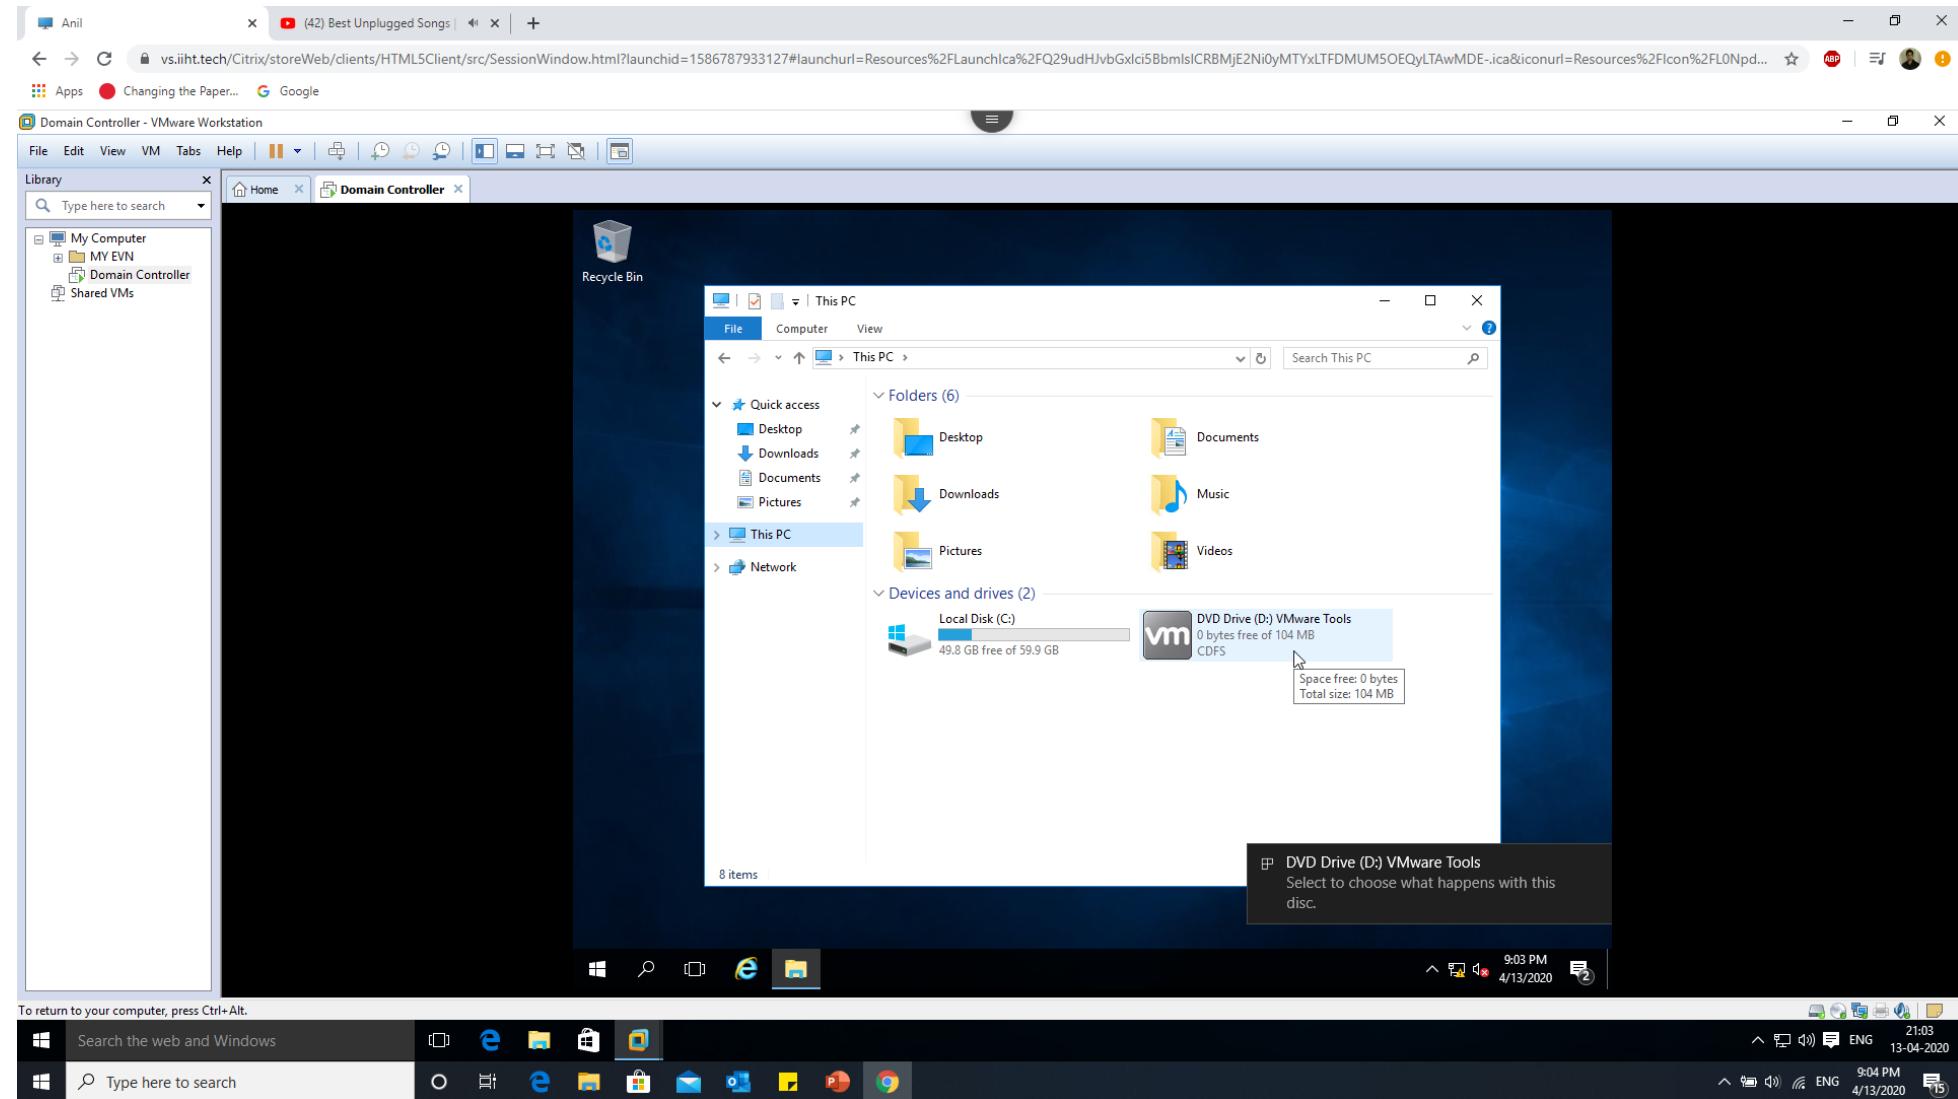

Operating system installation is successful

Right click on VM name and click on Install VMware tools

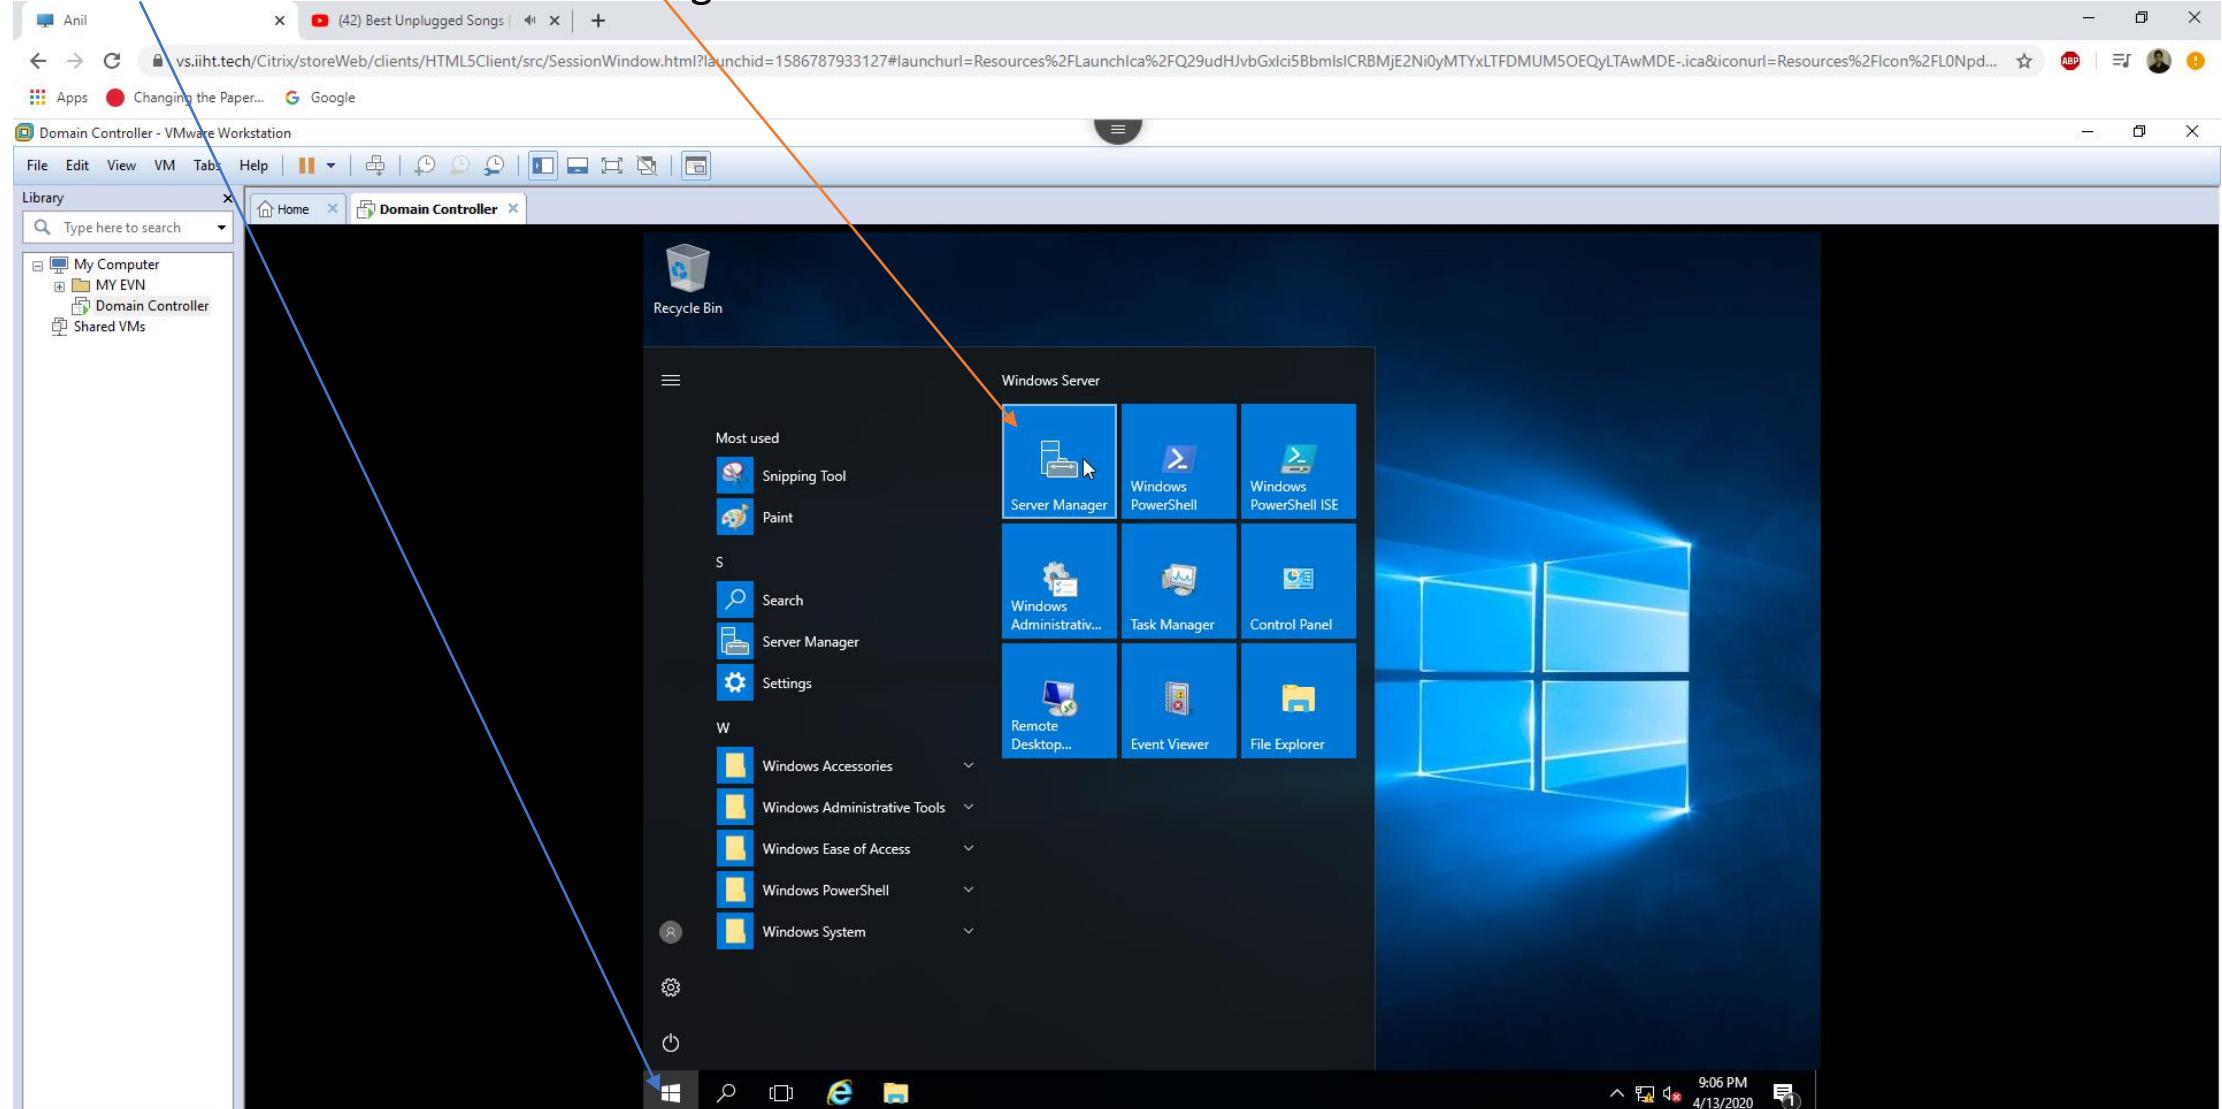

Open This PC and double click on D: drive. Follow the steps of installation. Post installation the VM will ask for a reboot, simply click on reboot

TASK 2:

We do not use machines with default name in production, so lets provide our machine a convenient name.

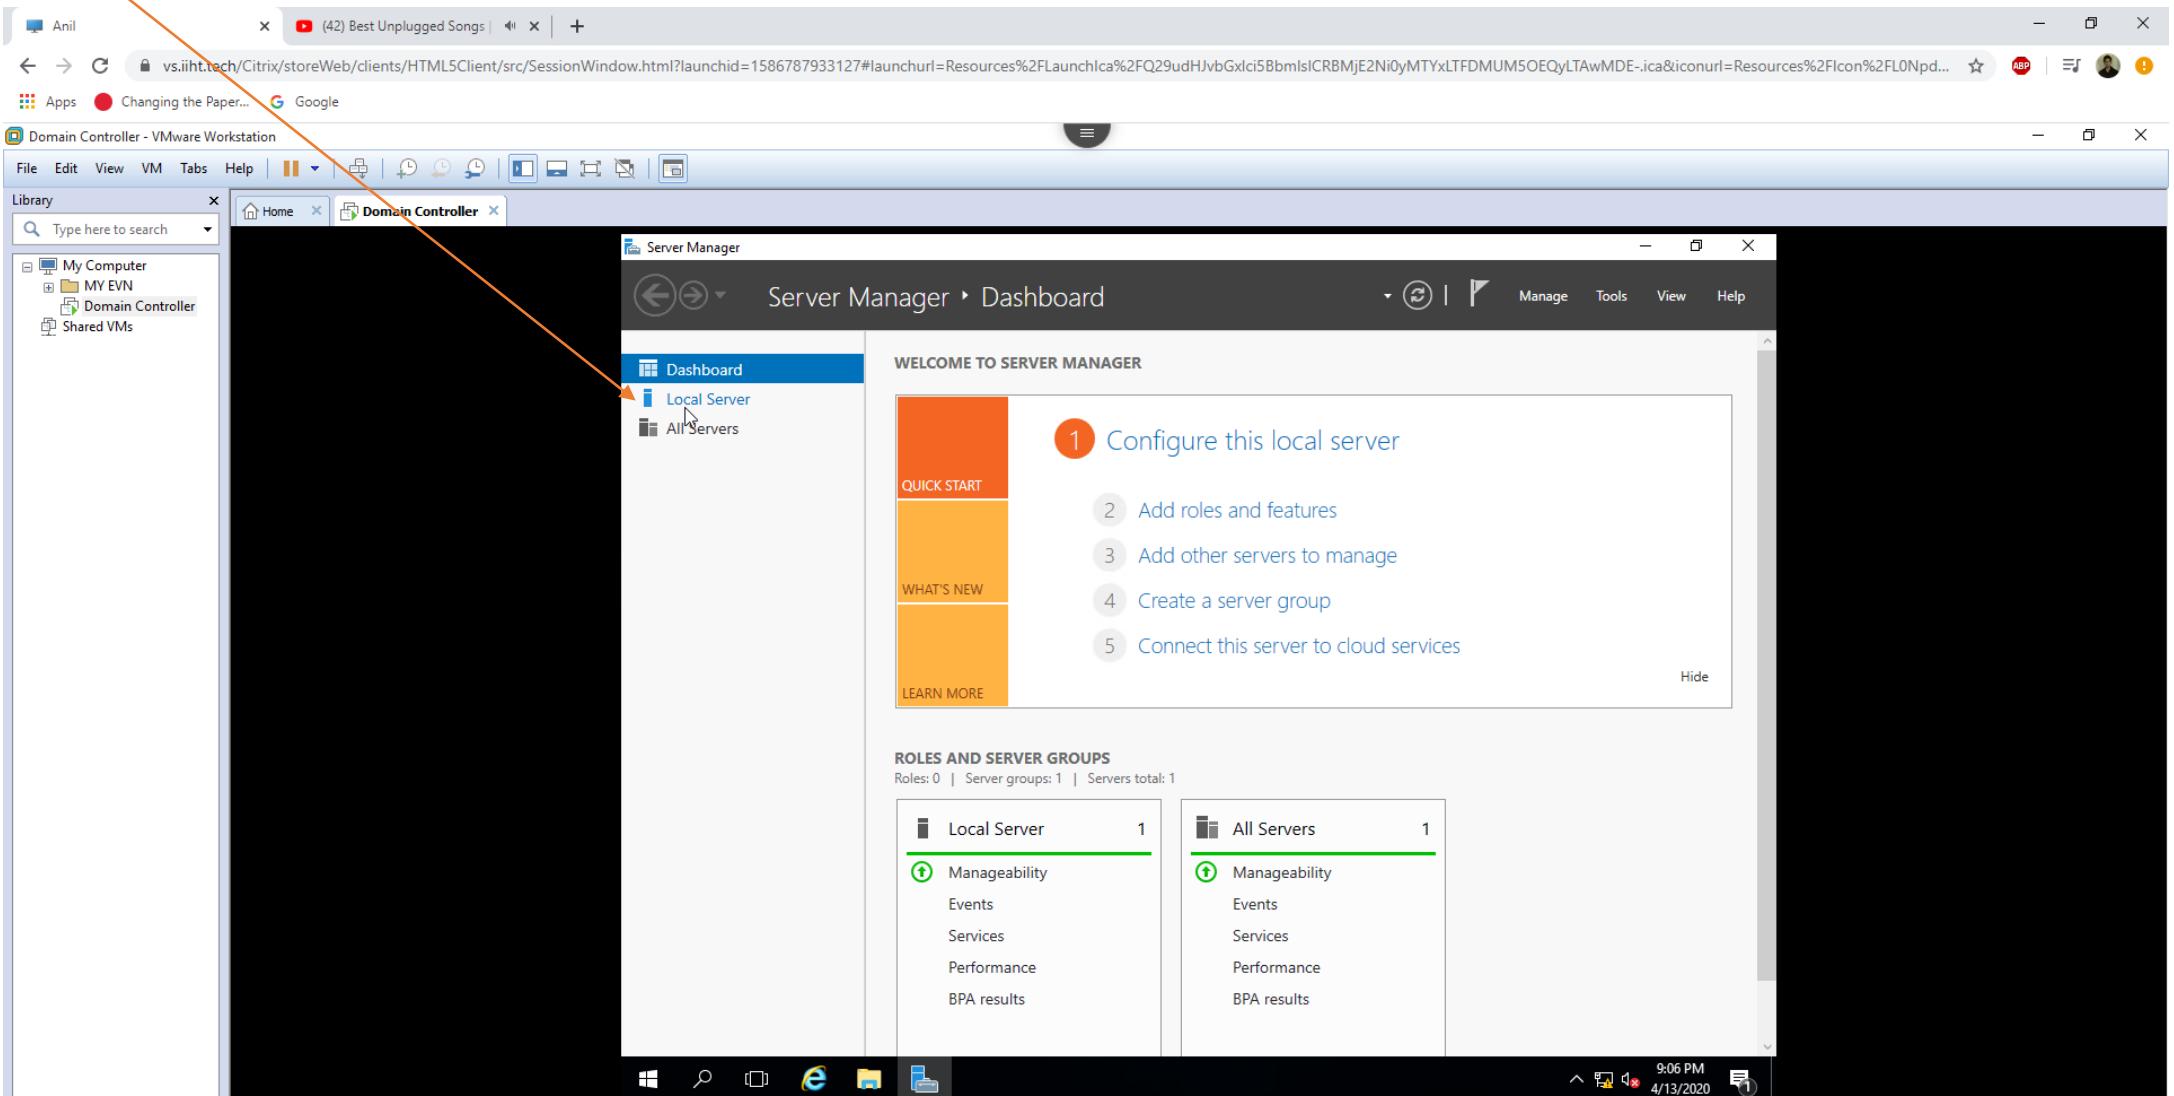

Click on start and click on server manager

To return to your computer, press Ctrl+Alt.

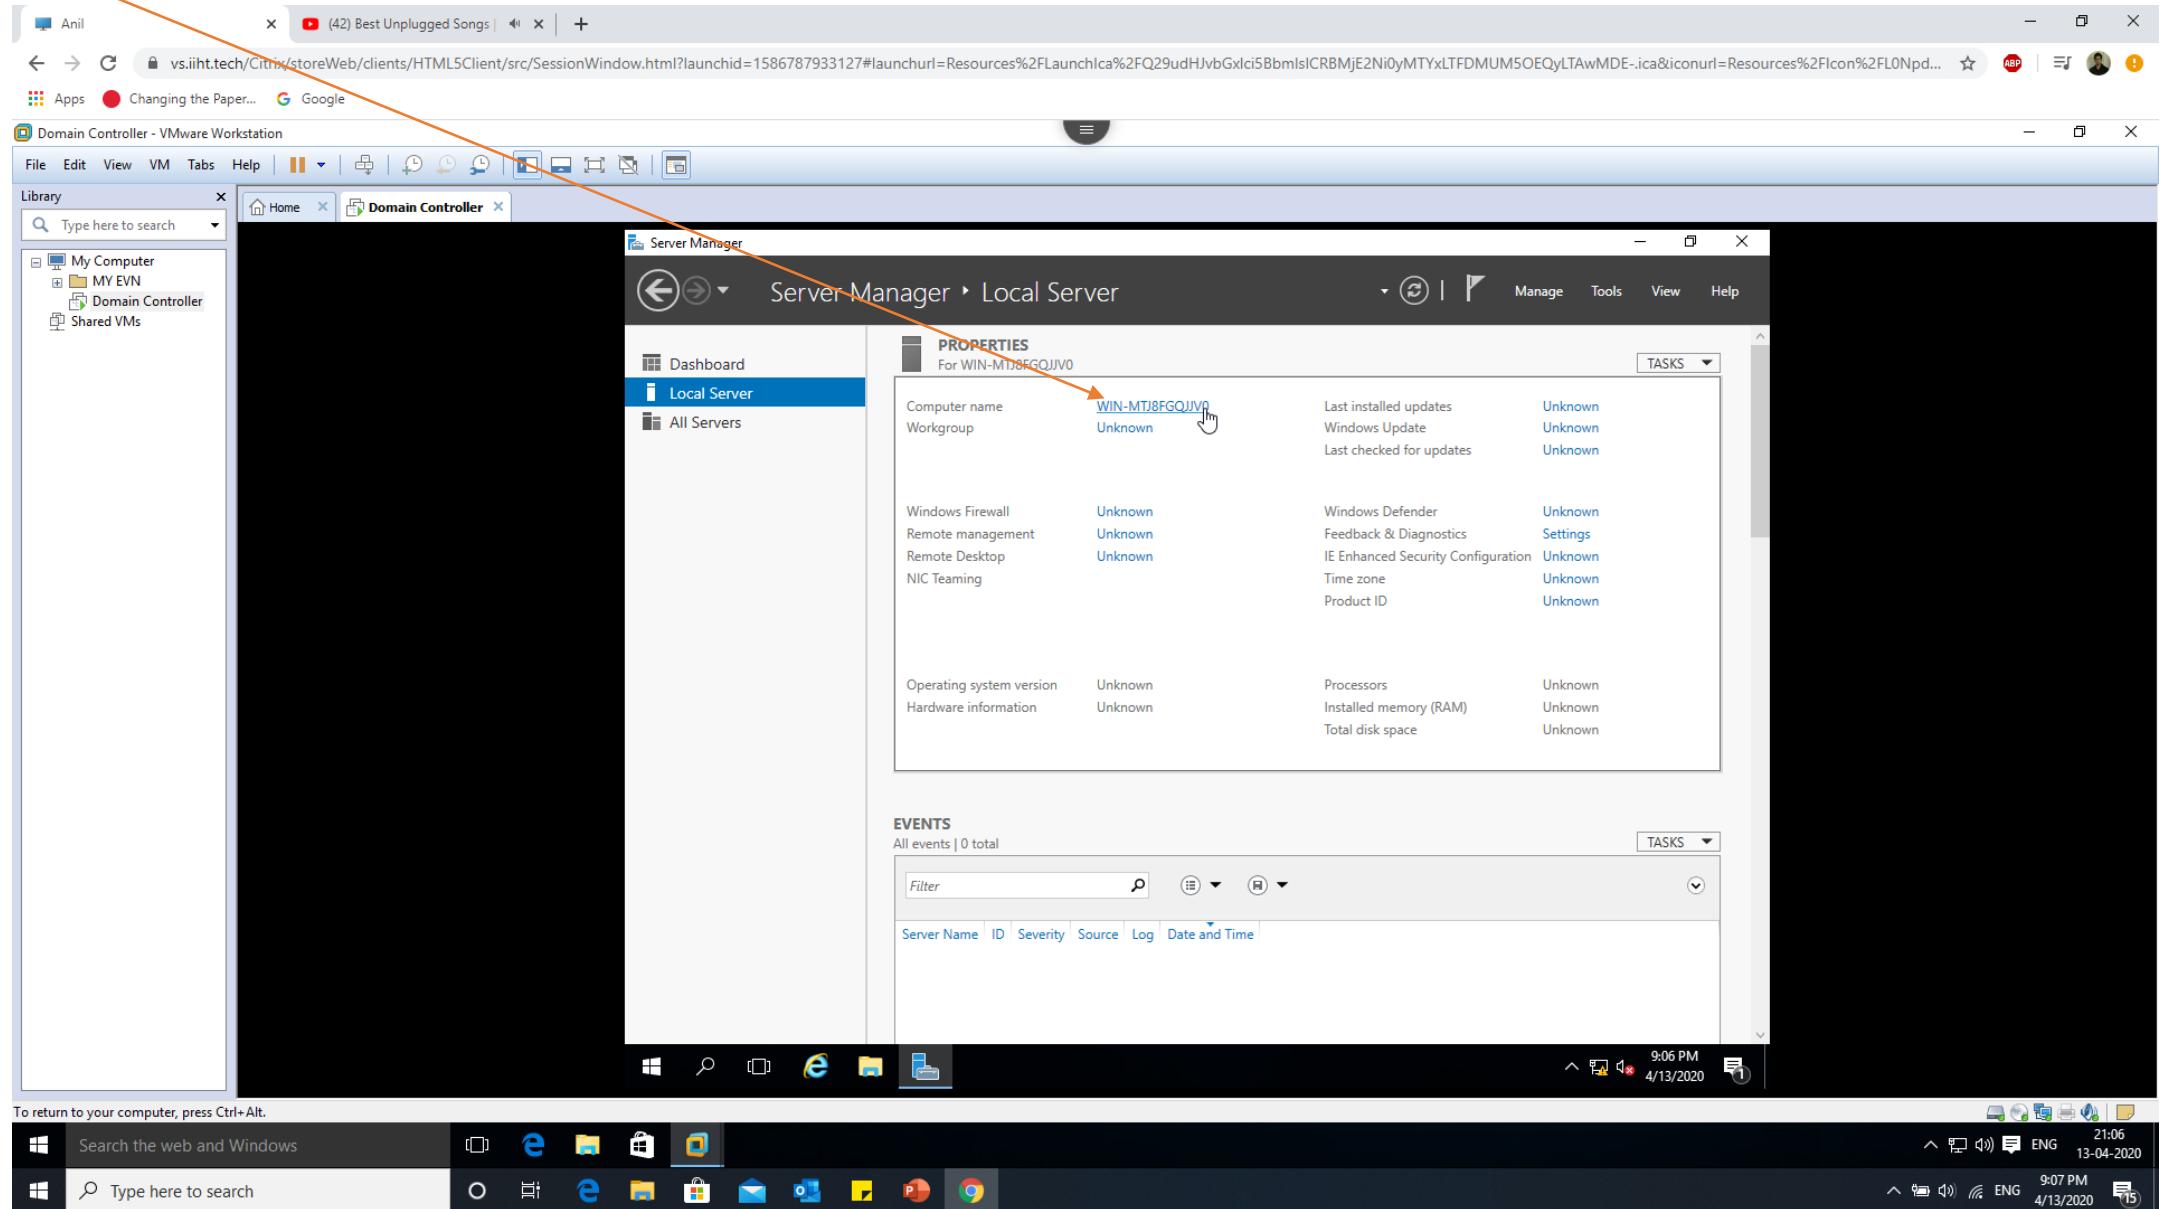

Click on Local server

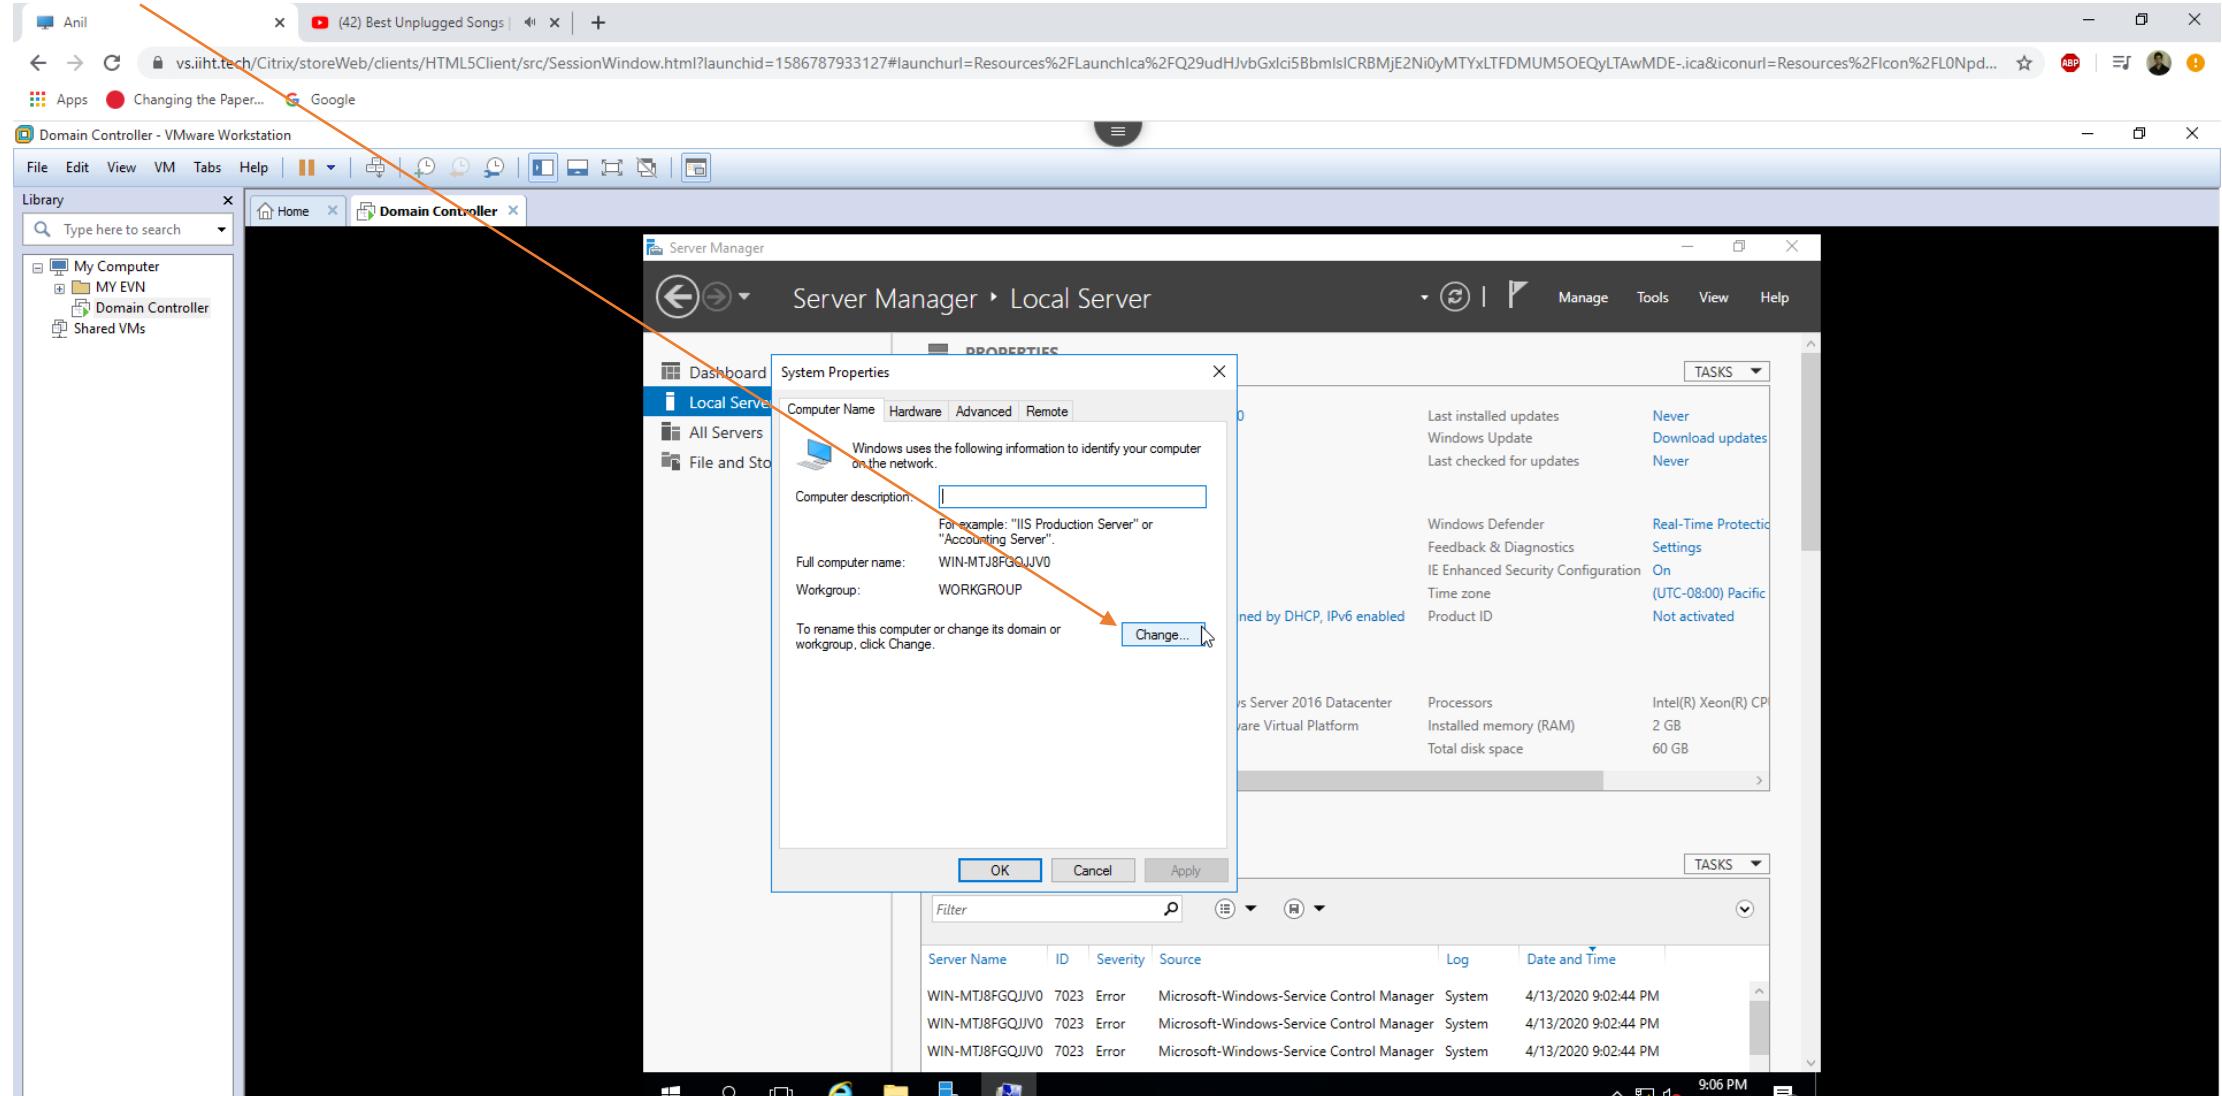

To return to your computer, press Ctrl+Alt.

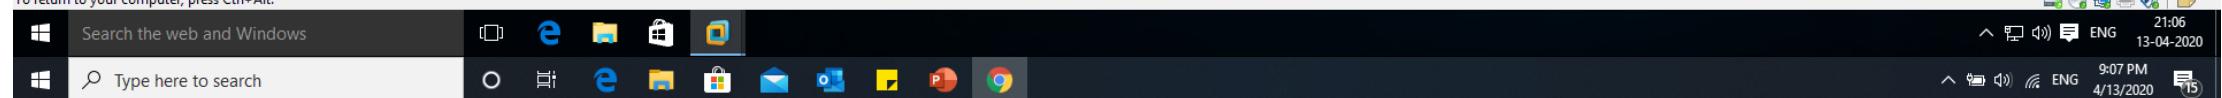

Click on computer name

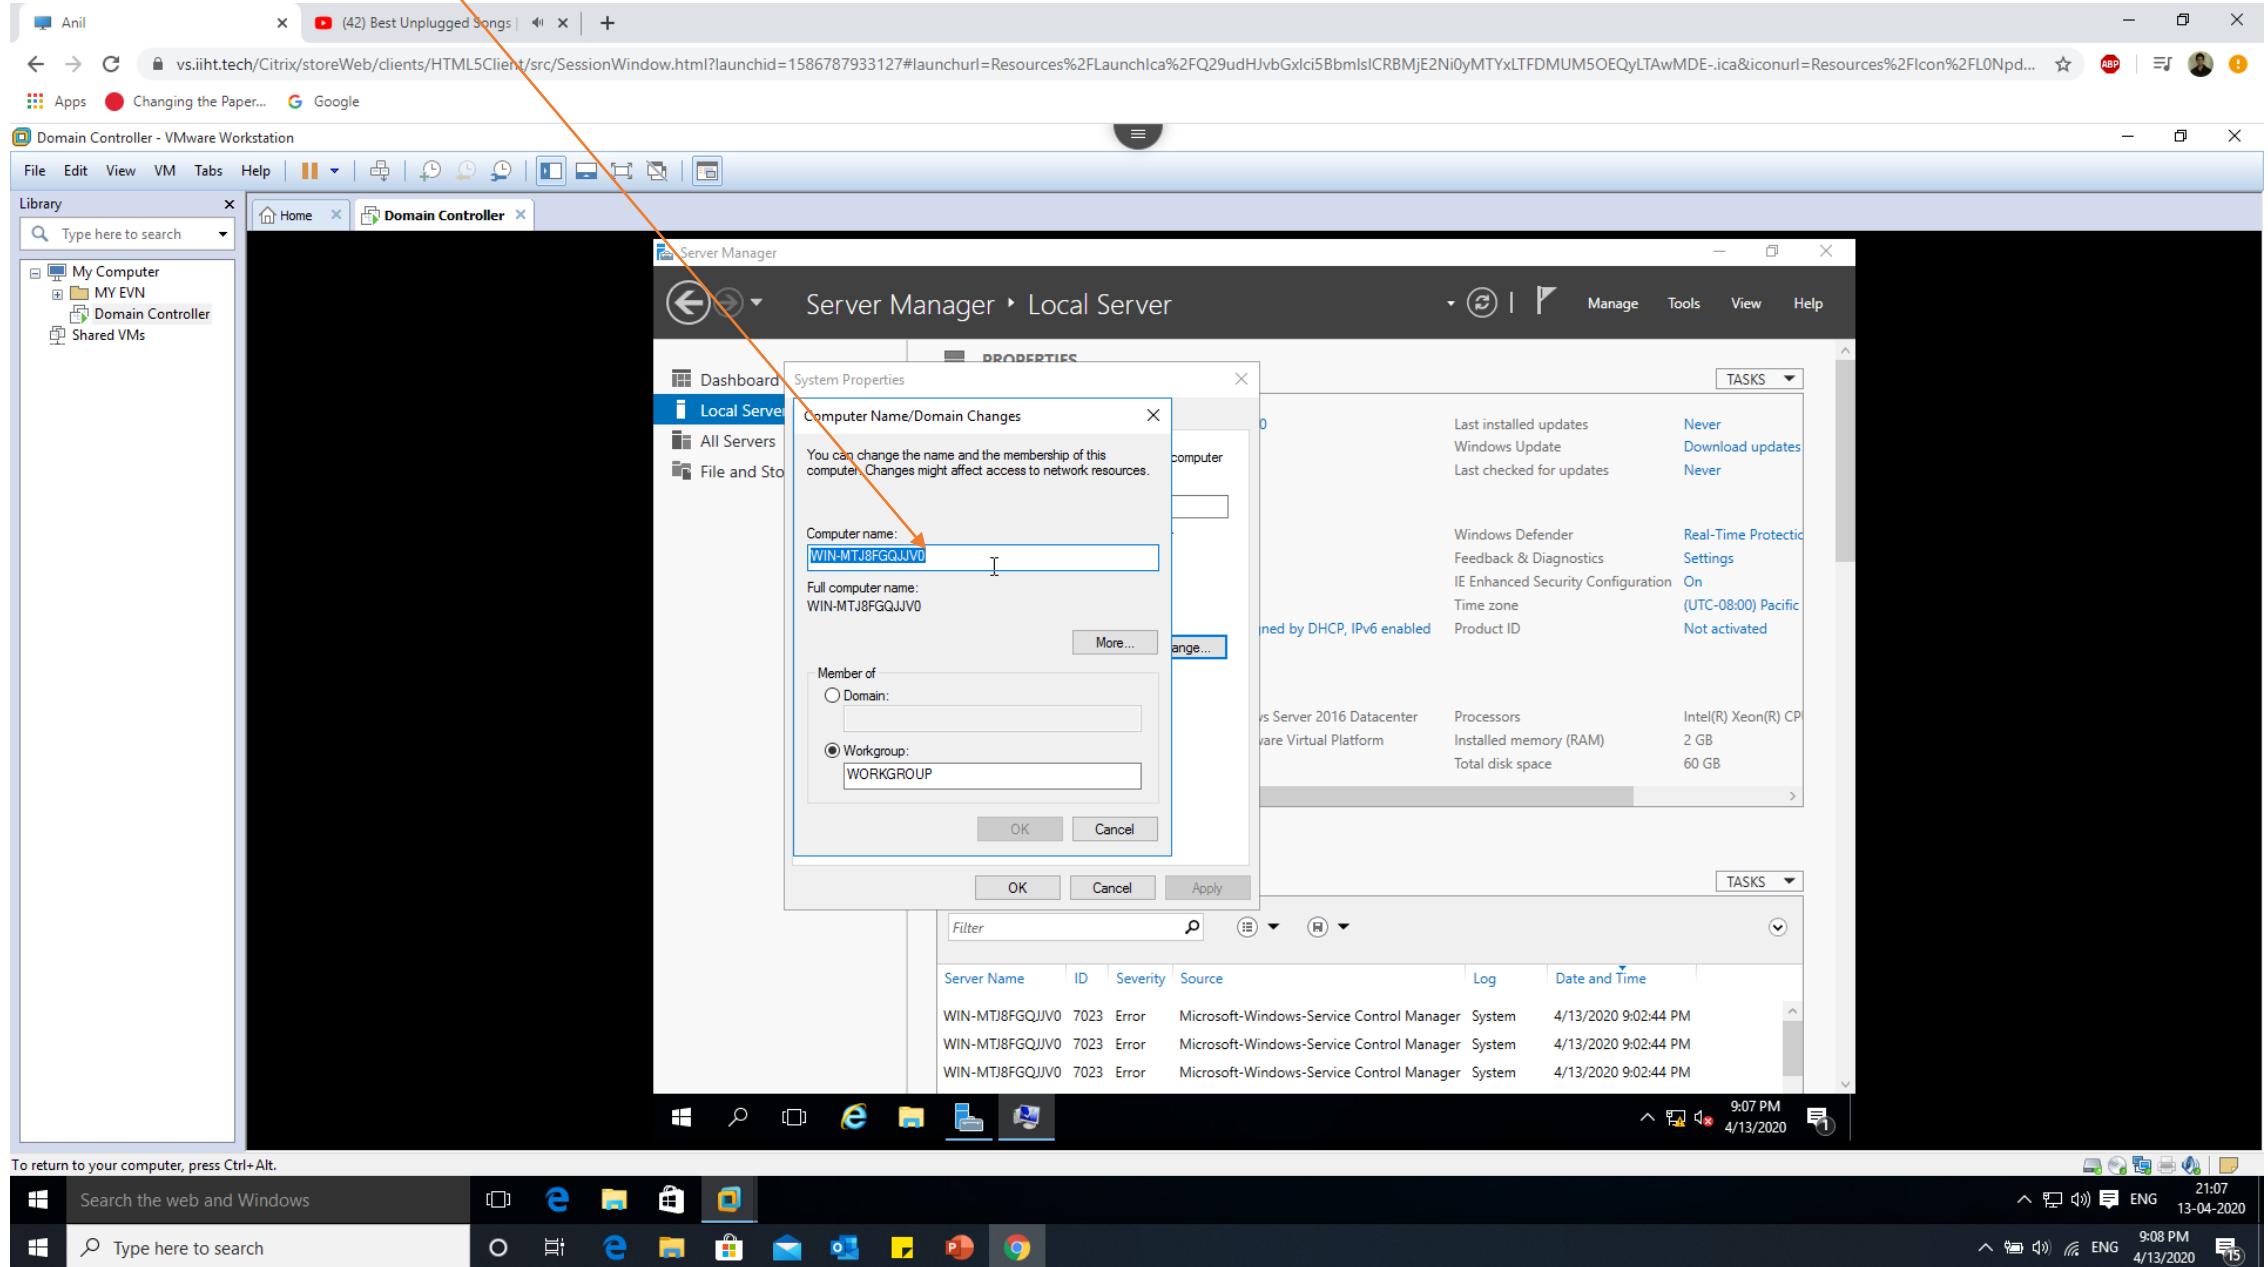

Click on change

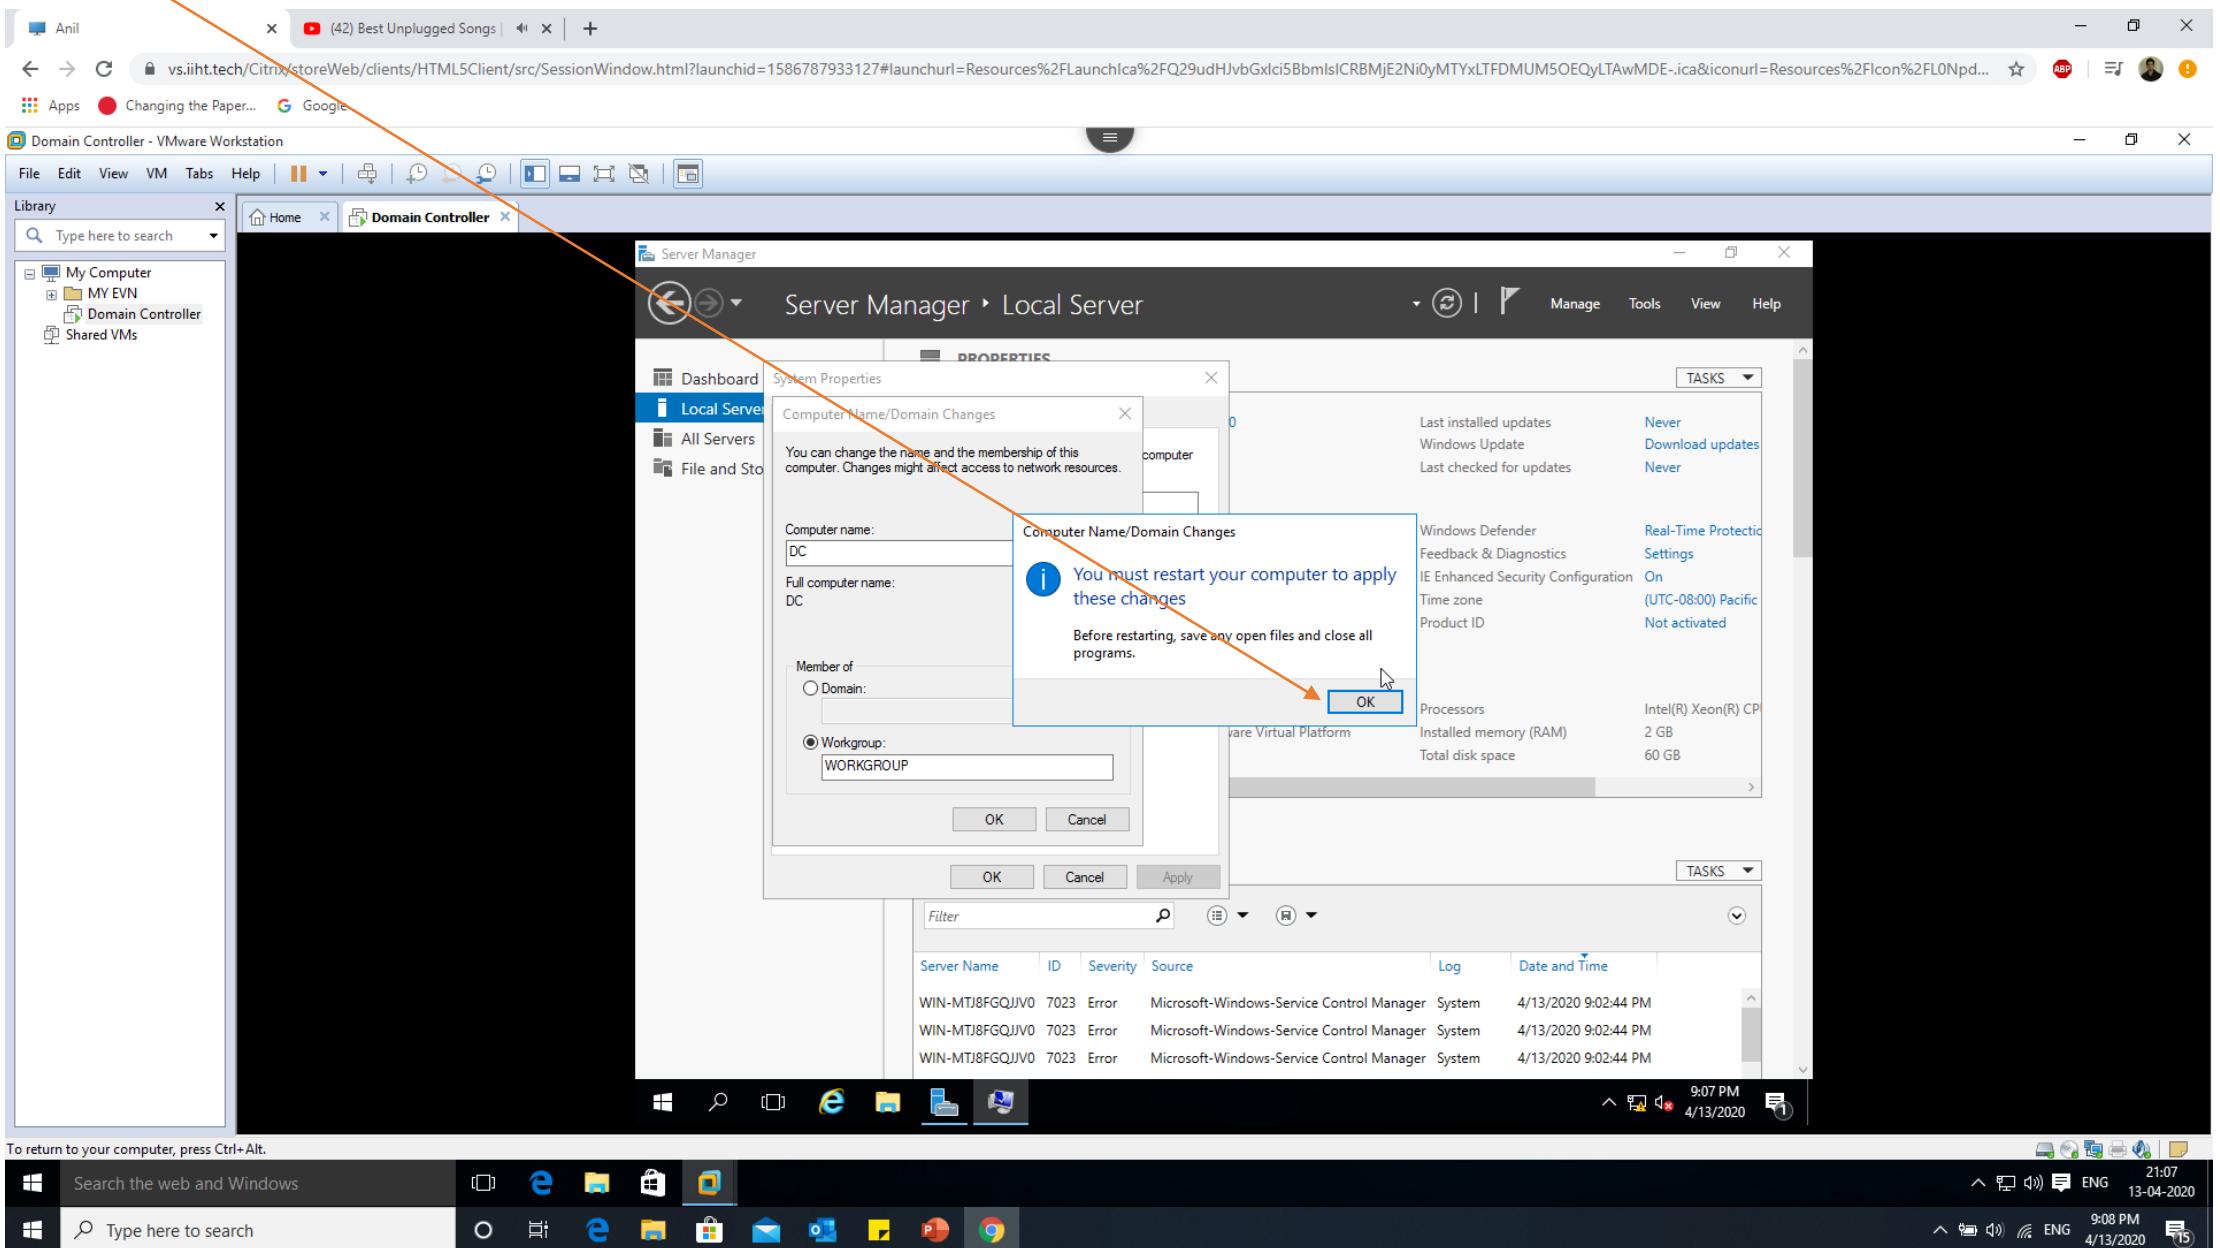

To return to your computer, press Ctrl+Alt.

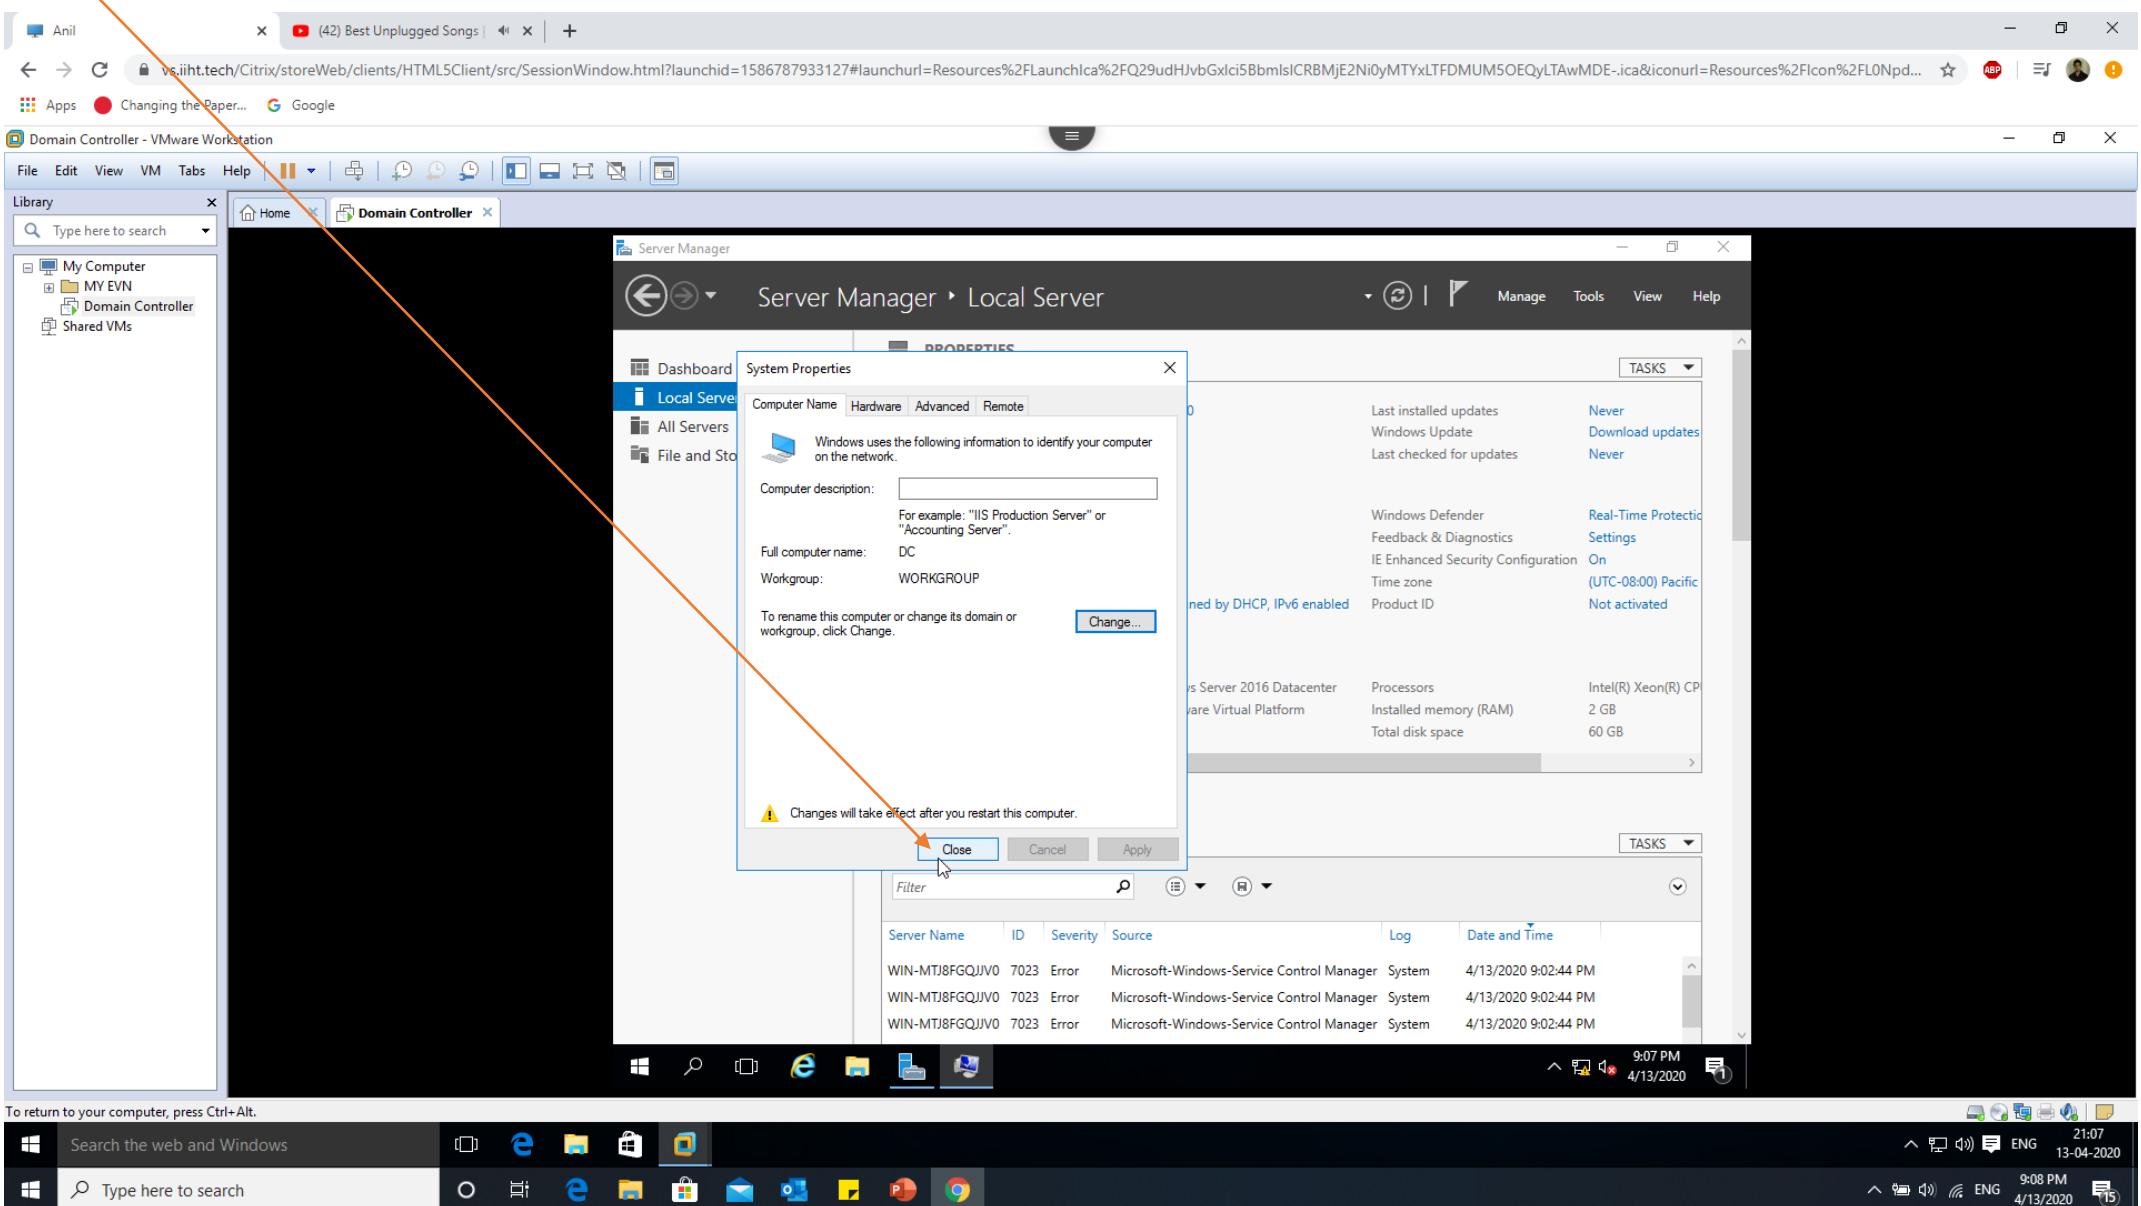

Provide a desired computer name and click ok.

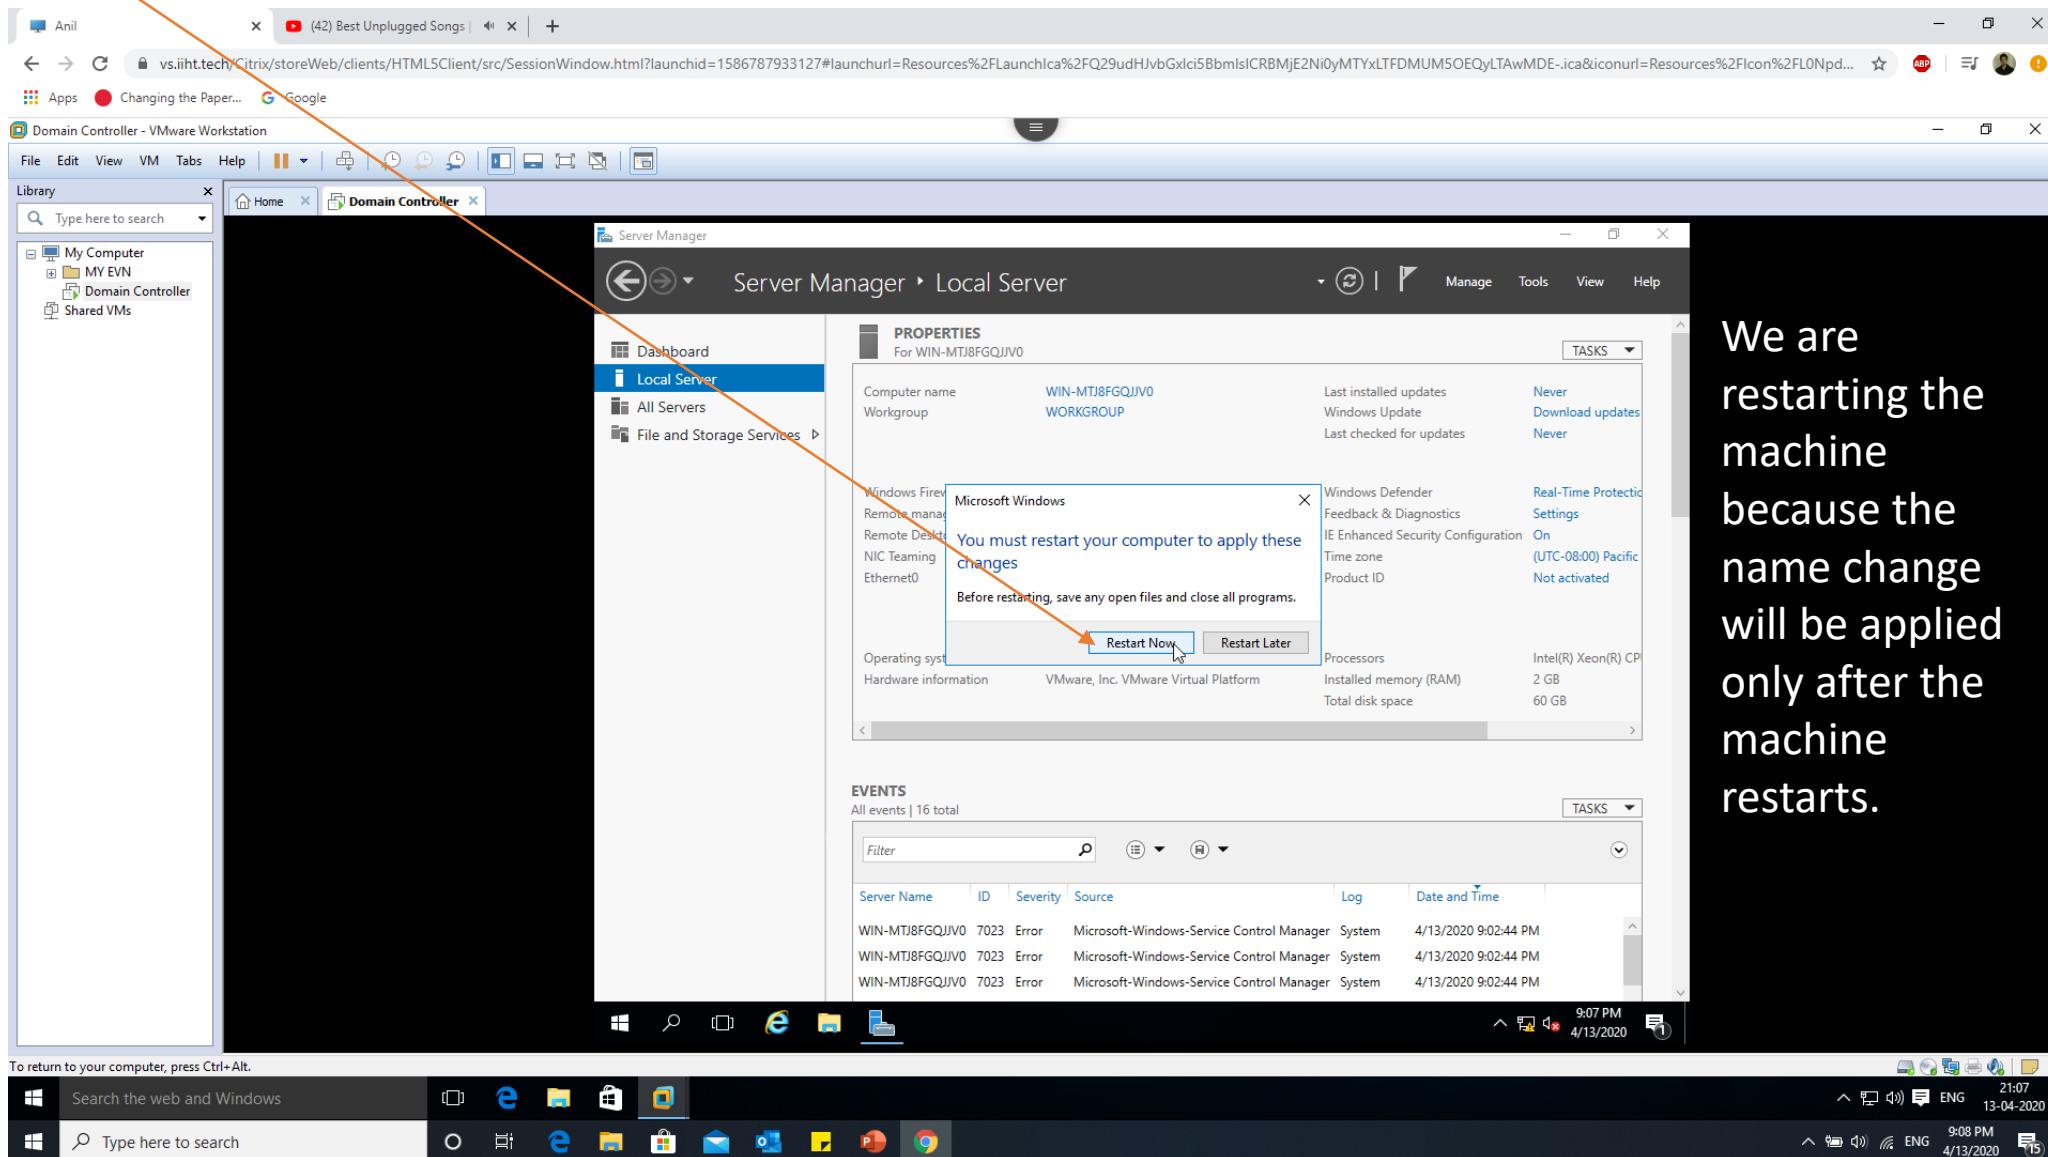

Click on OK

Click close

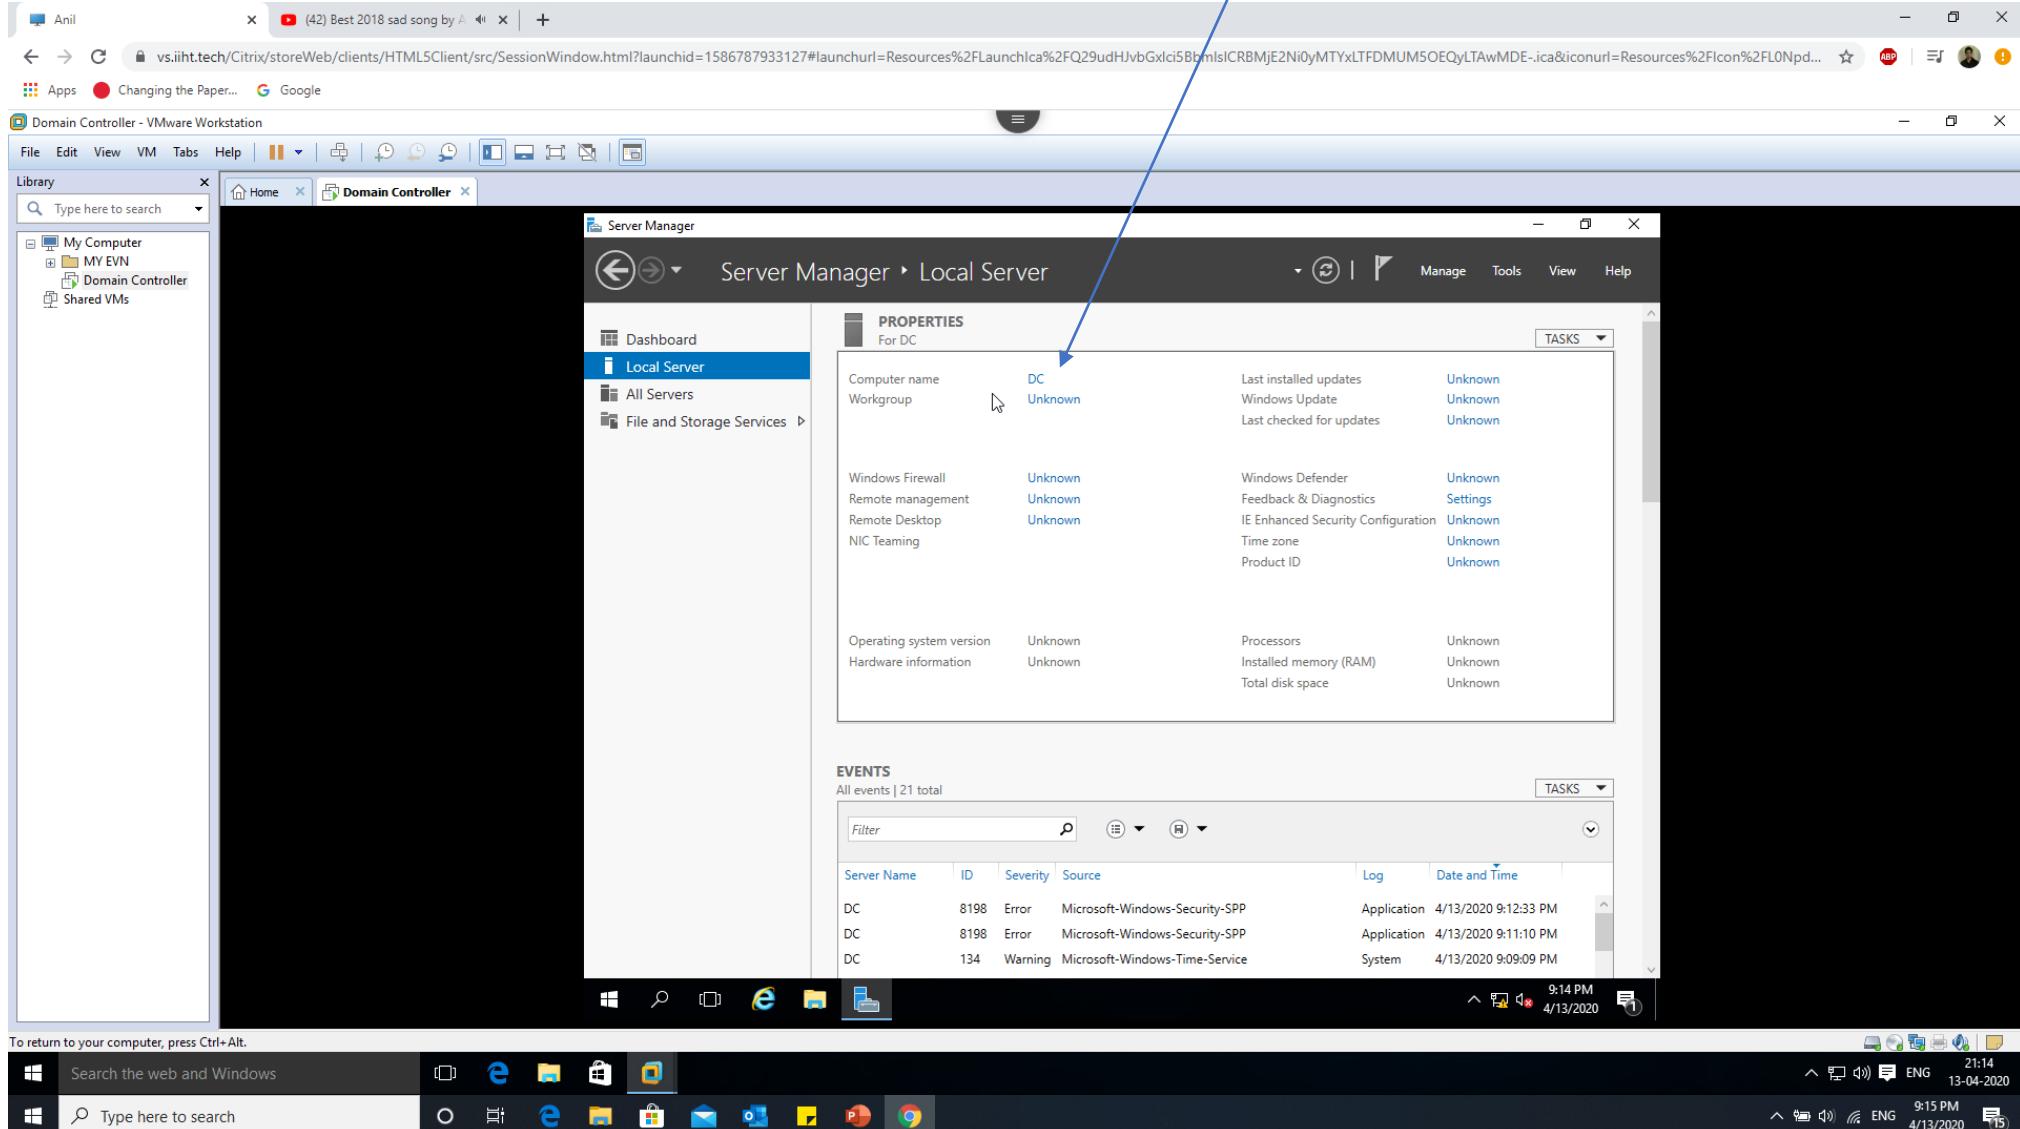

Click Restart Now

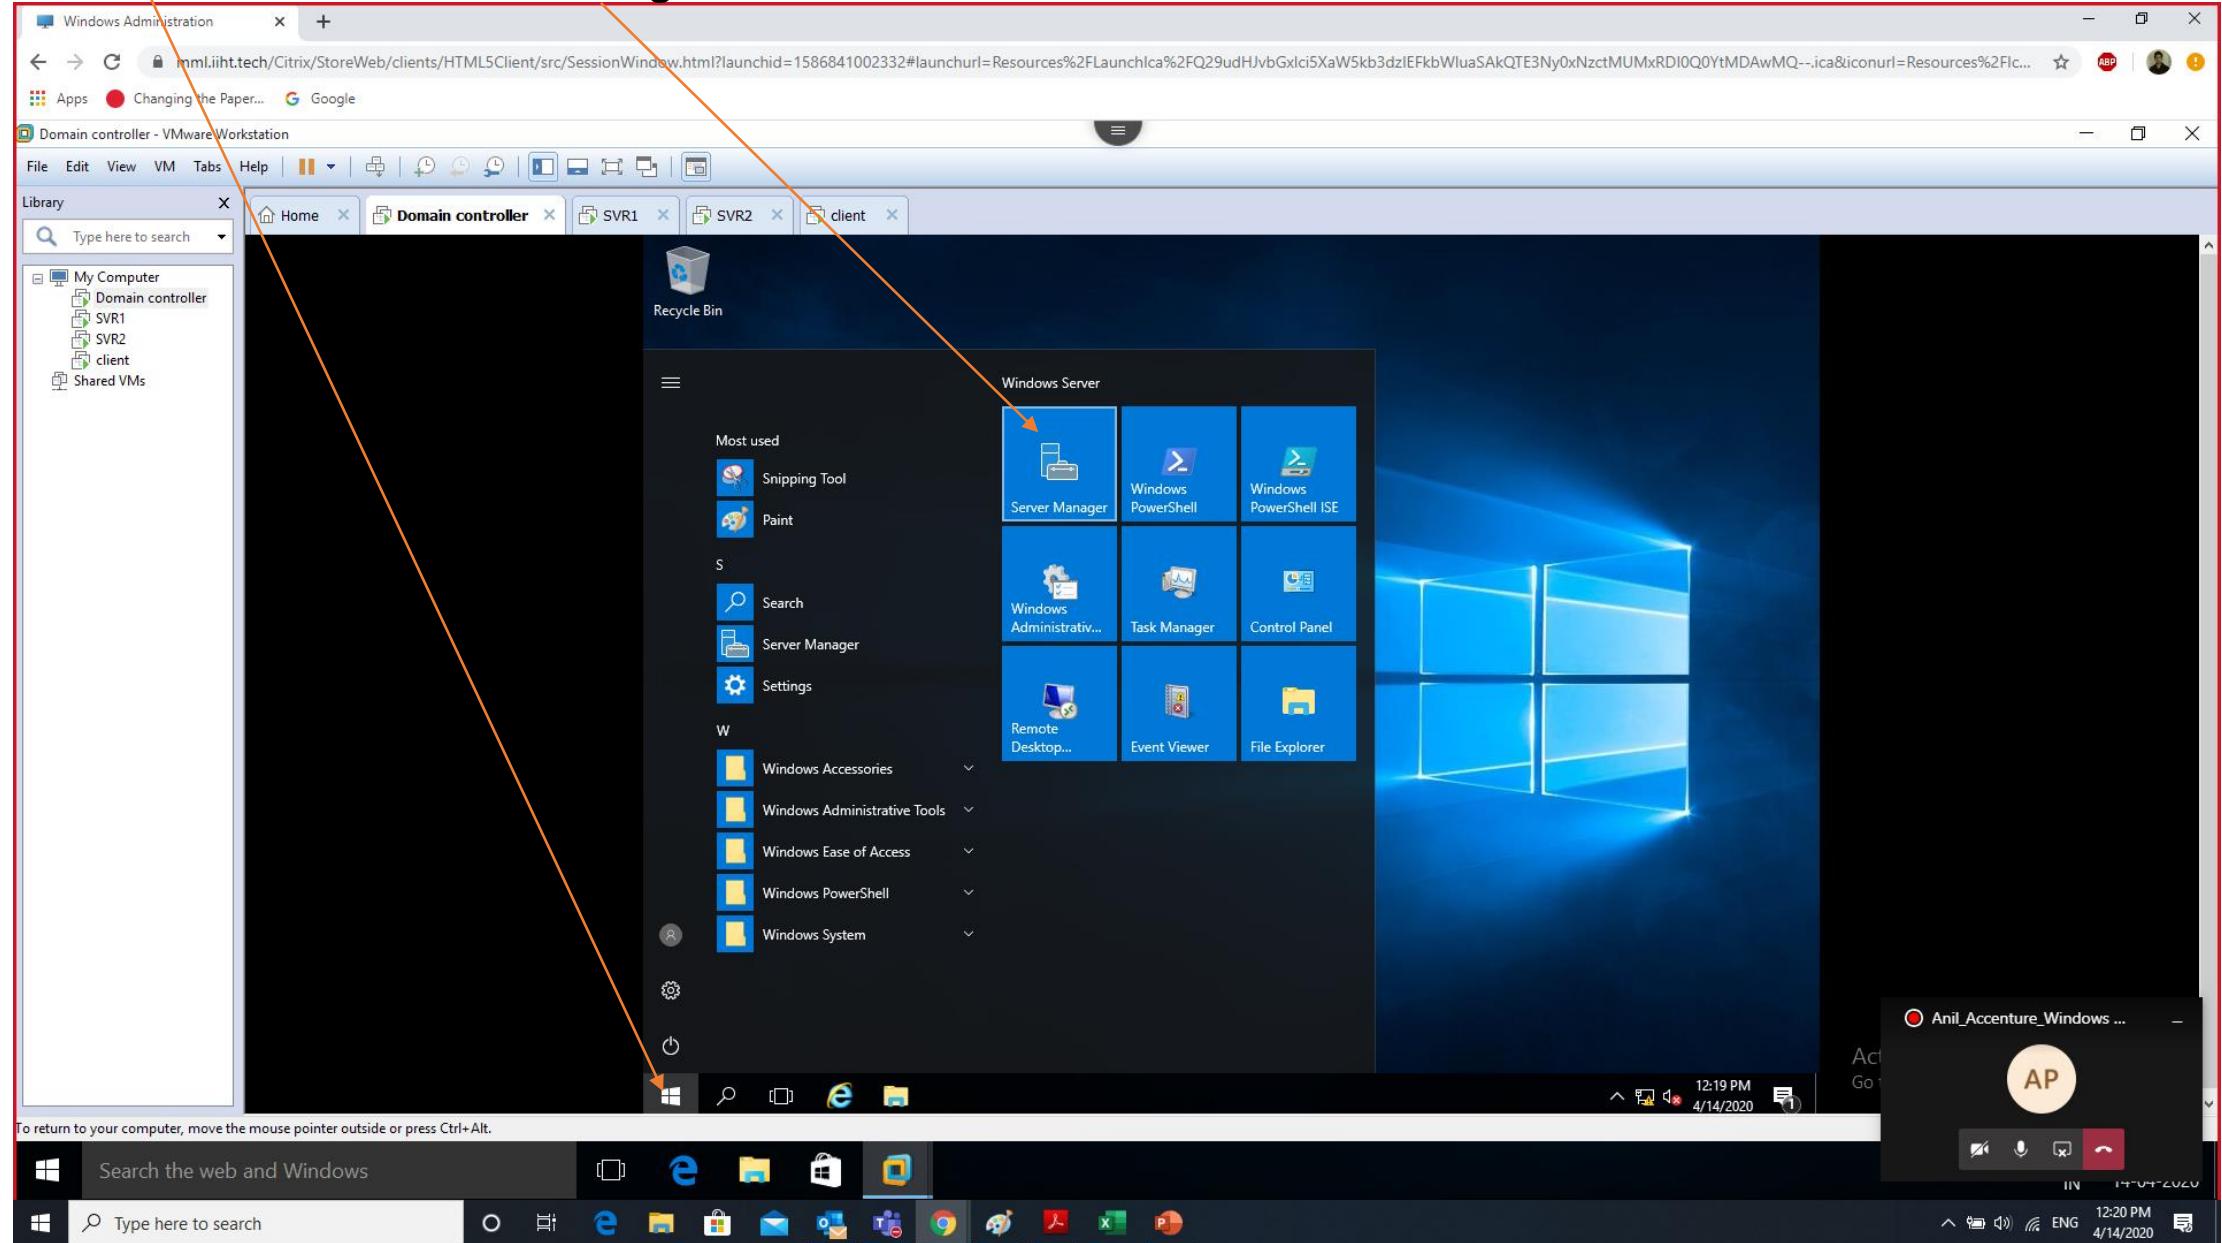

We are
restarting the
machine
because the
name change
will be applied
only after the
machine
restarts.

After the machine is restarted, you can see that the computer name is changed.

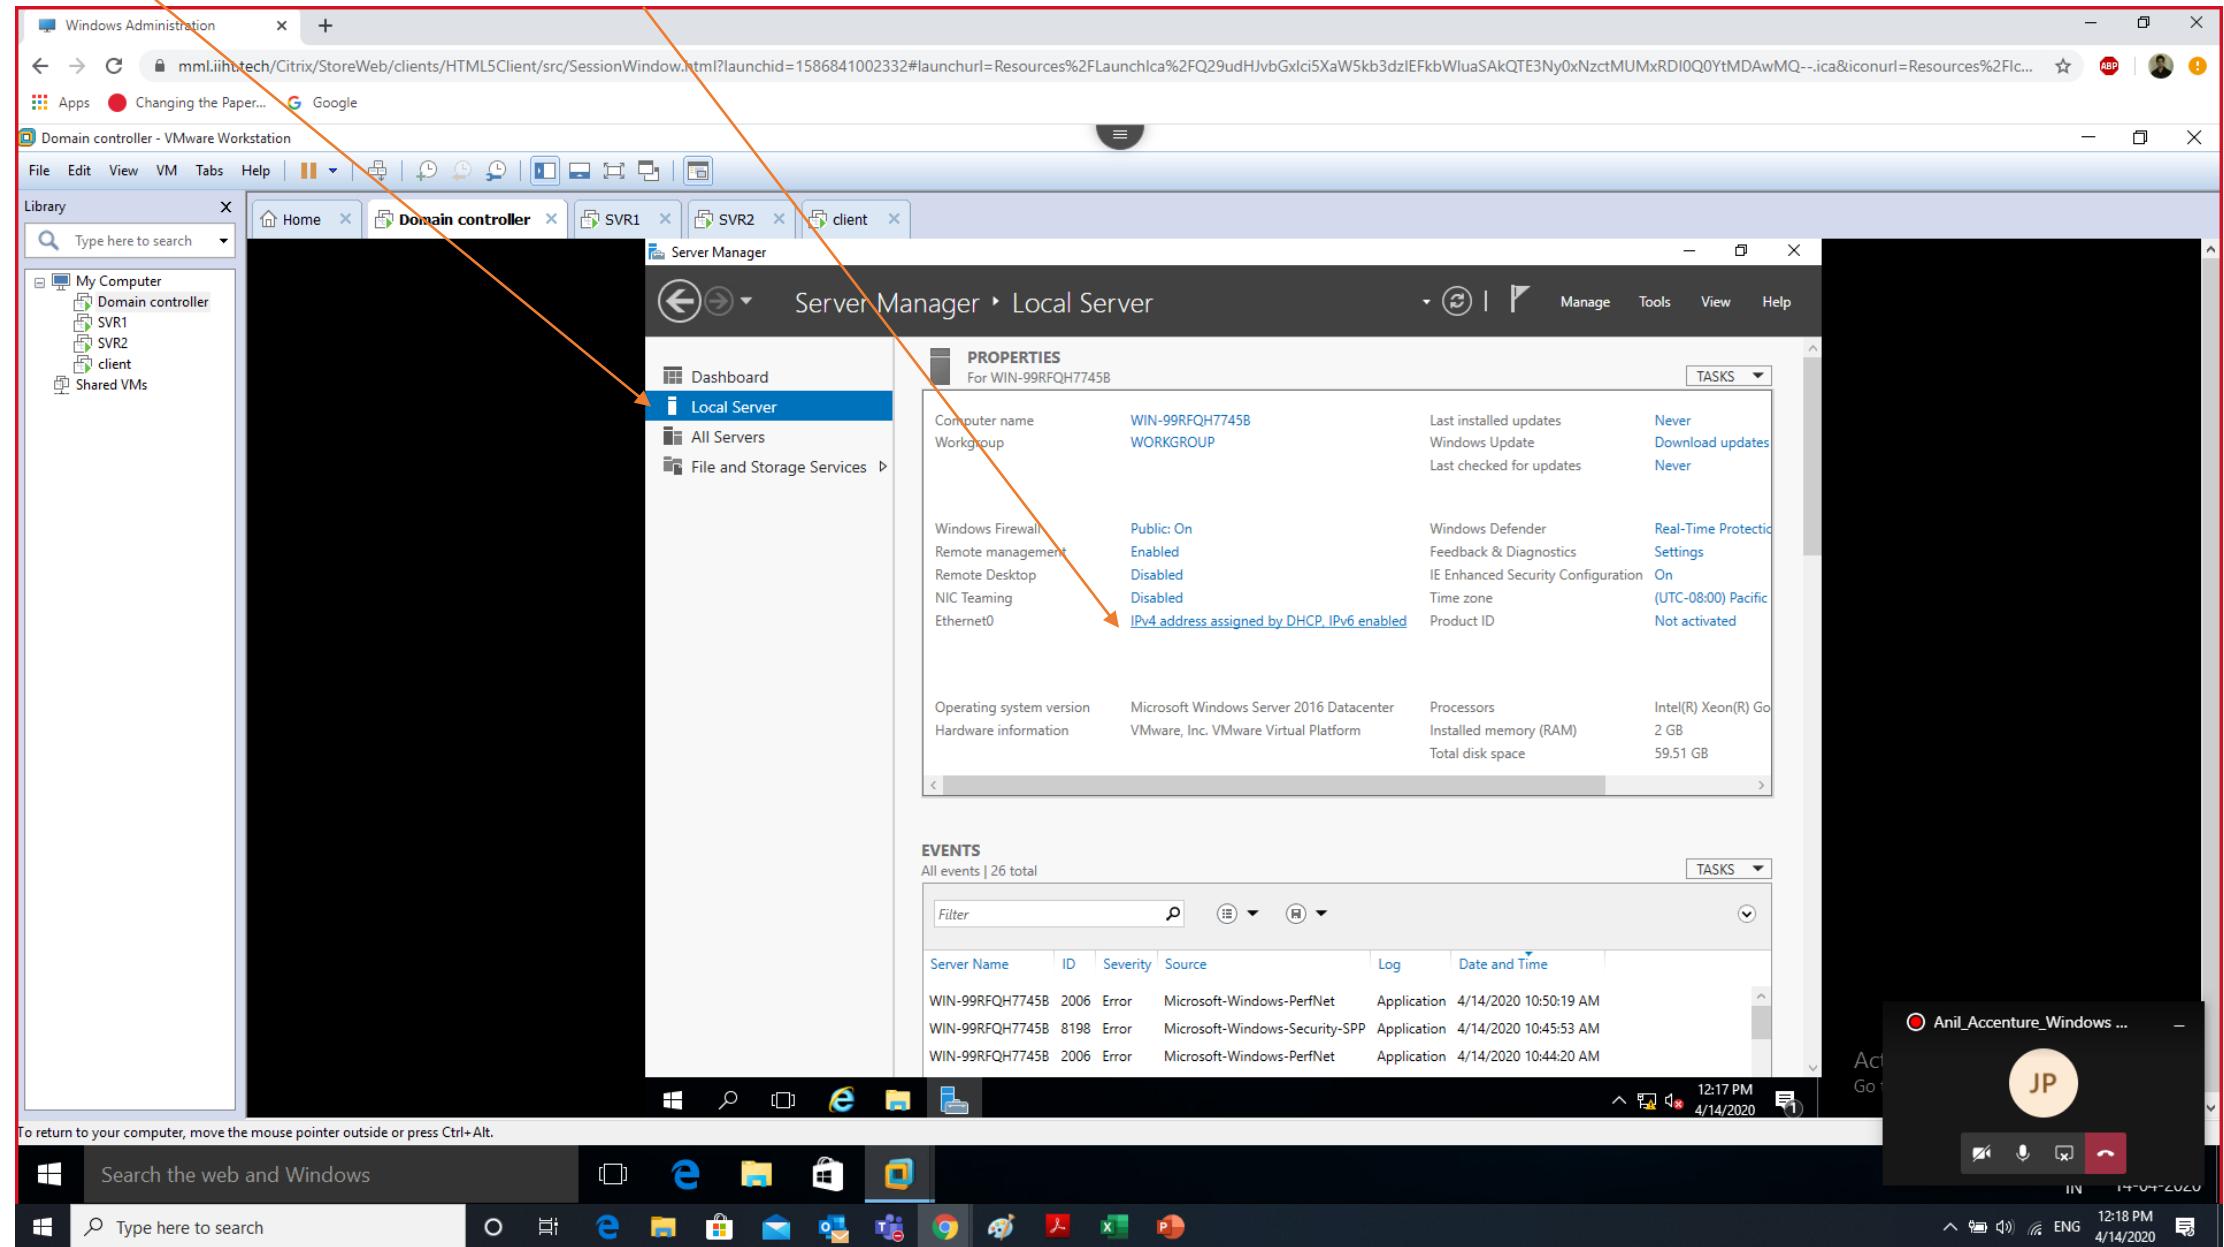

TASK 3:
Setting IP address of the machine

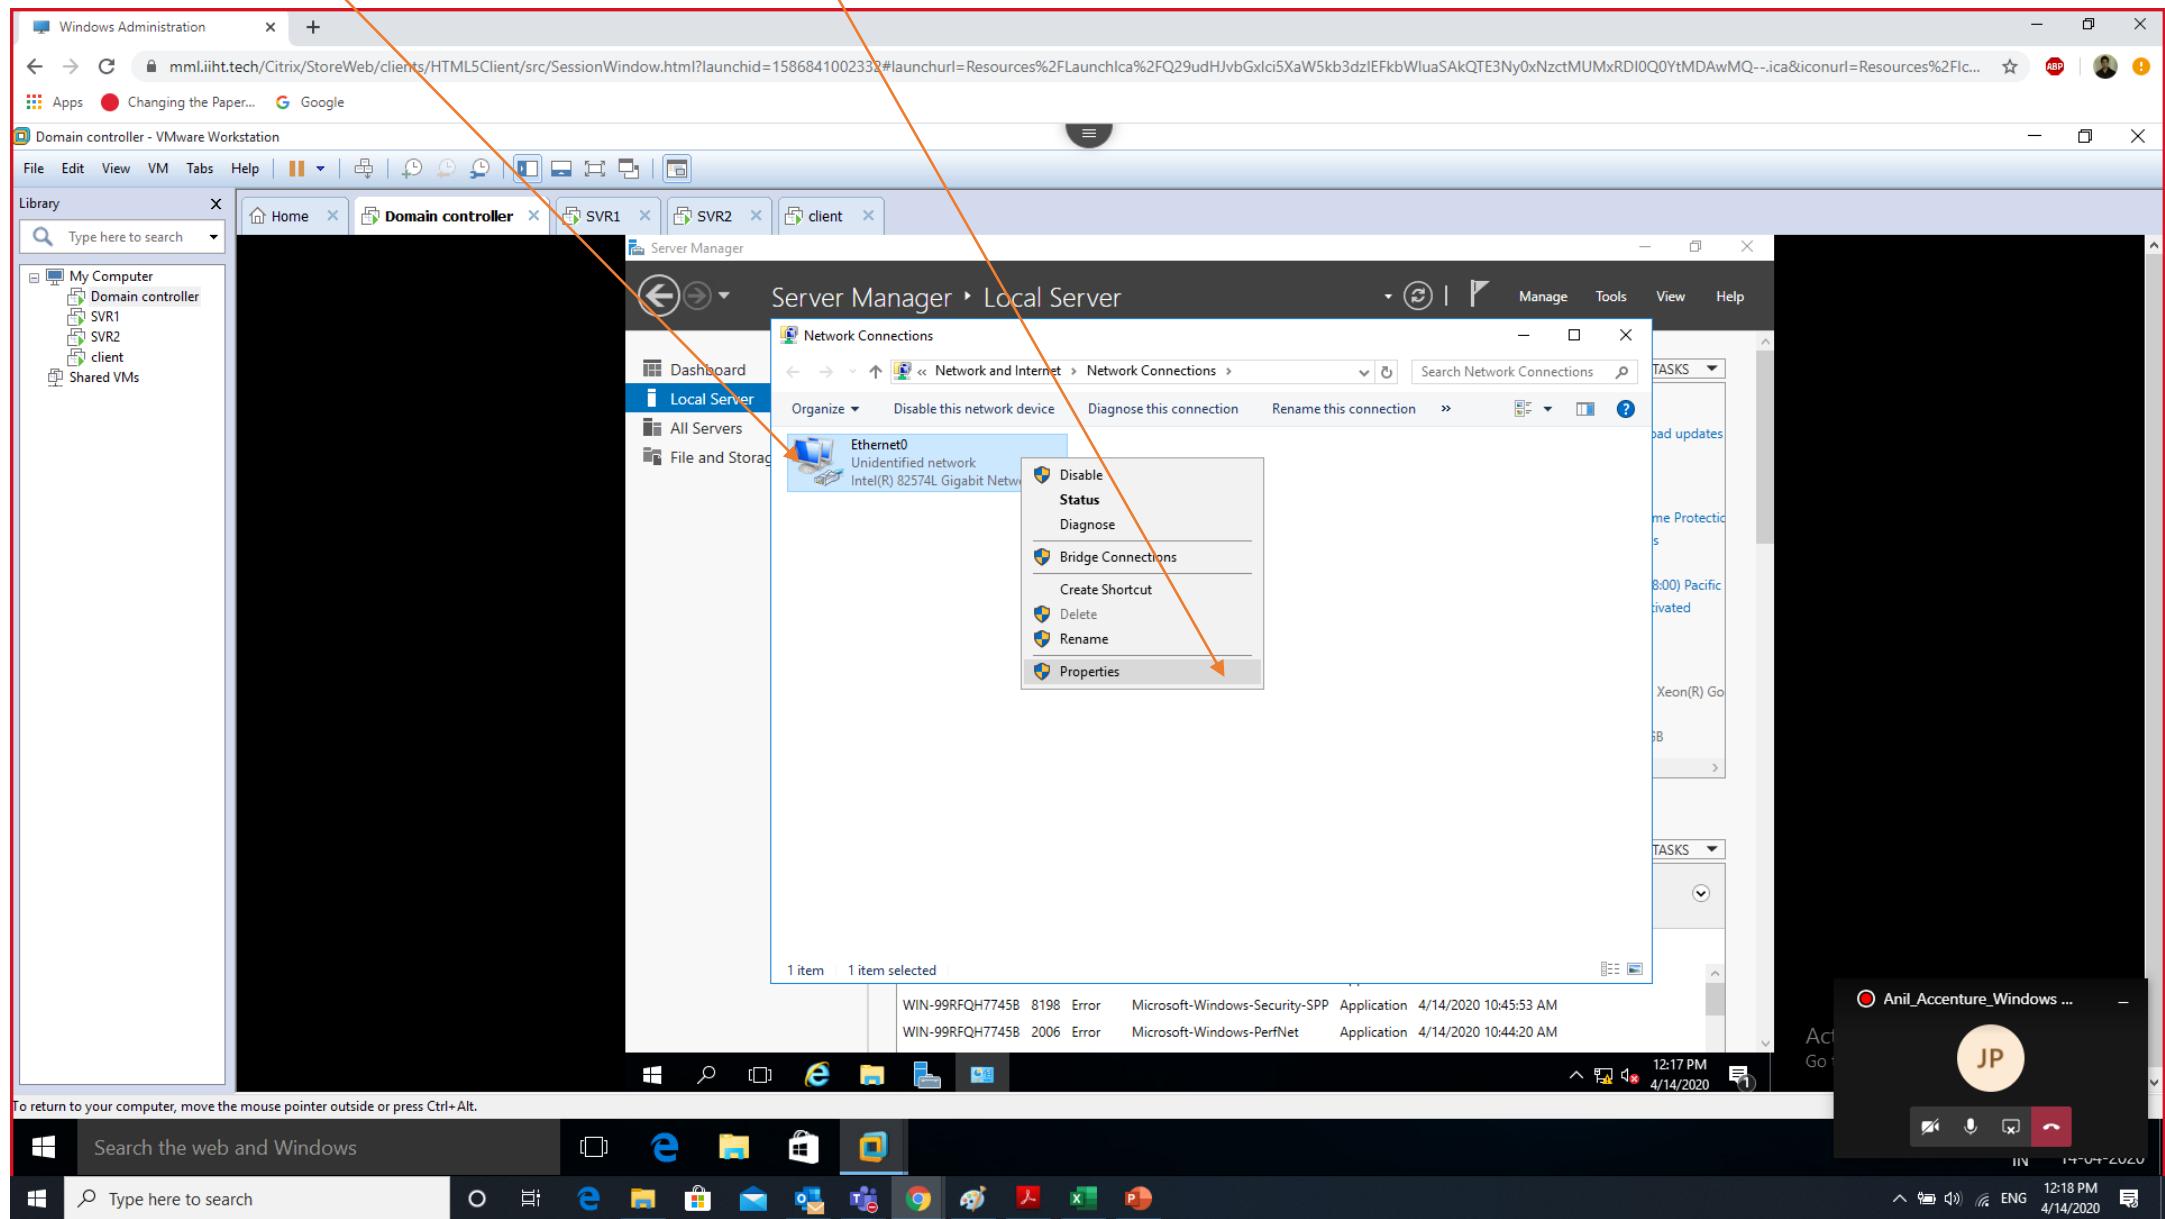

Click on start and select server manager

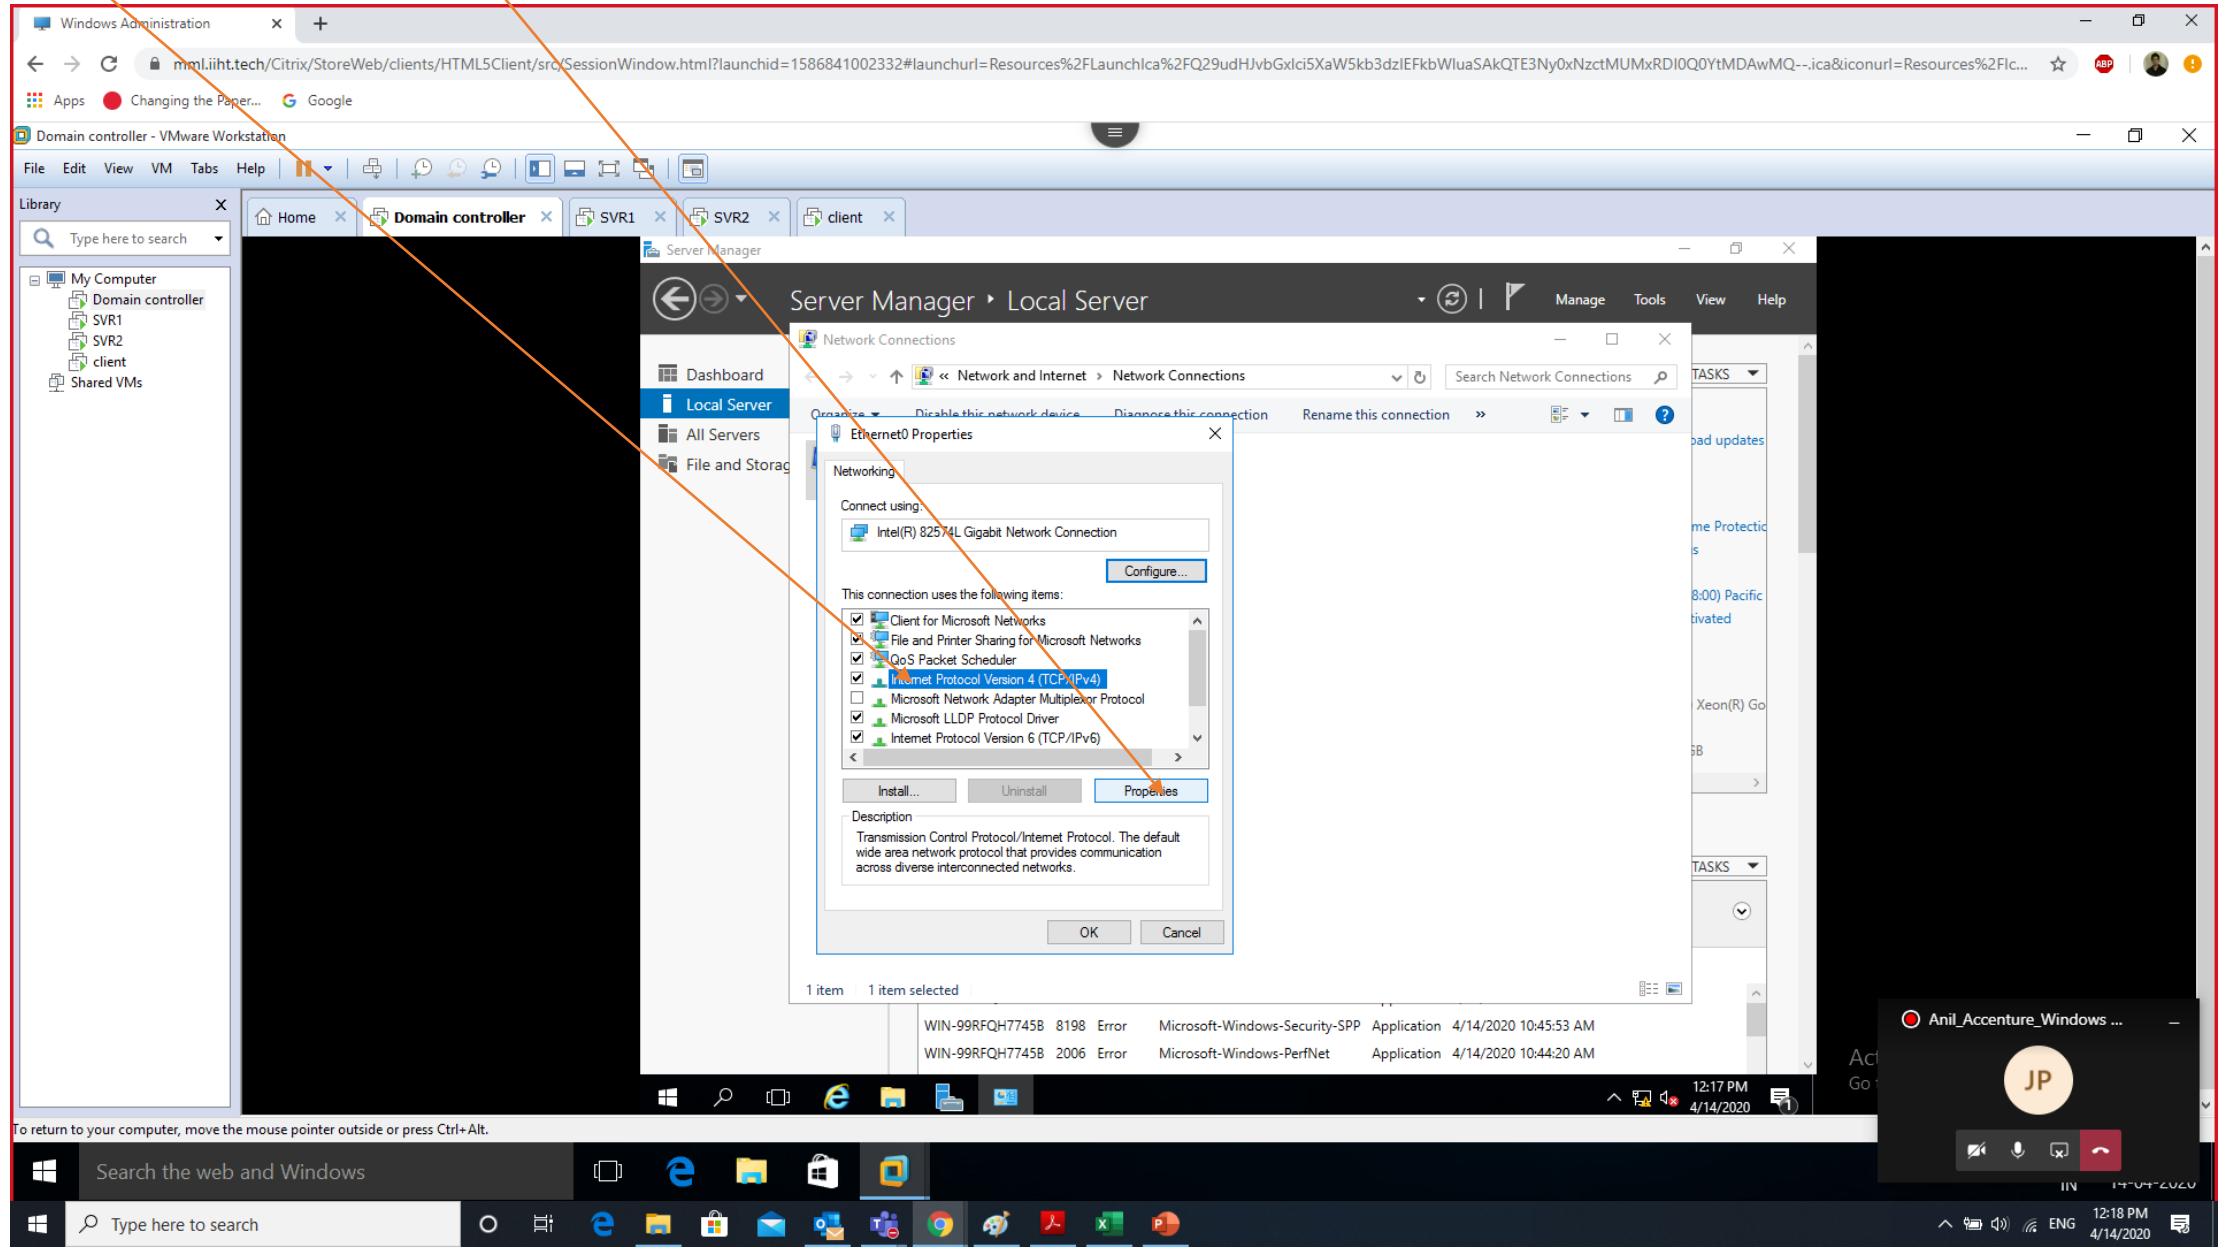

Select local server and click on IPv4 address

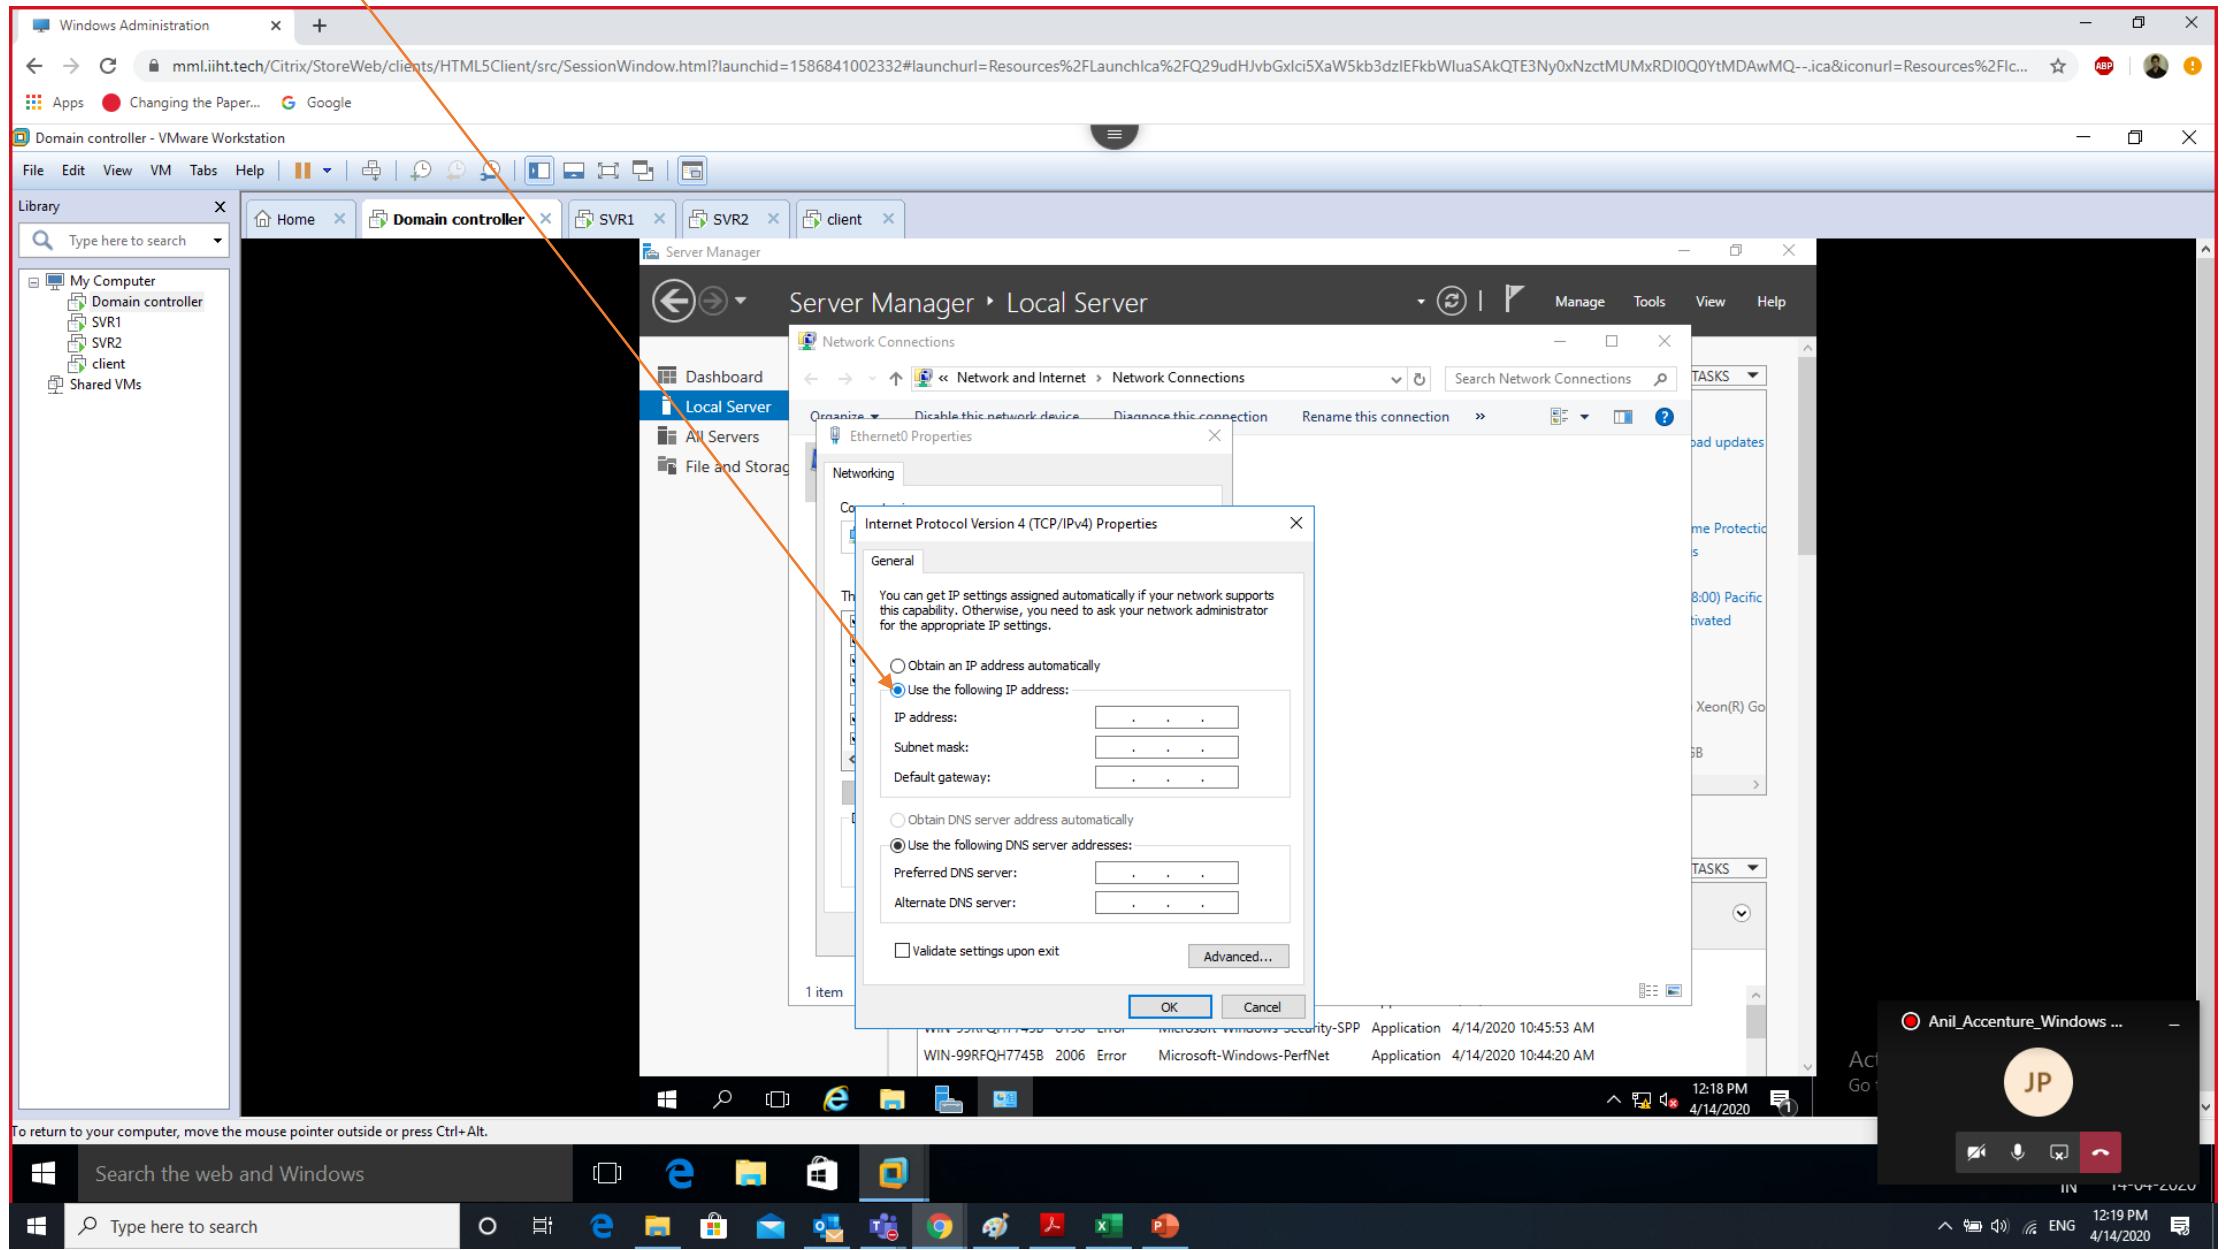

Right click on network adaptor and click on properties

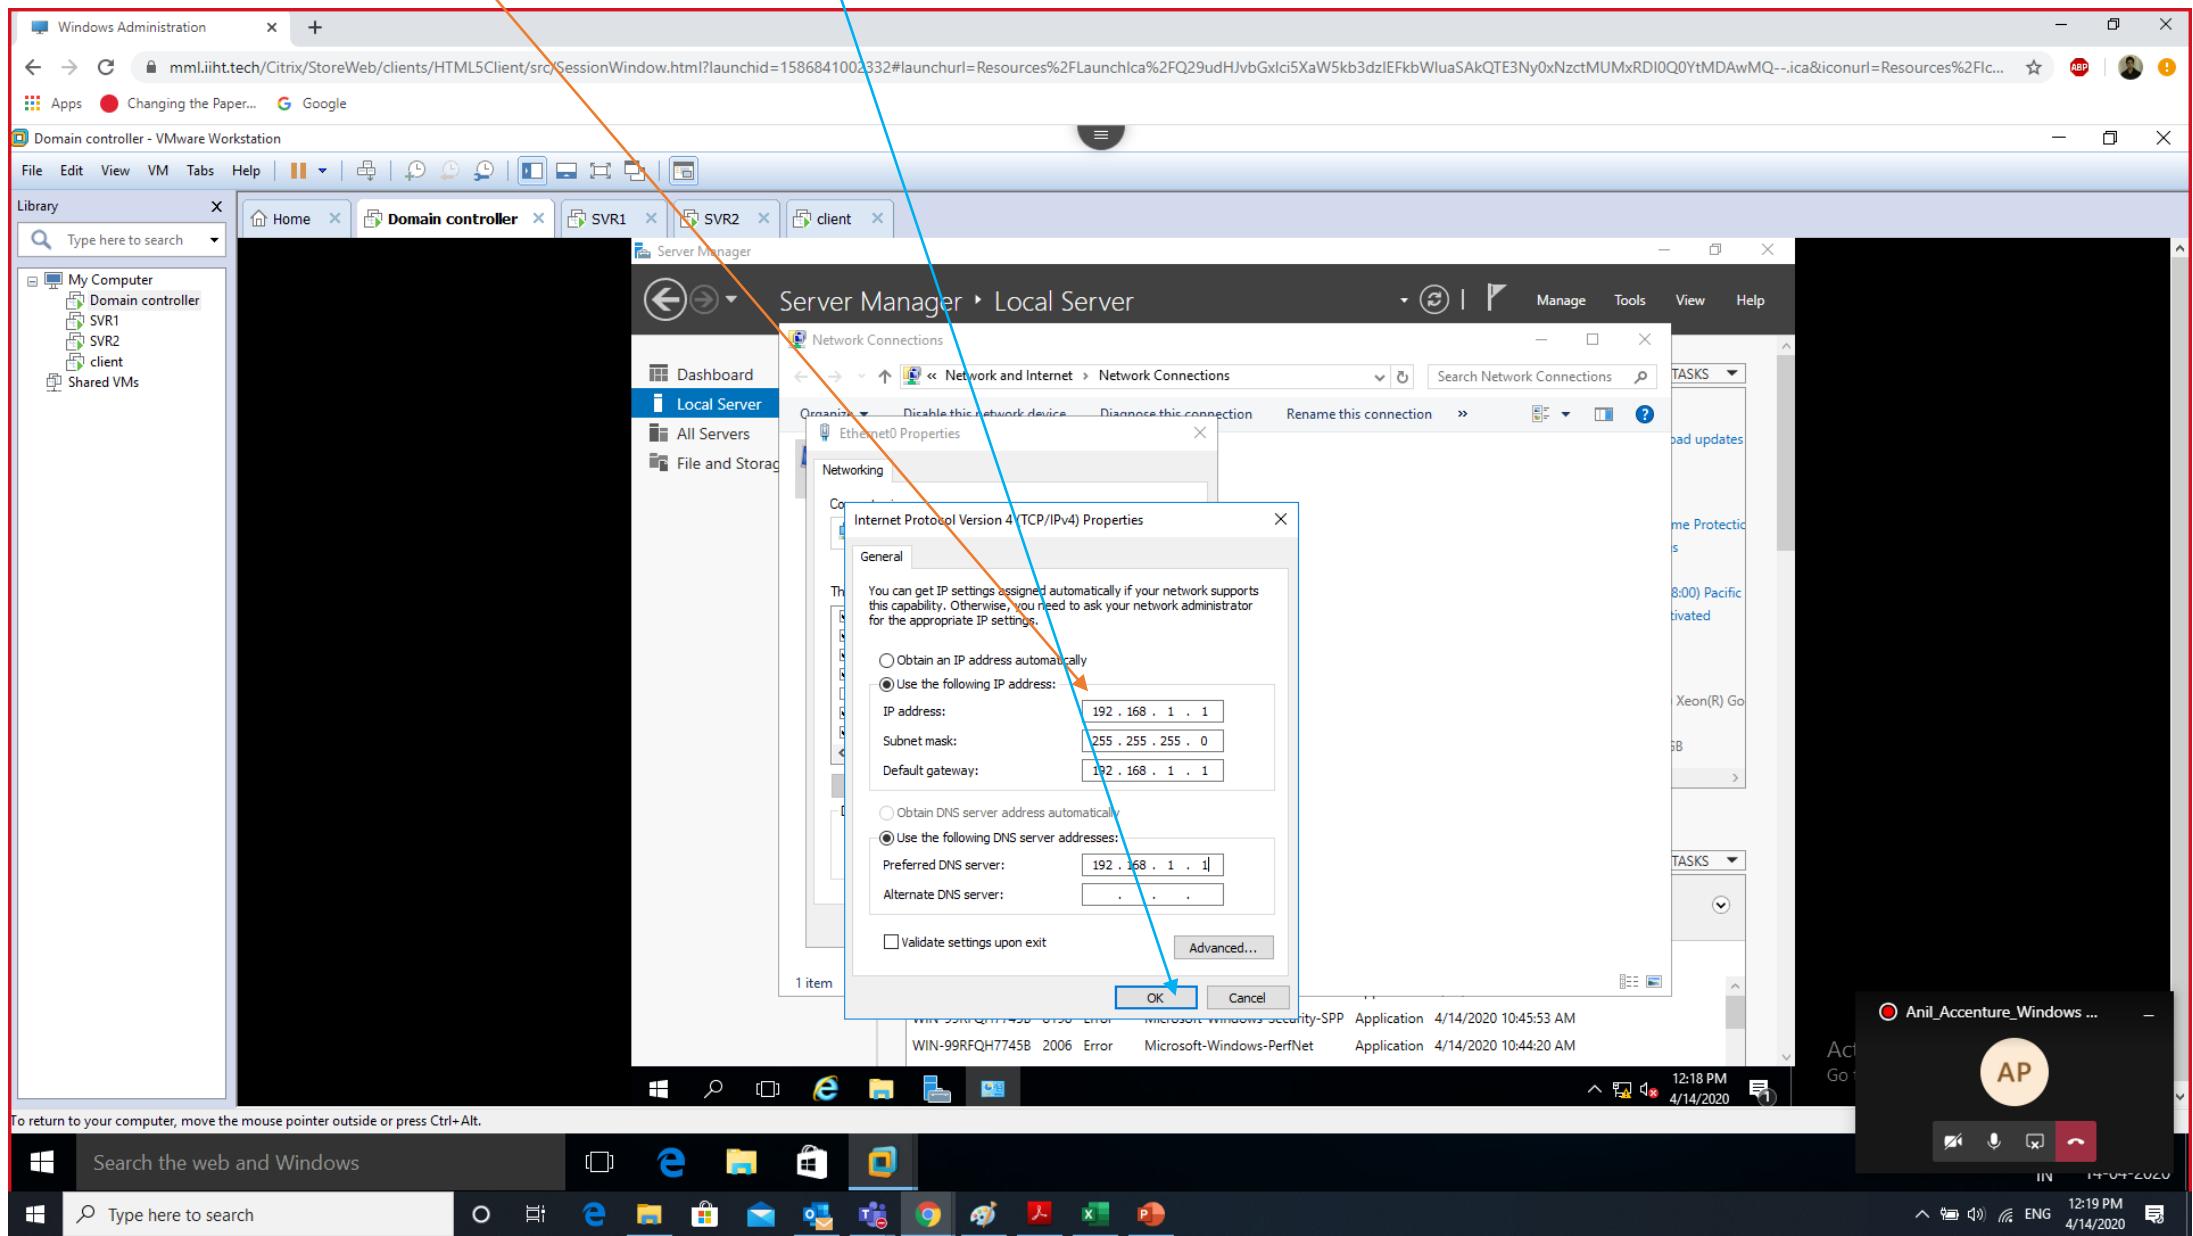

Select IPv4 and click on properties

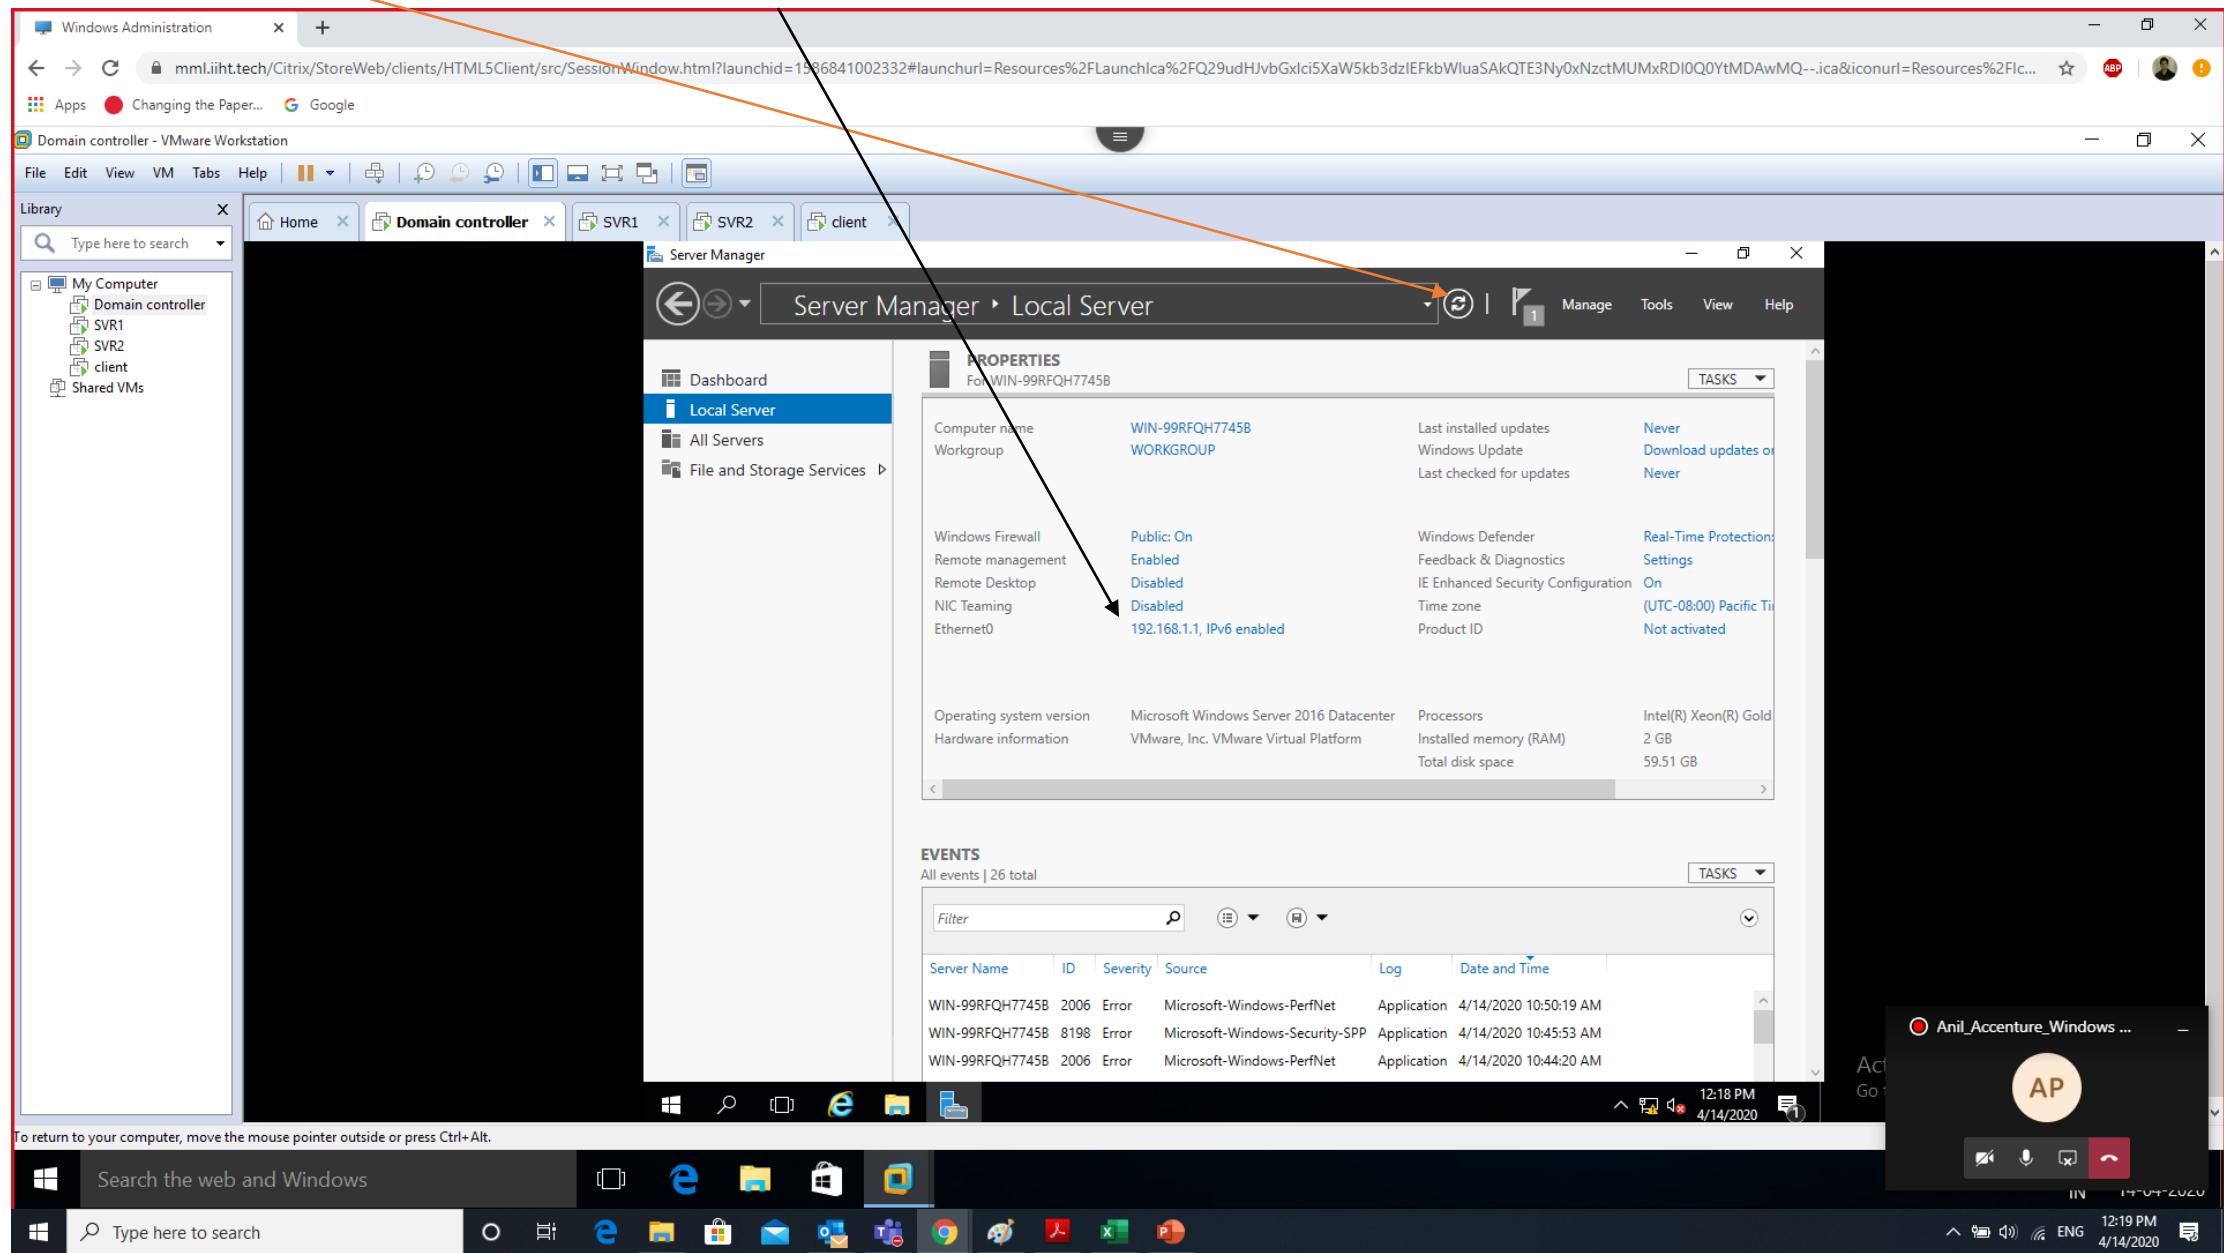

Select use the following IP

Fill the details as per requirement and click on OK

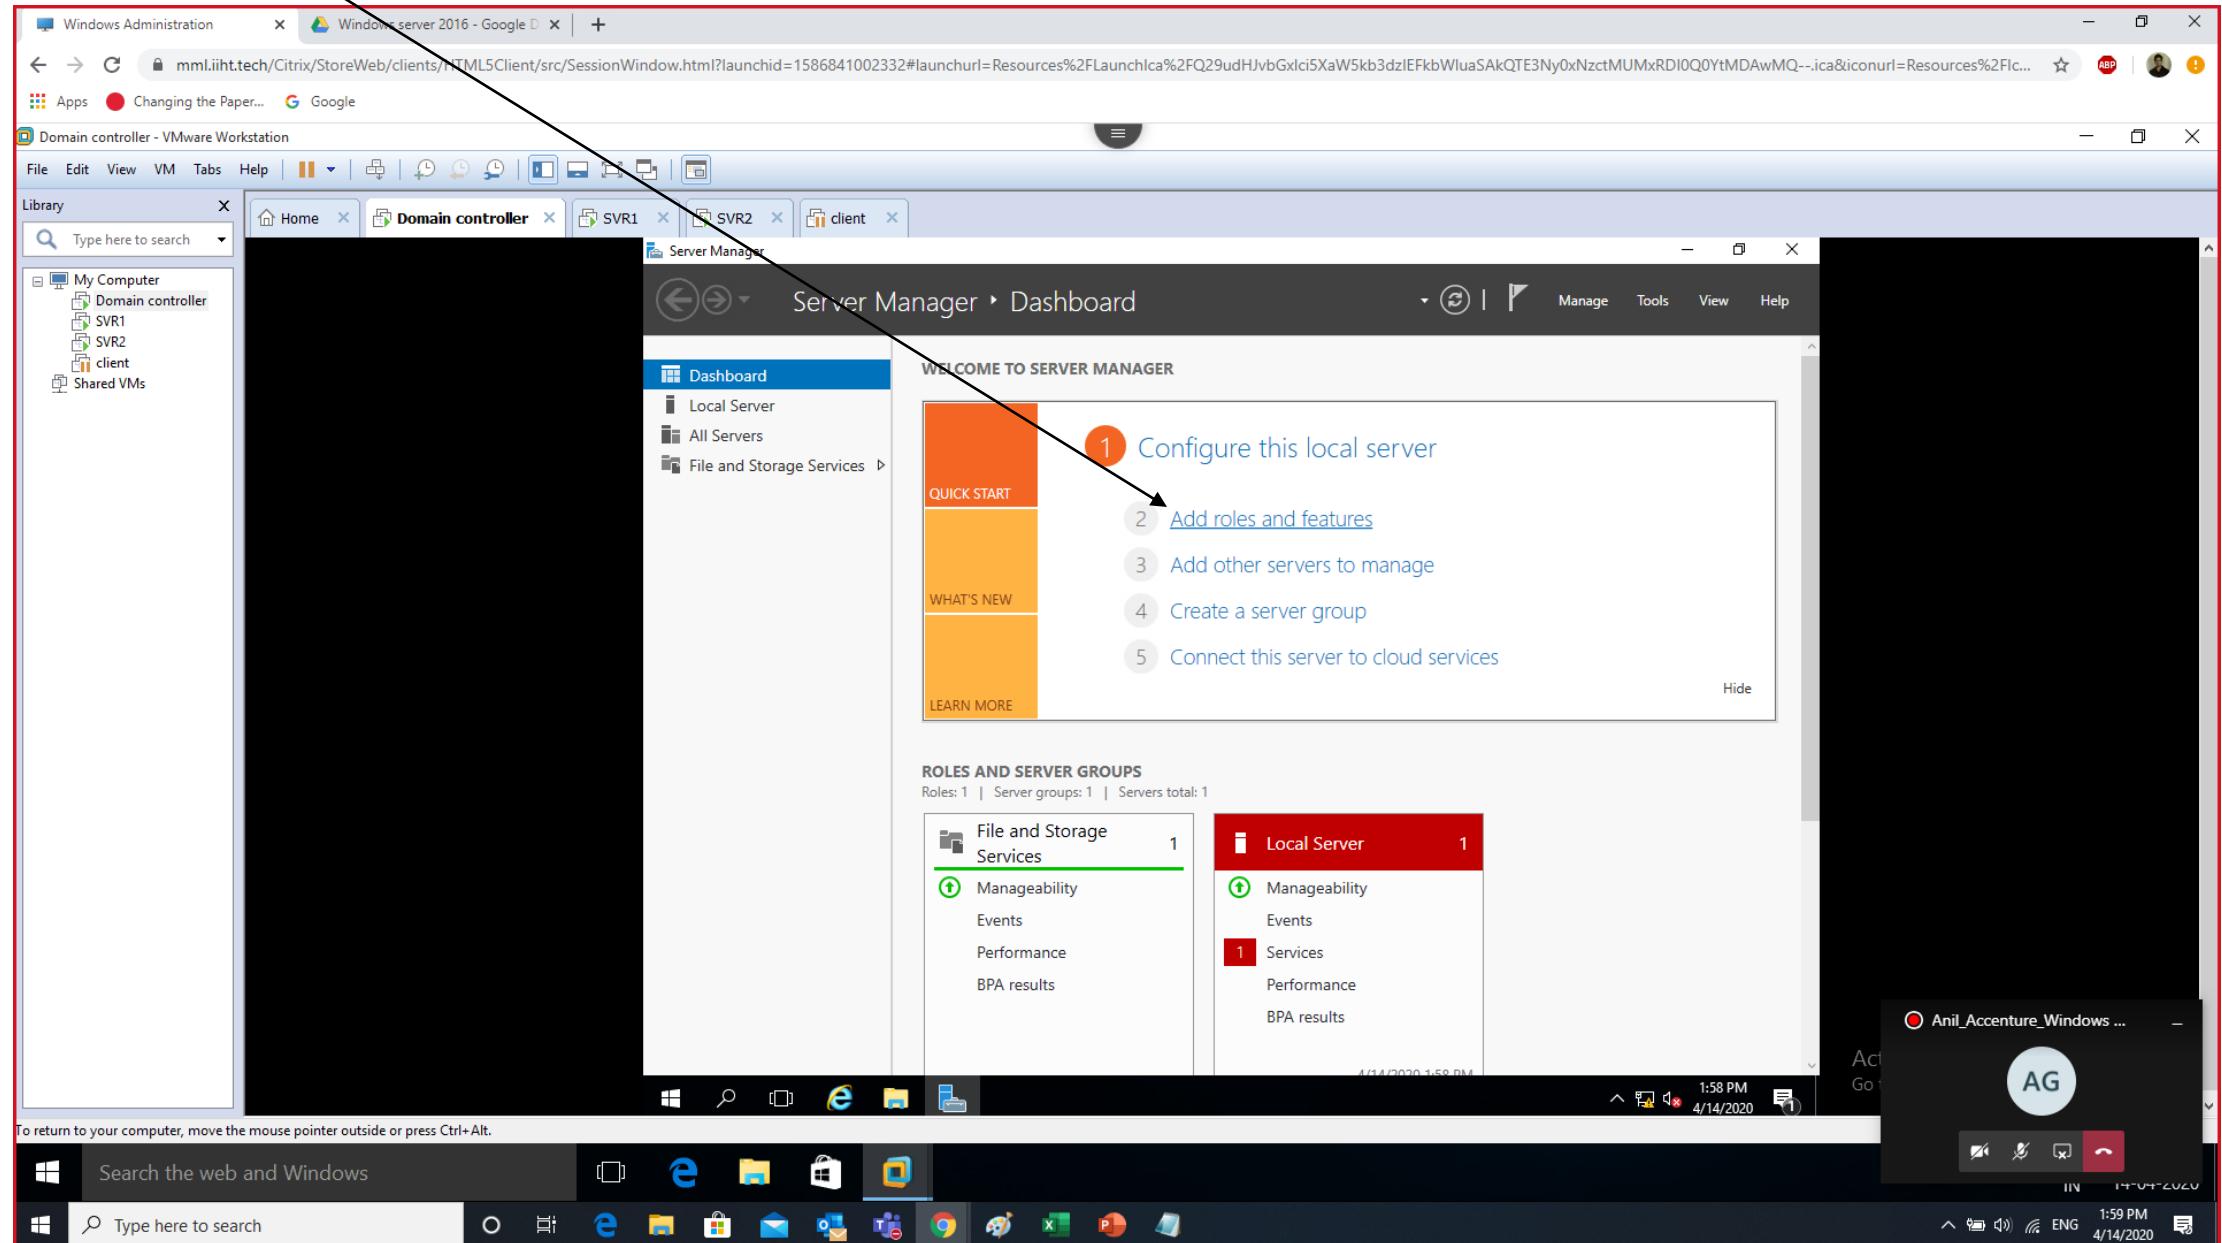

RESULT: click on refresh and check the IP displayed.

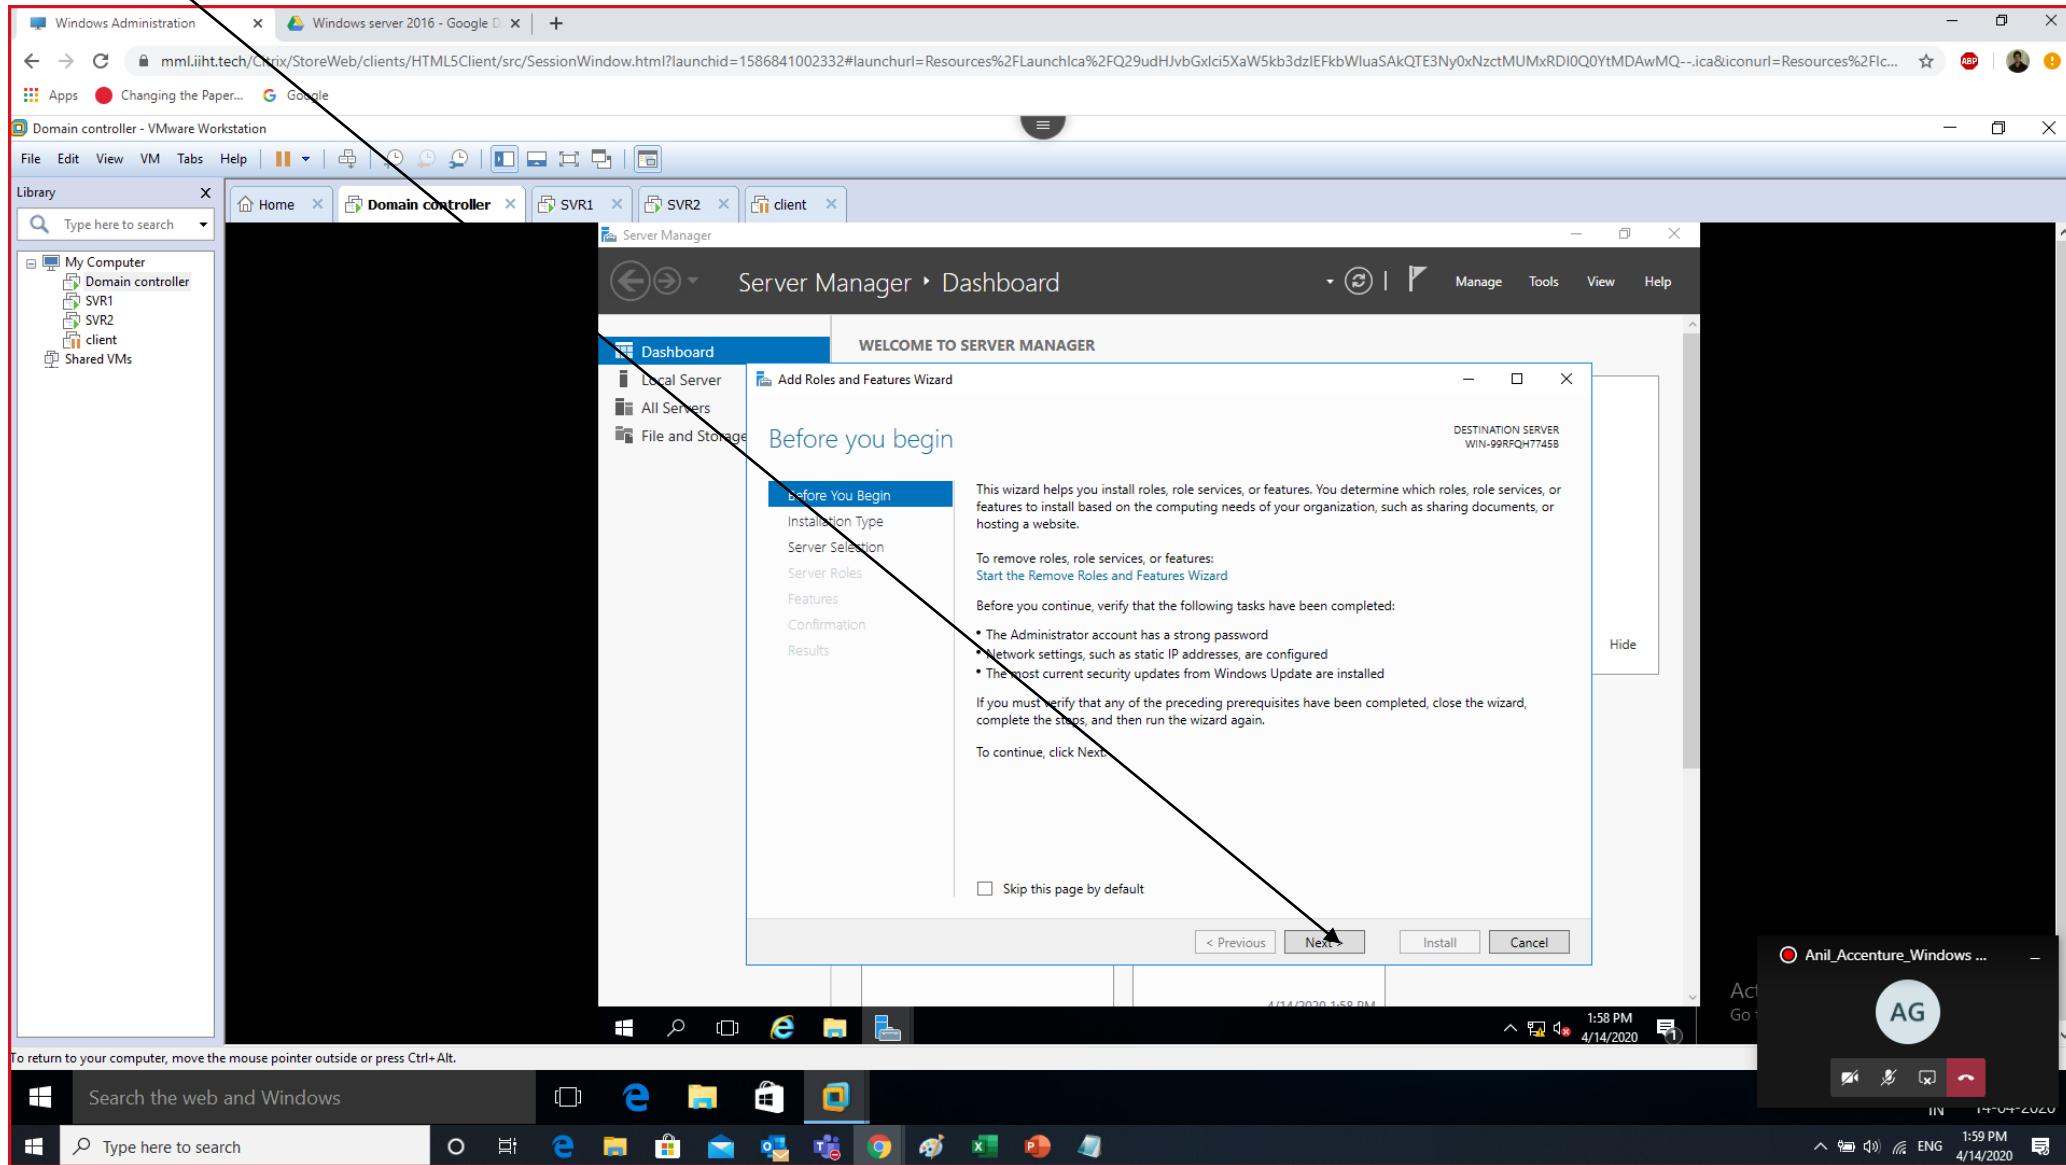

TASK 4

Promoting server to domain

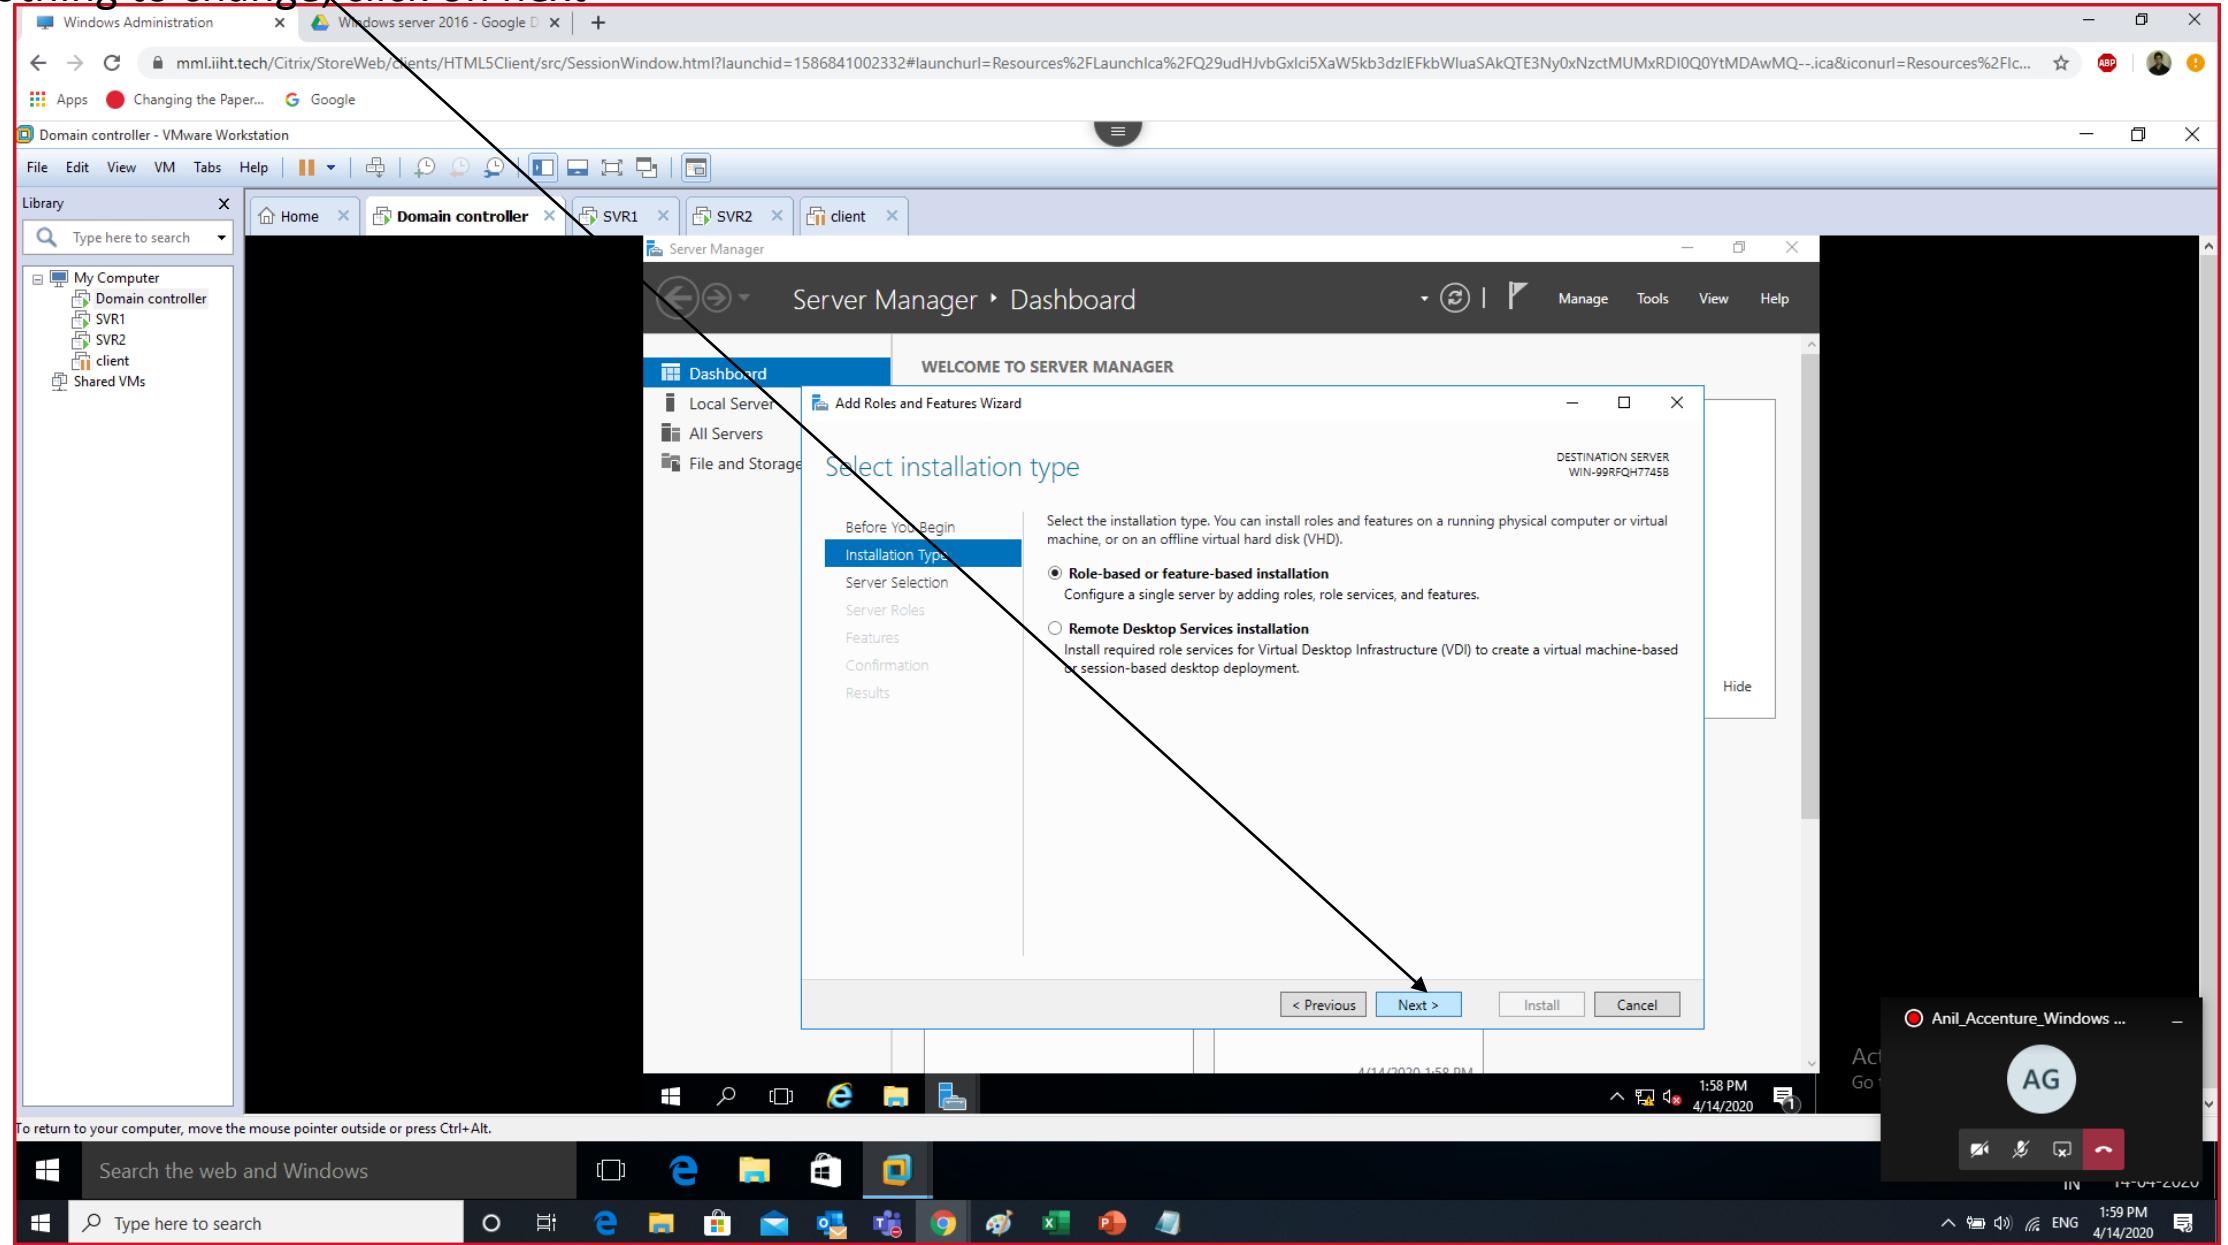

Click on Add roles and features

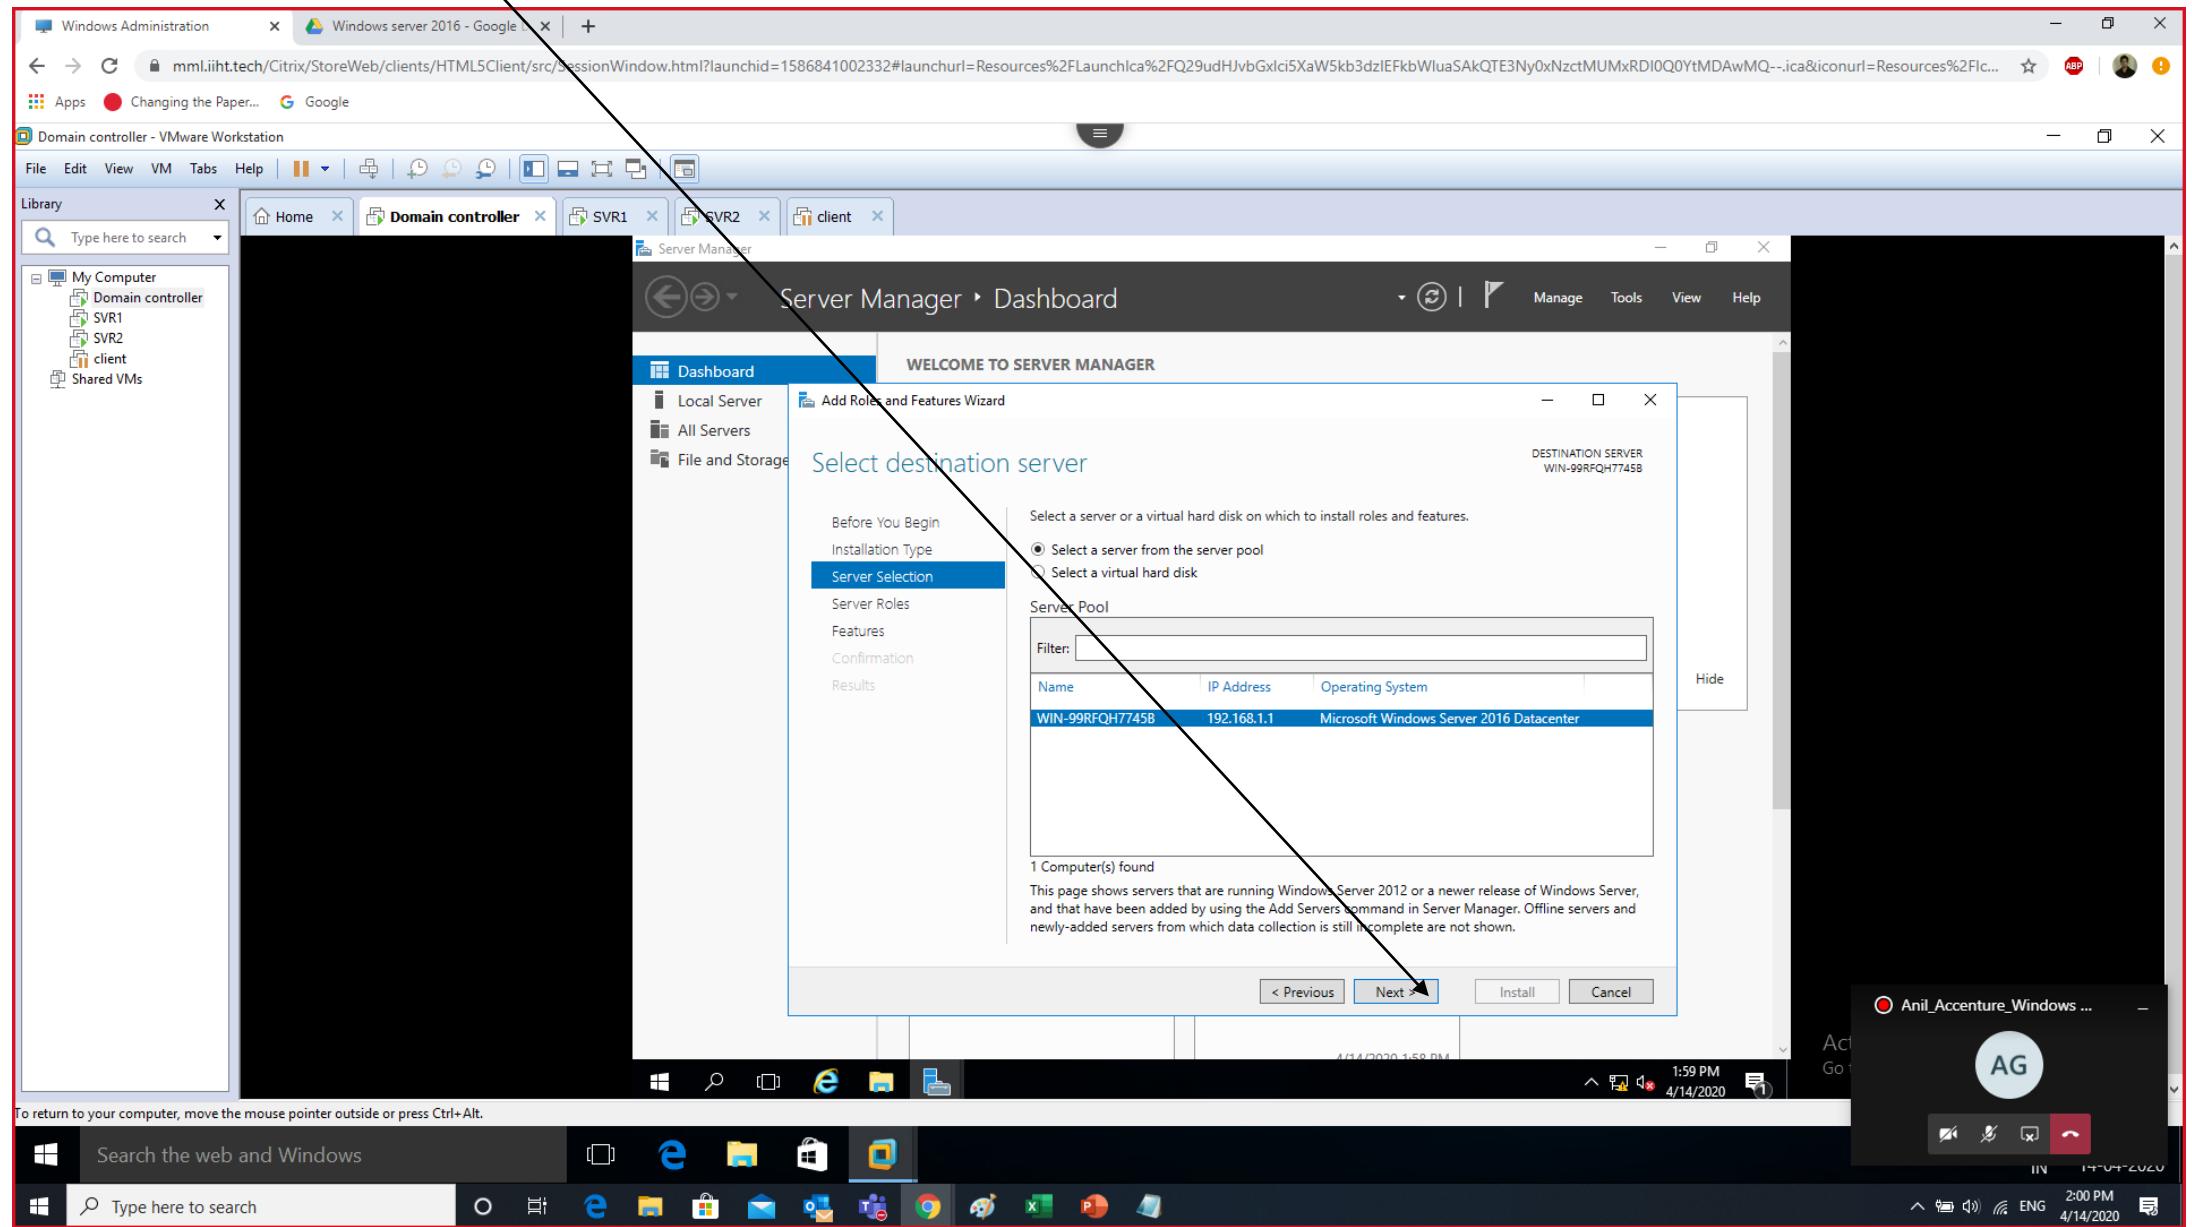

Just click next

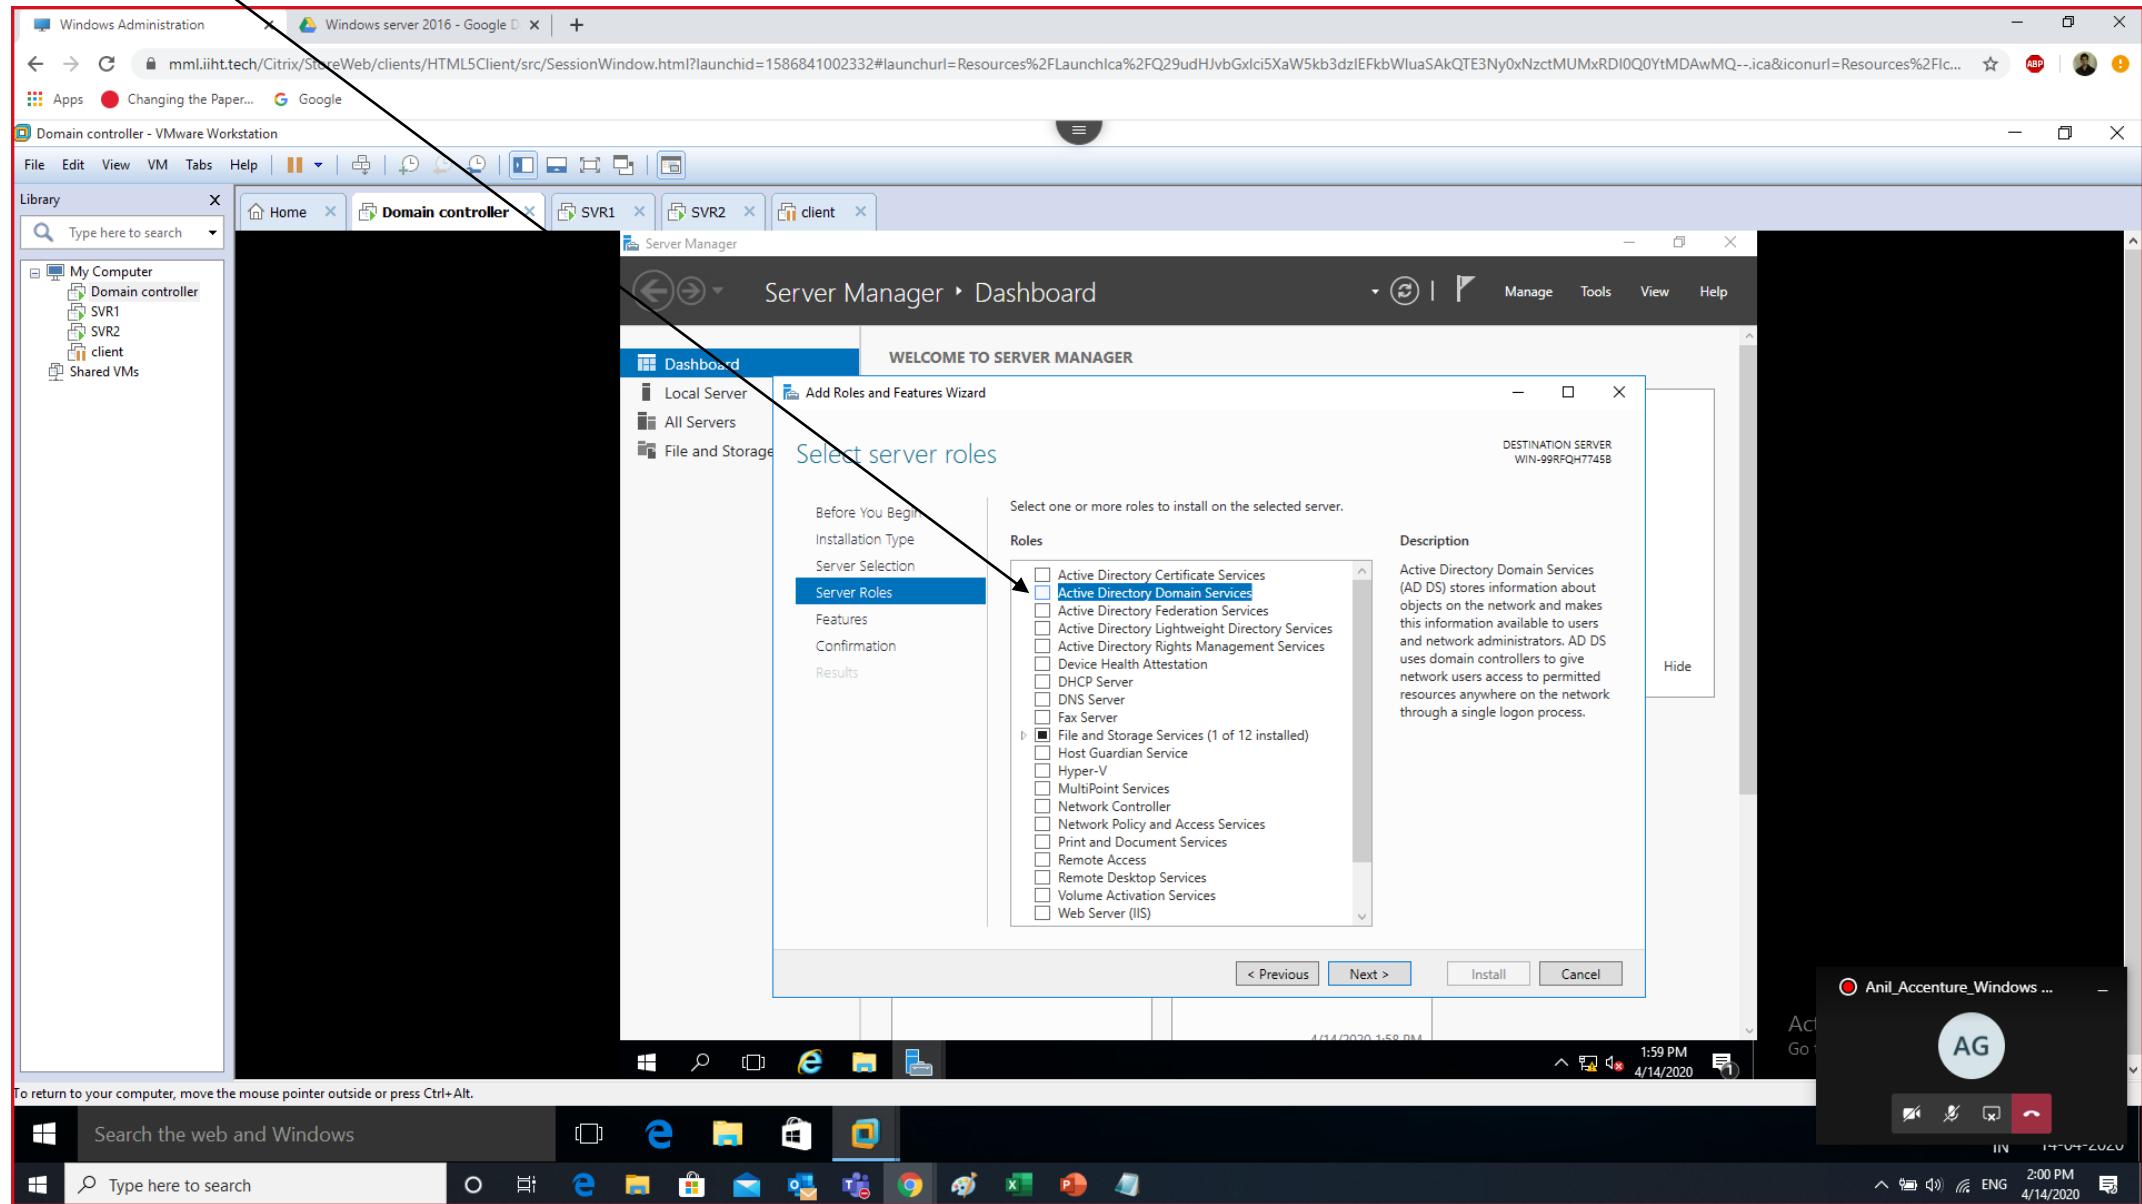

Nothing to change, click on next

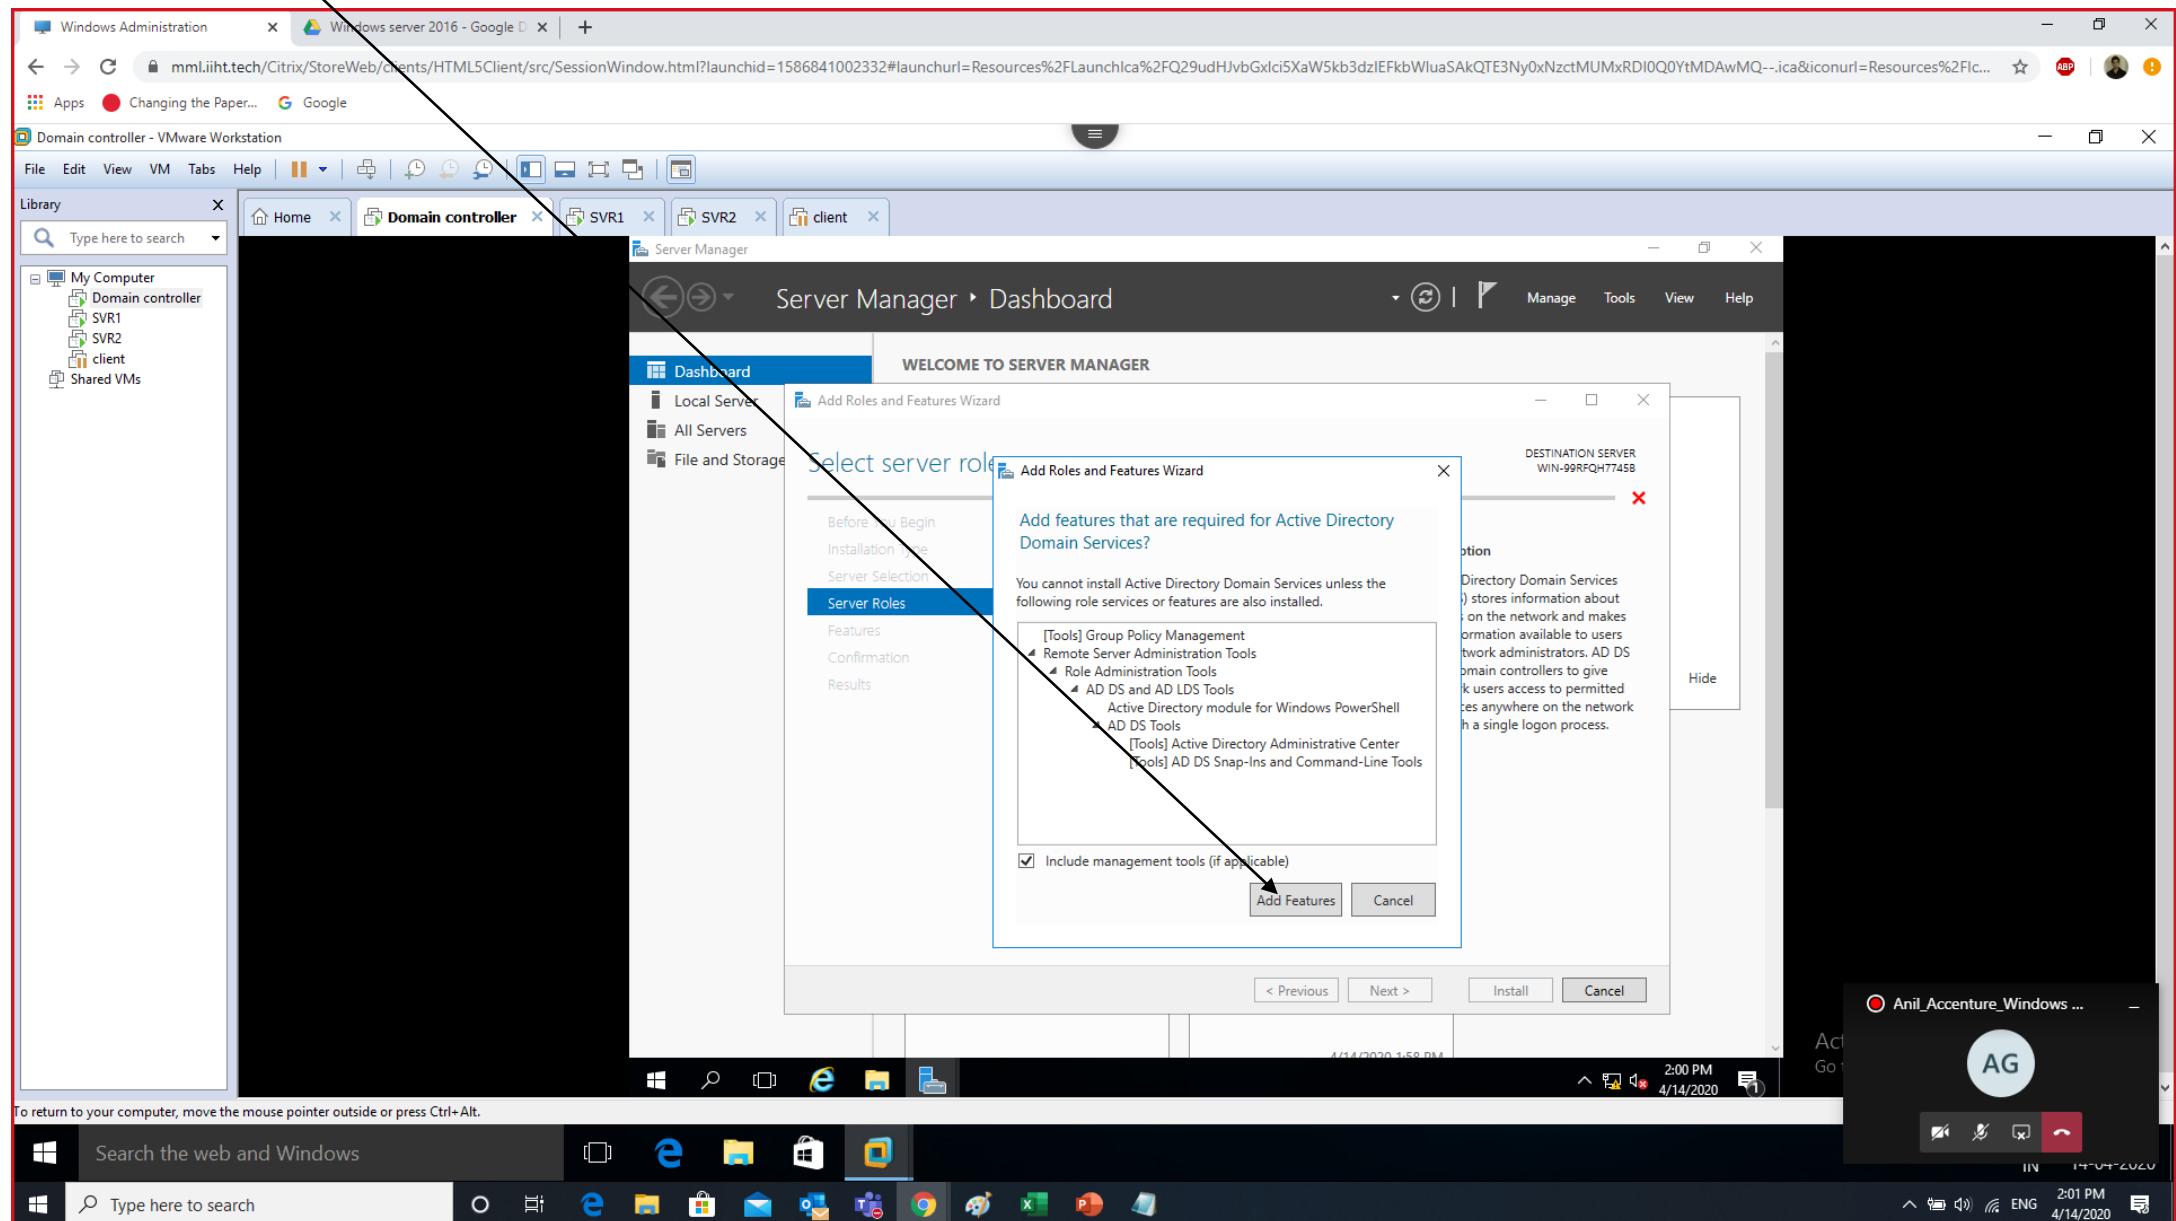

Nothing to change, click on next

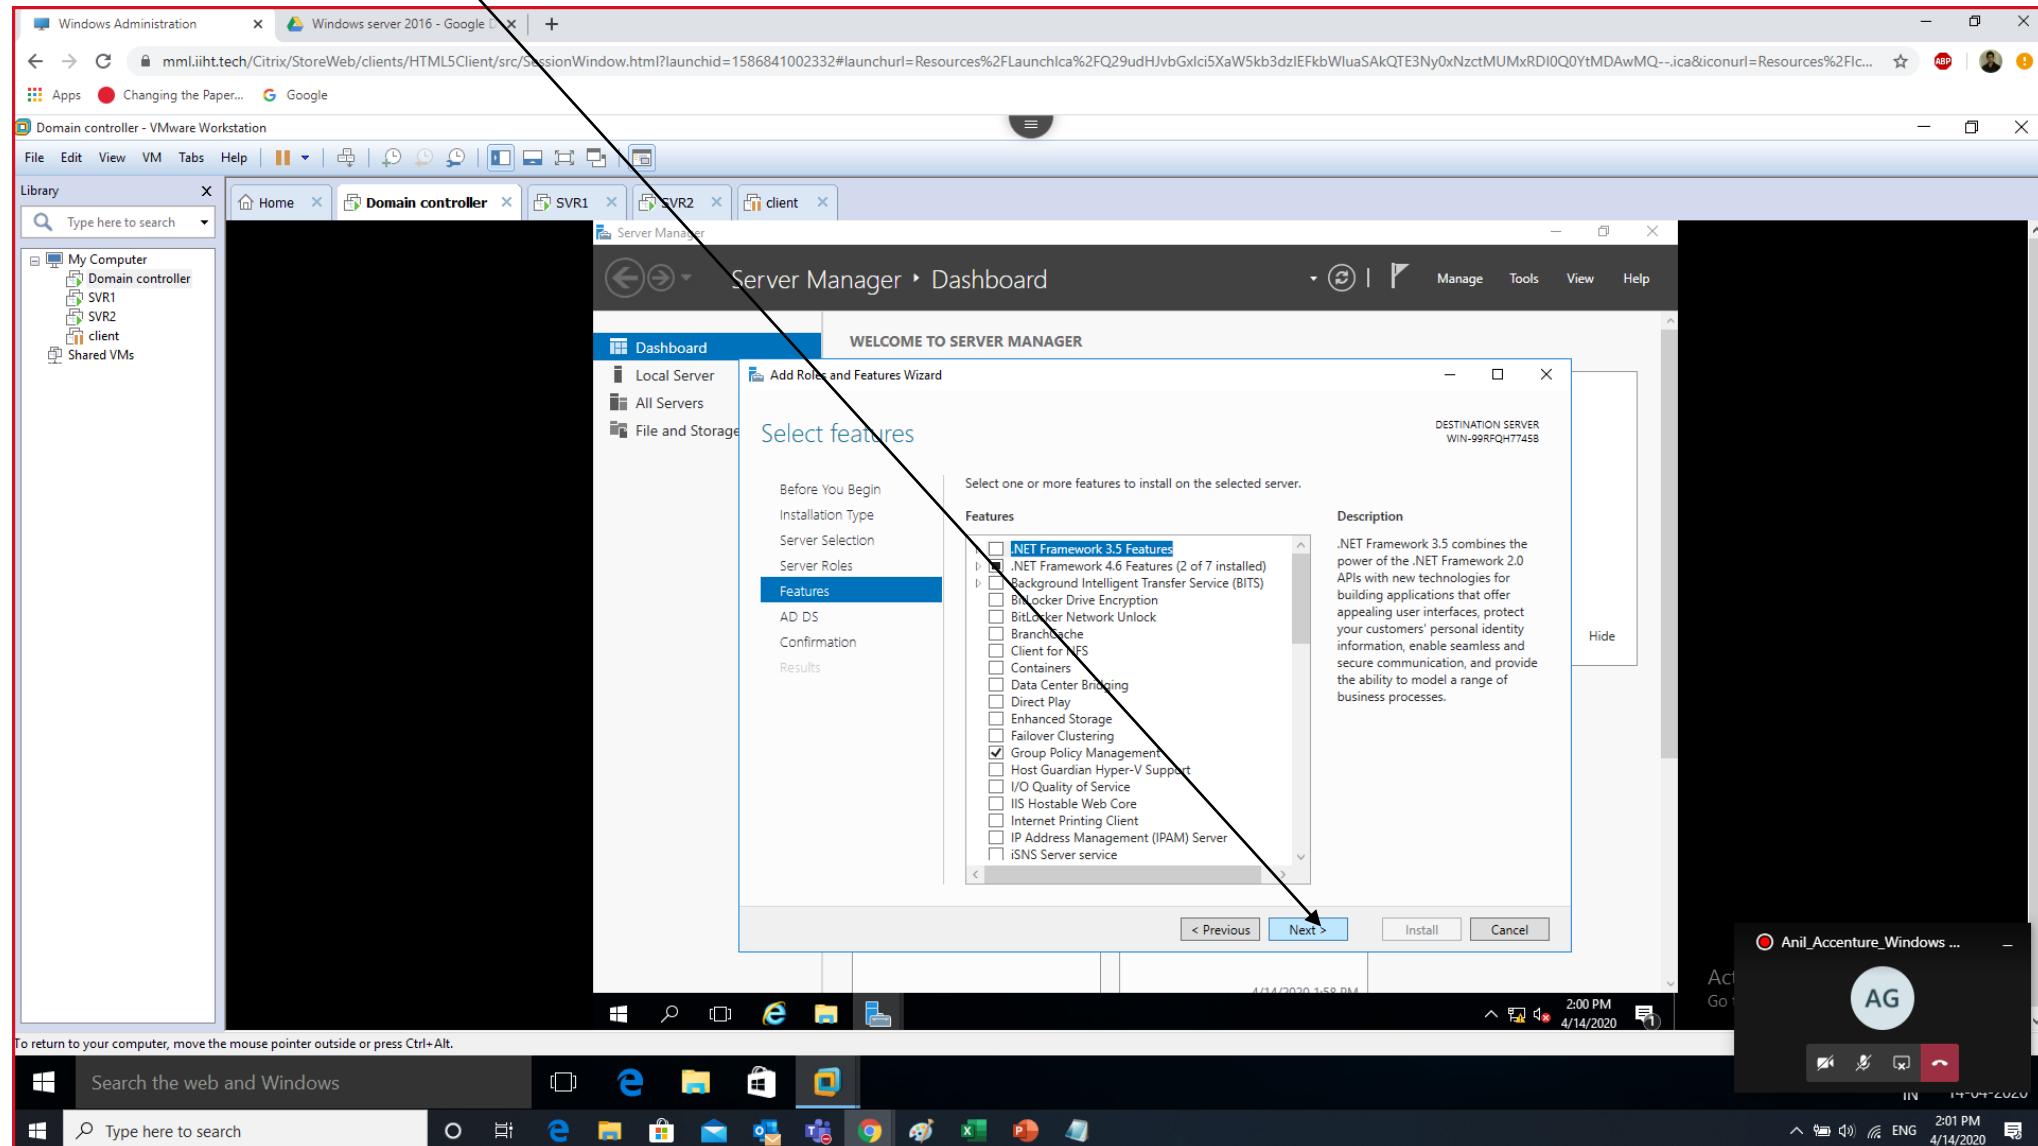

Select ADDS role (click the check box)

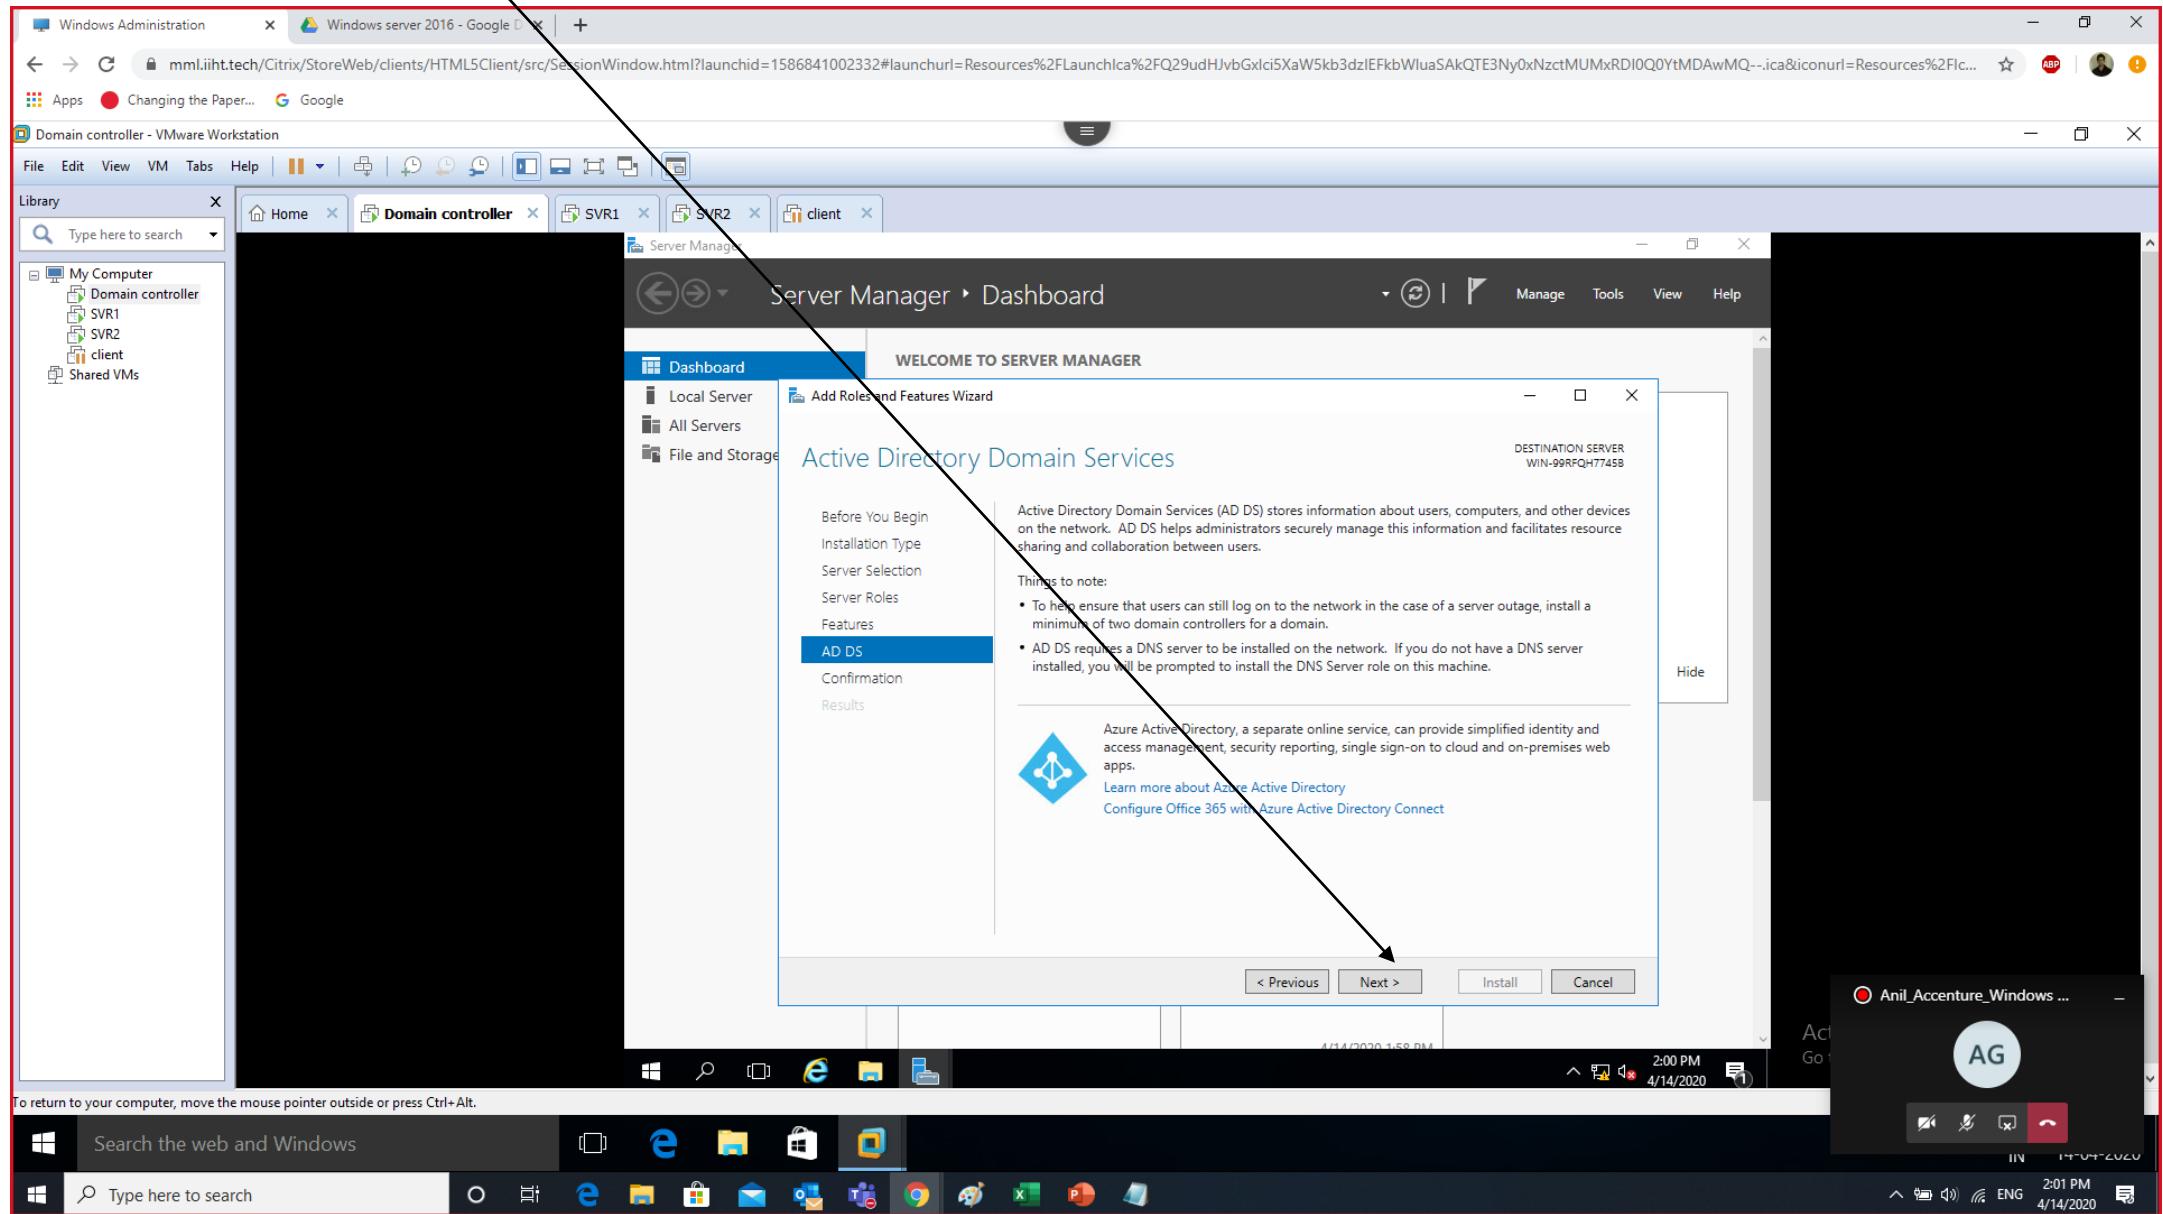

Click on Add features

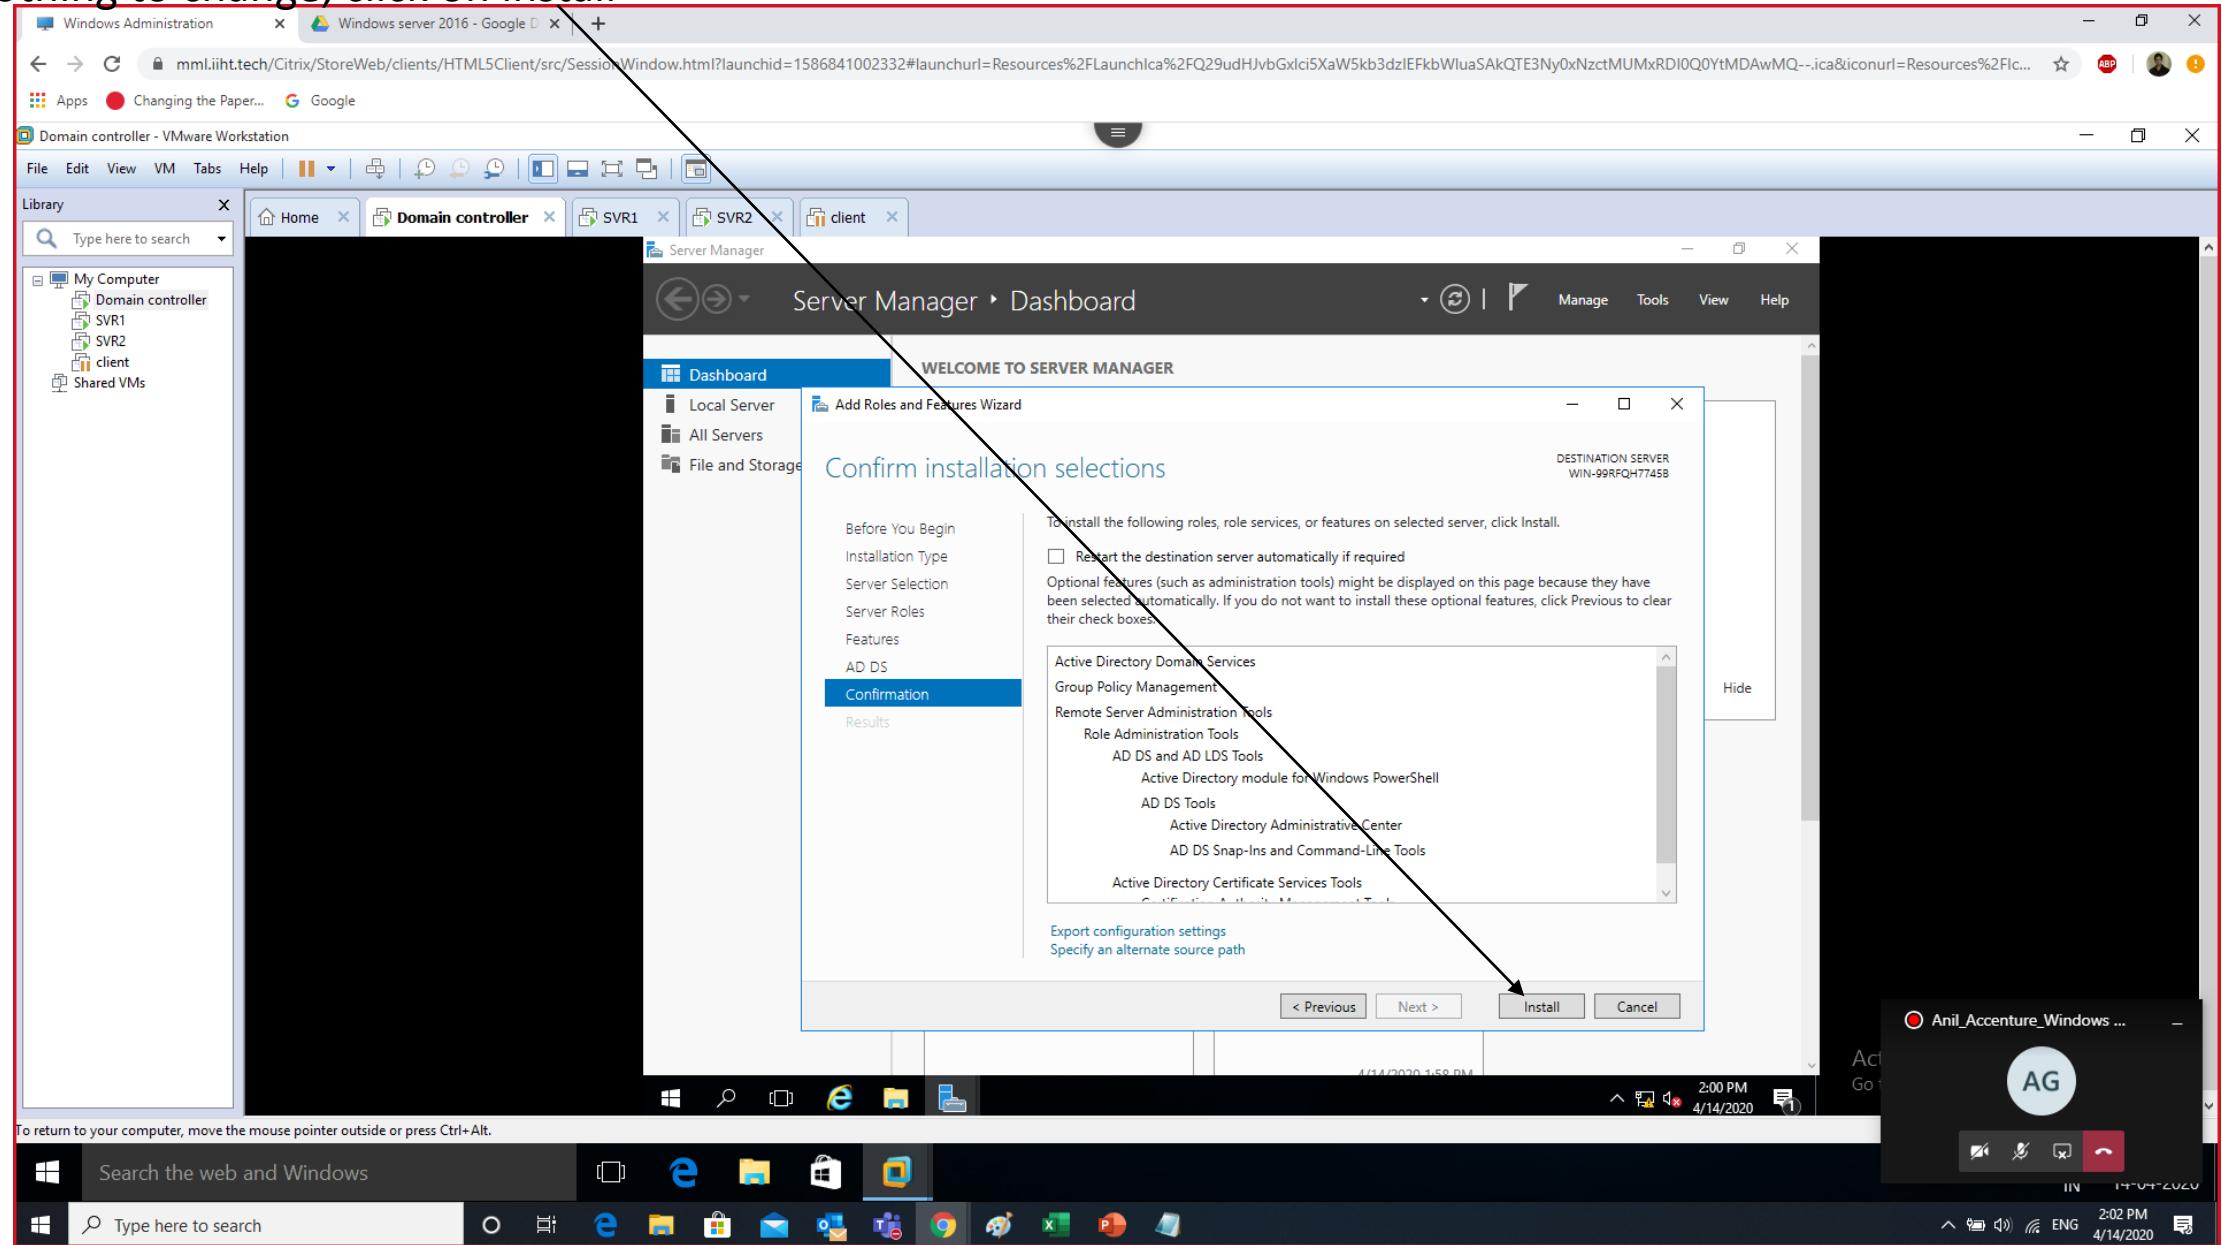

Nothing to change, click on next

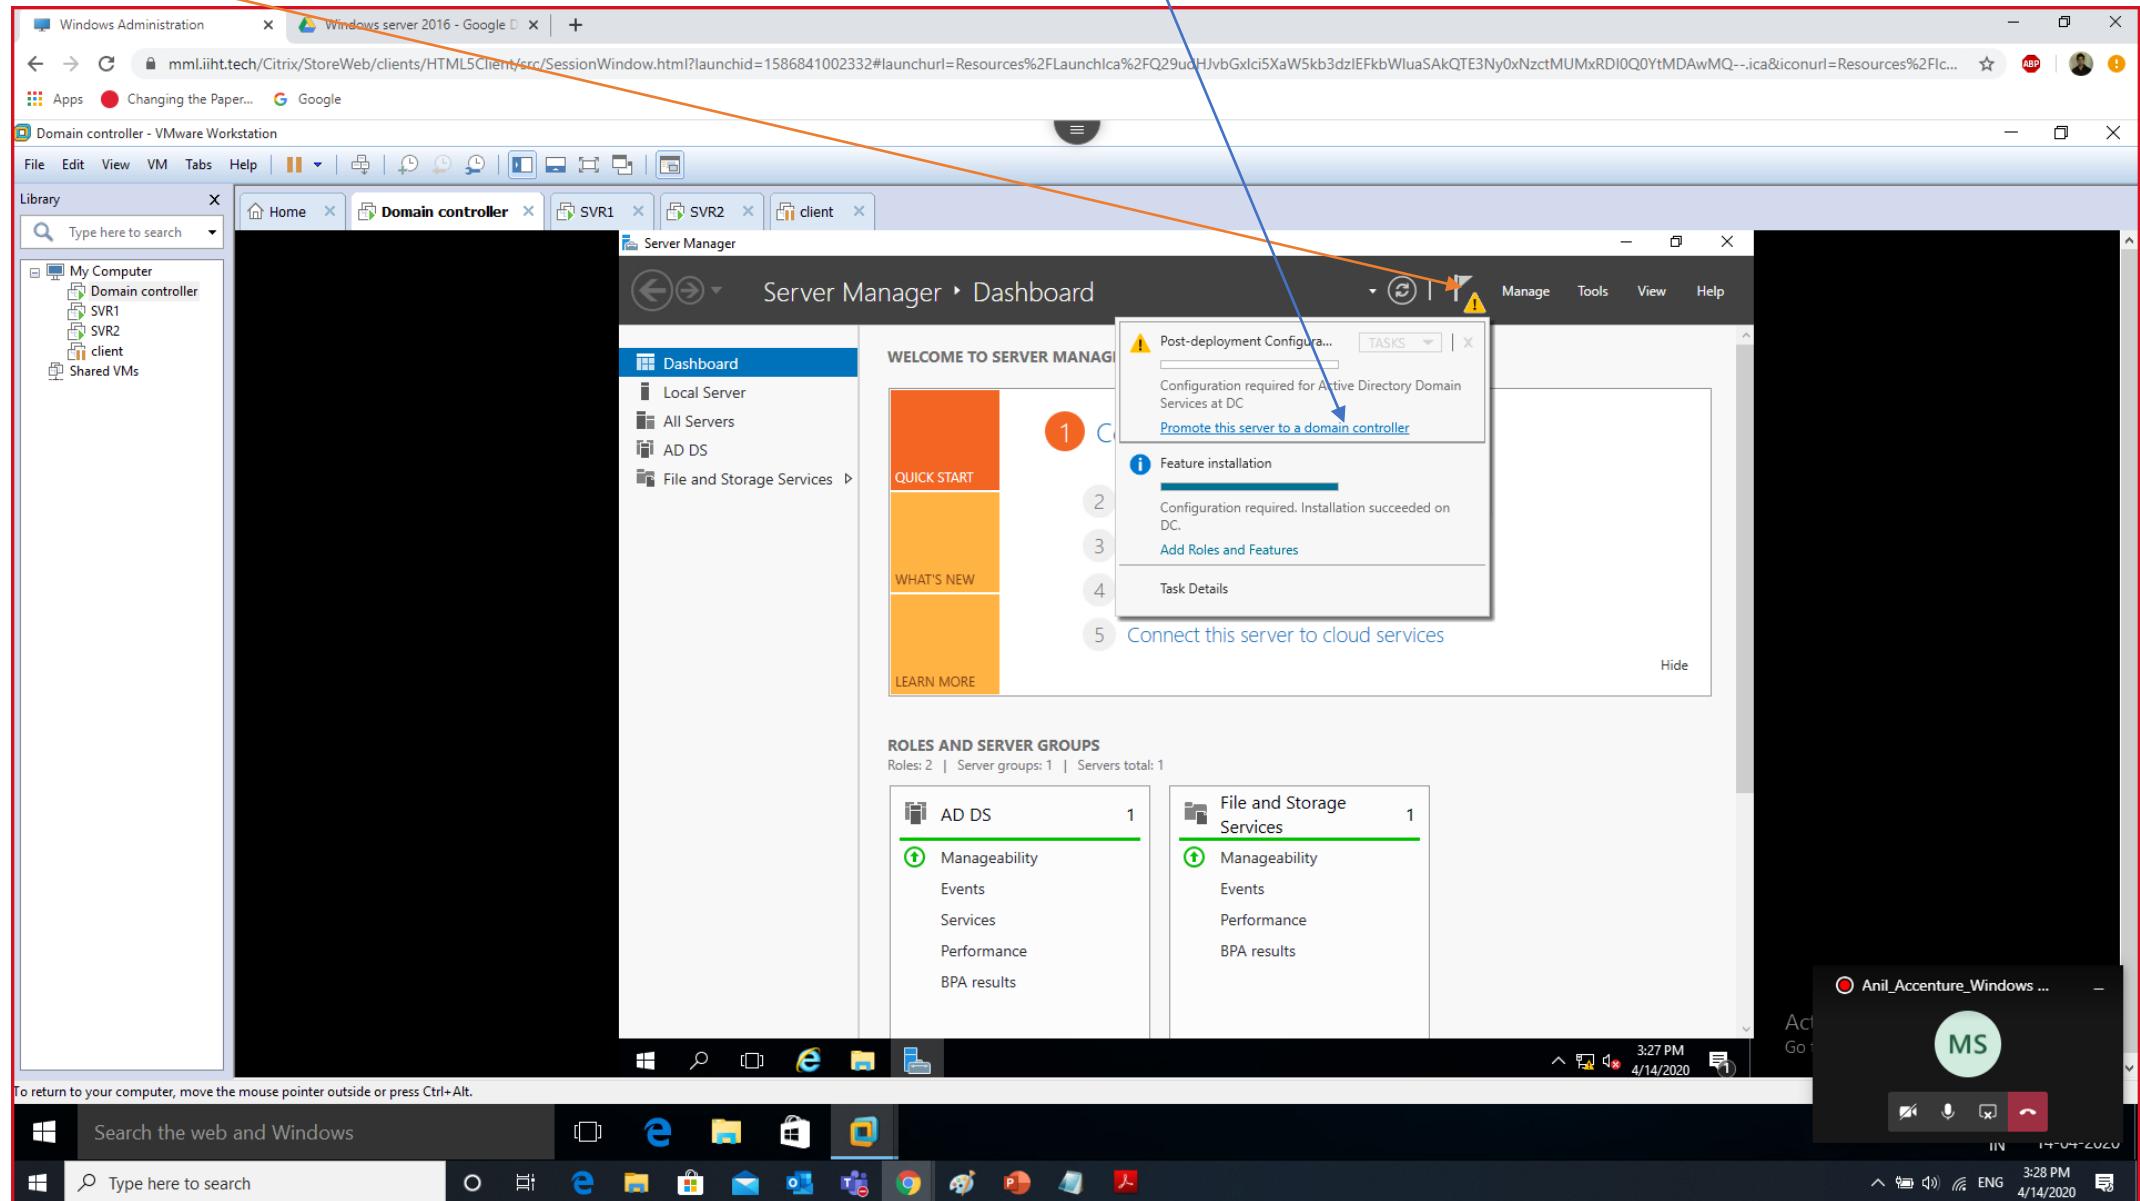

Nothing to change, click on next

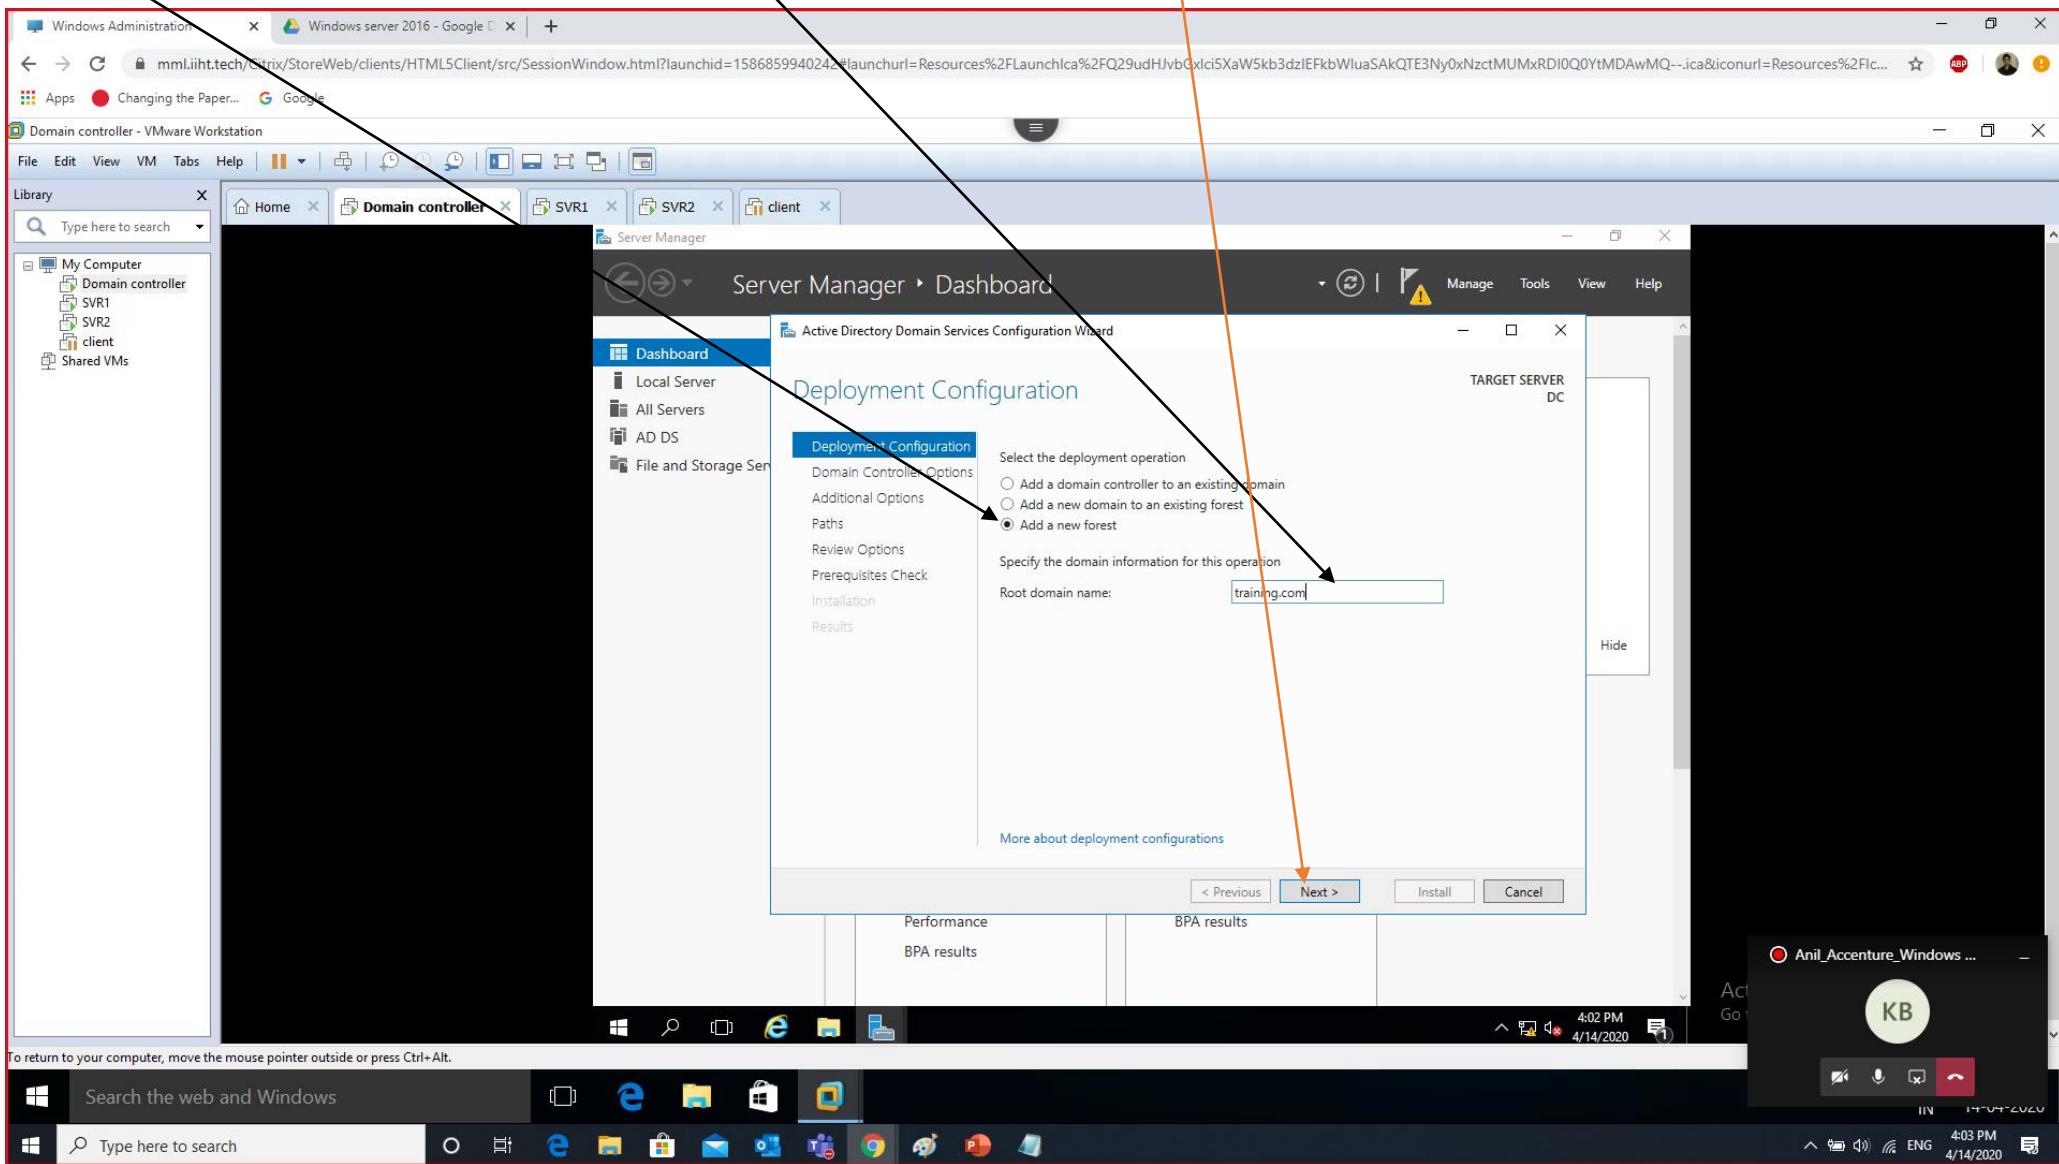

Nothing to change, click on install

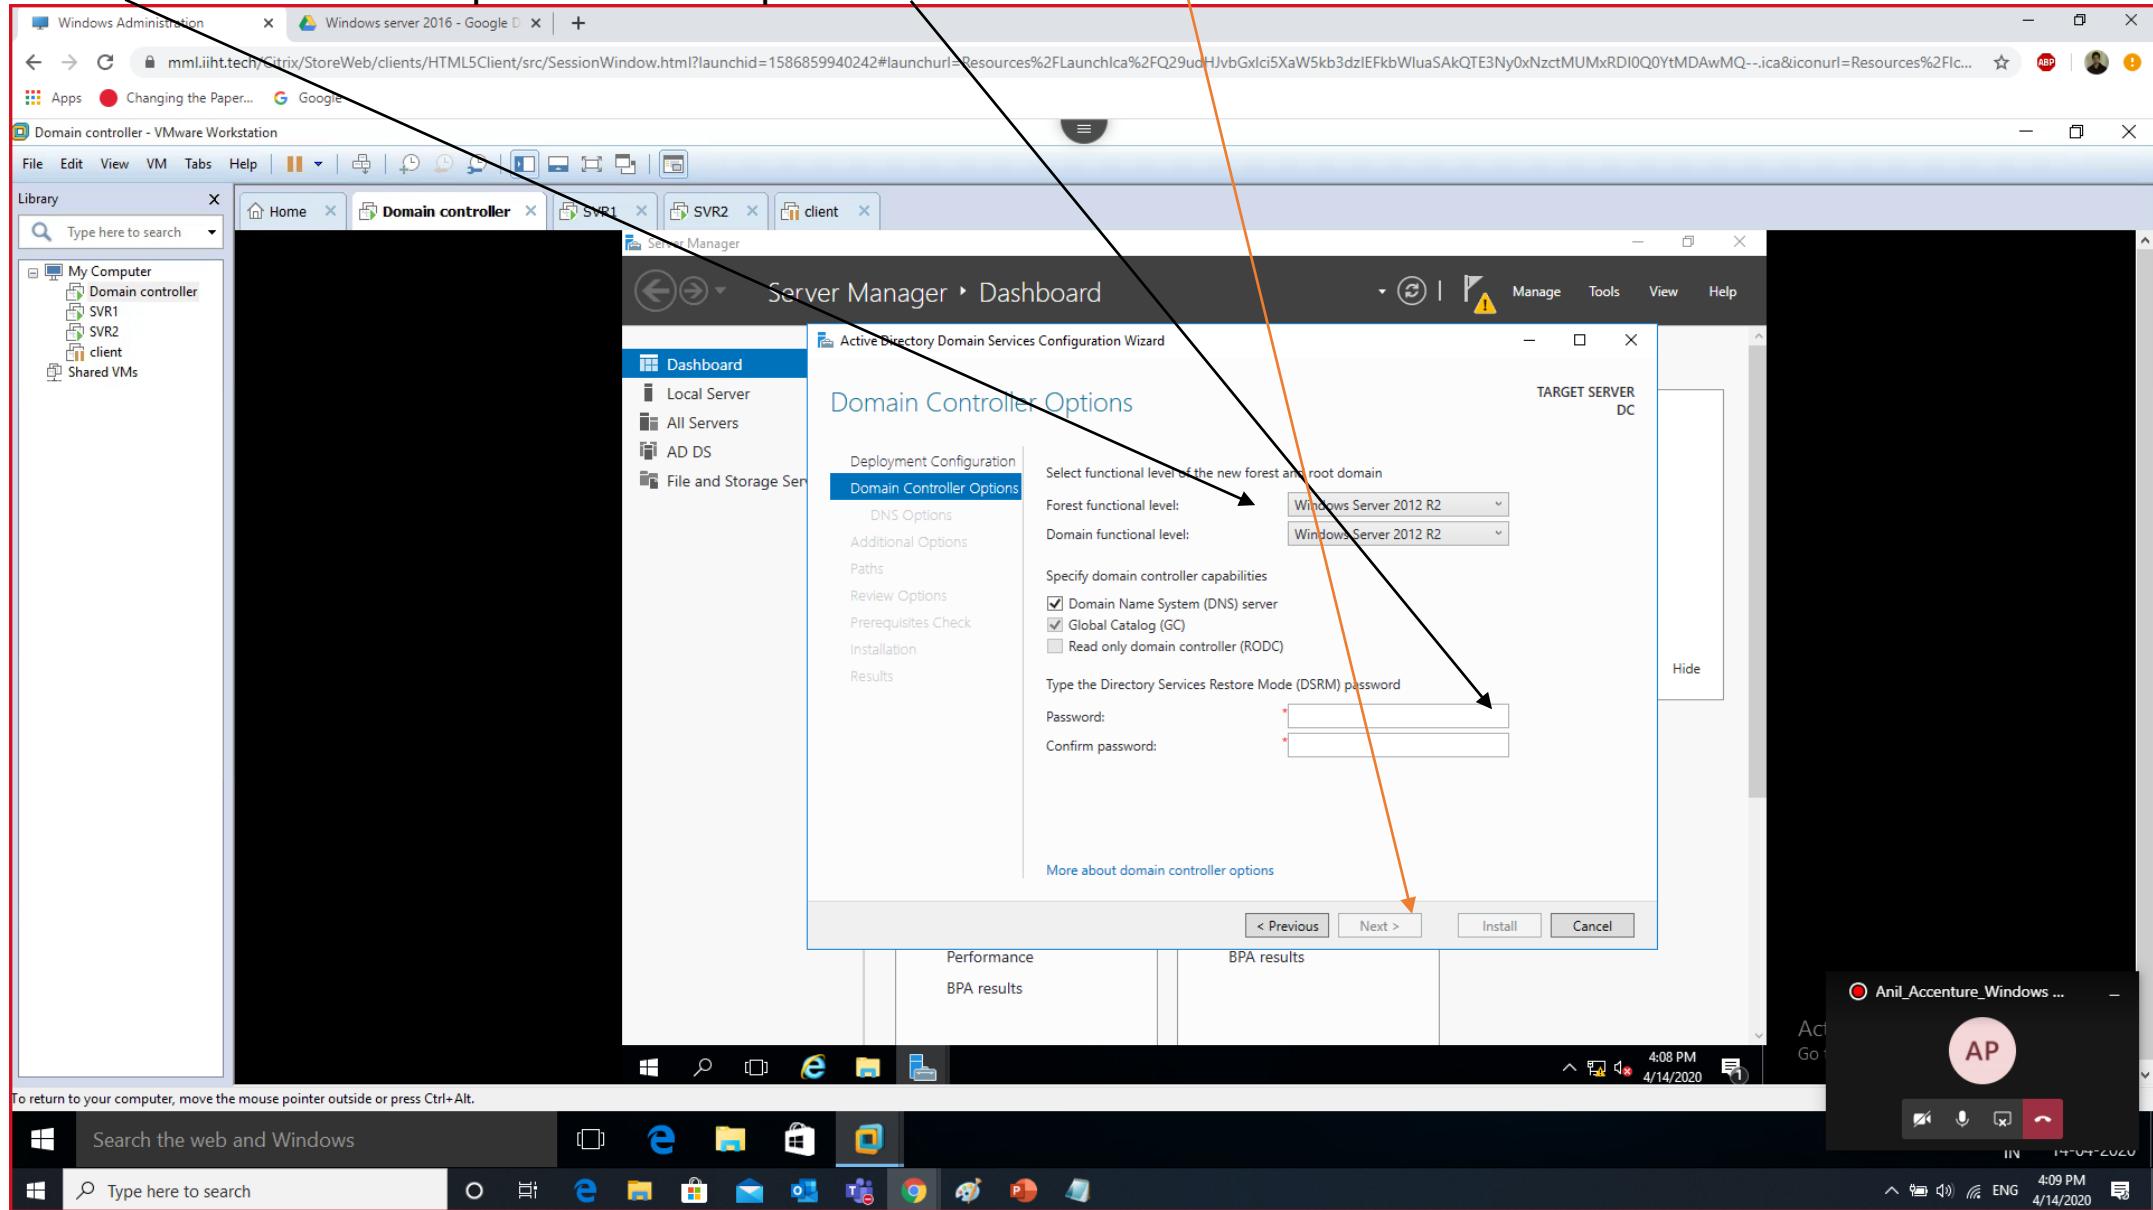

Click on the Flag and click on Promote this server to a domain controller

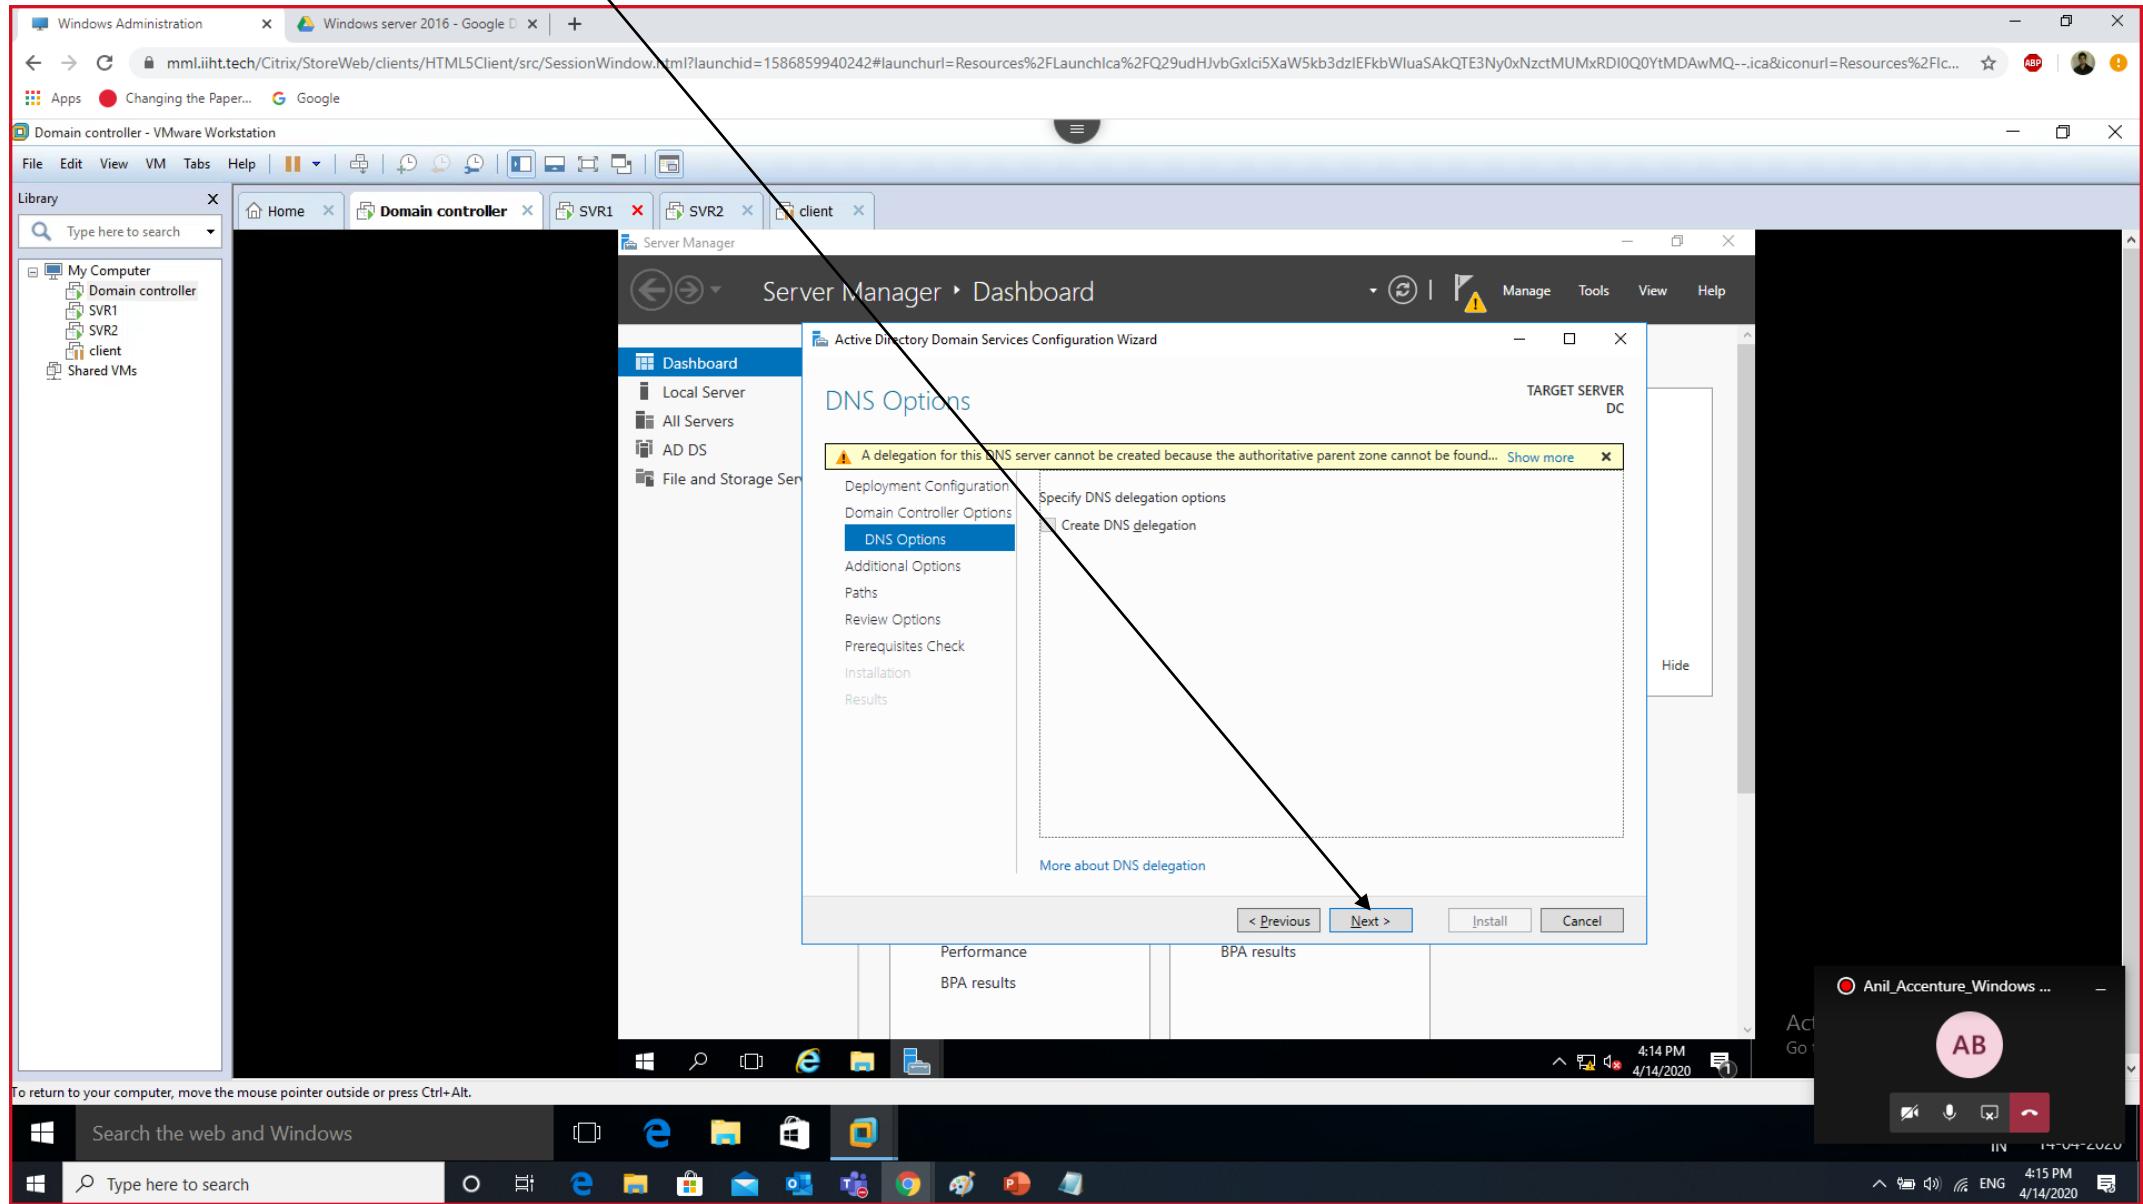

Select Add a new forest and fill the root domain name and click on next

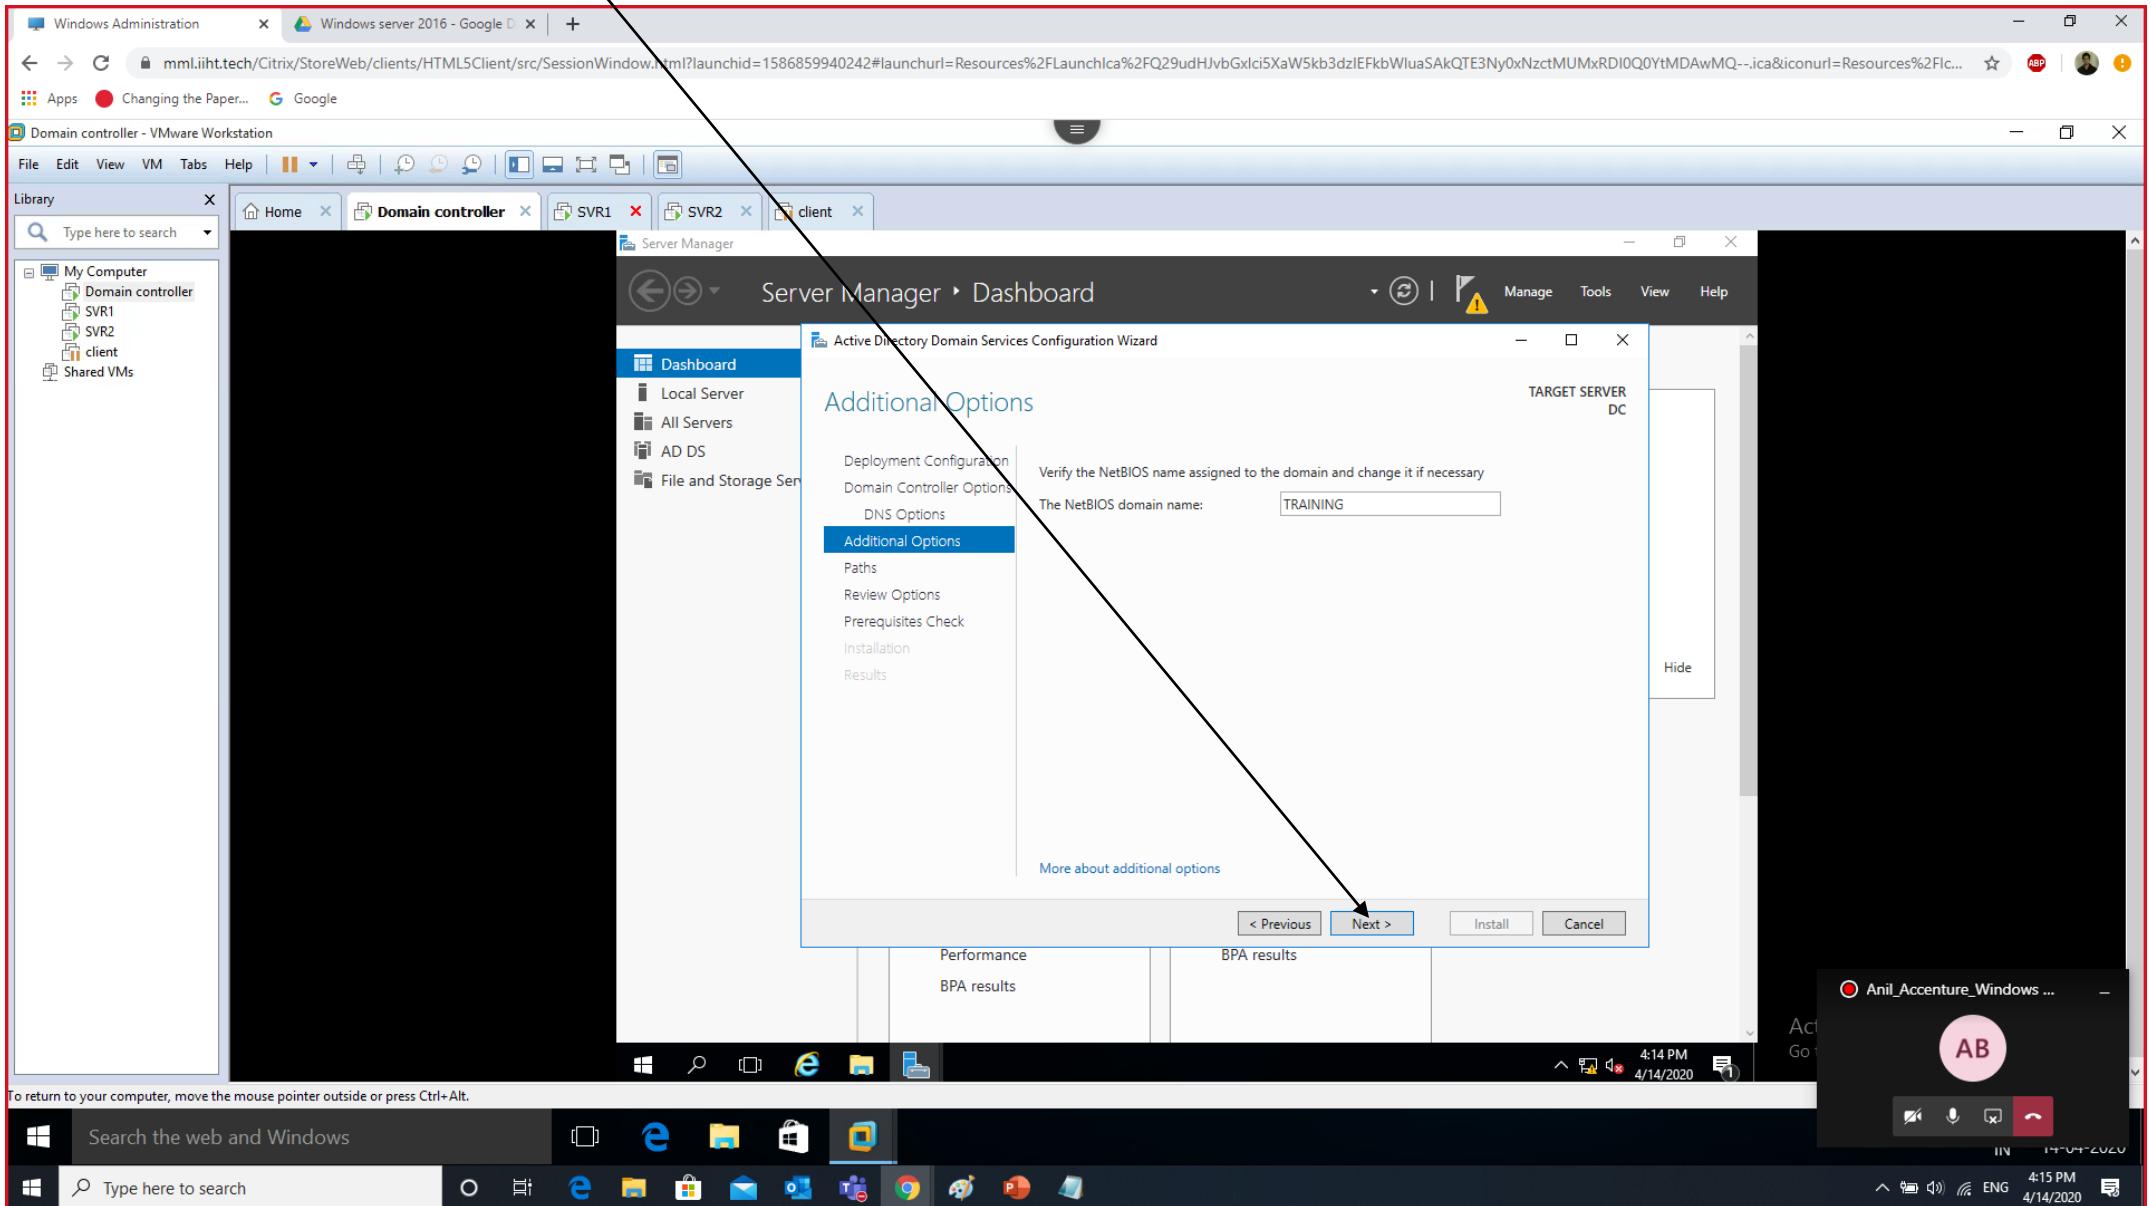

Select the functional level and provide DSRM password and click next

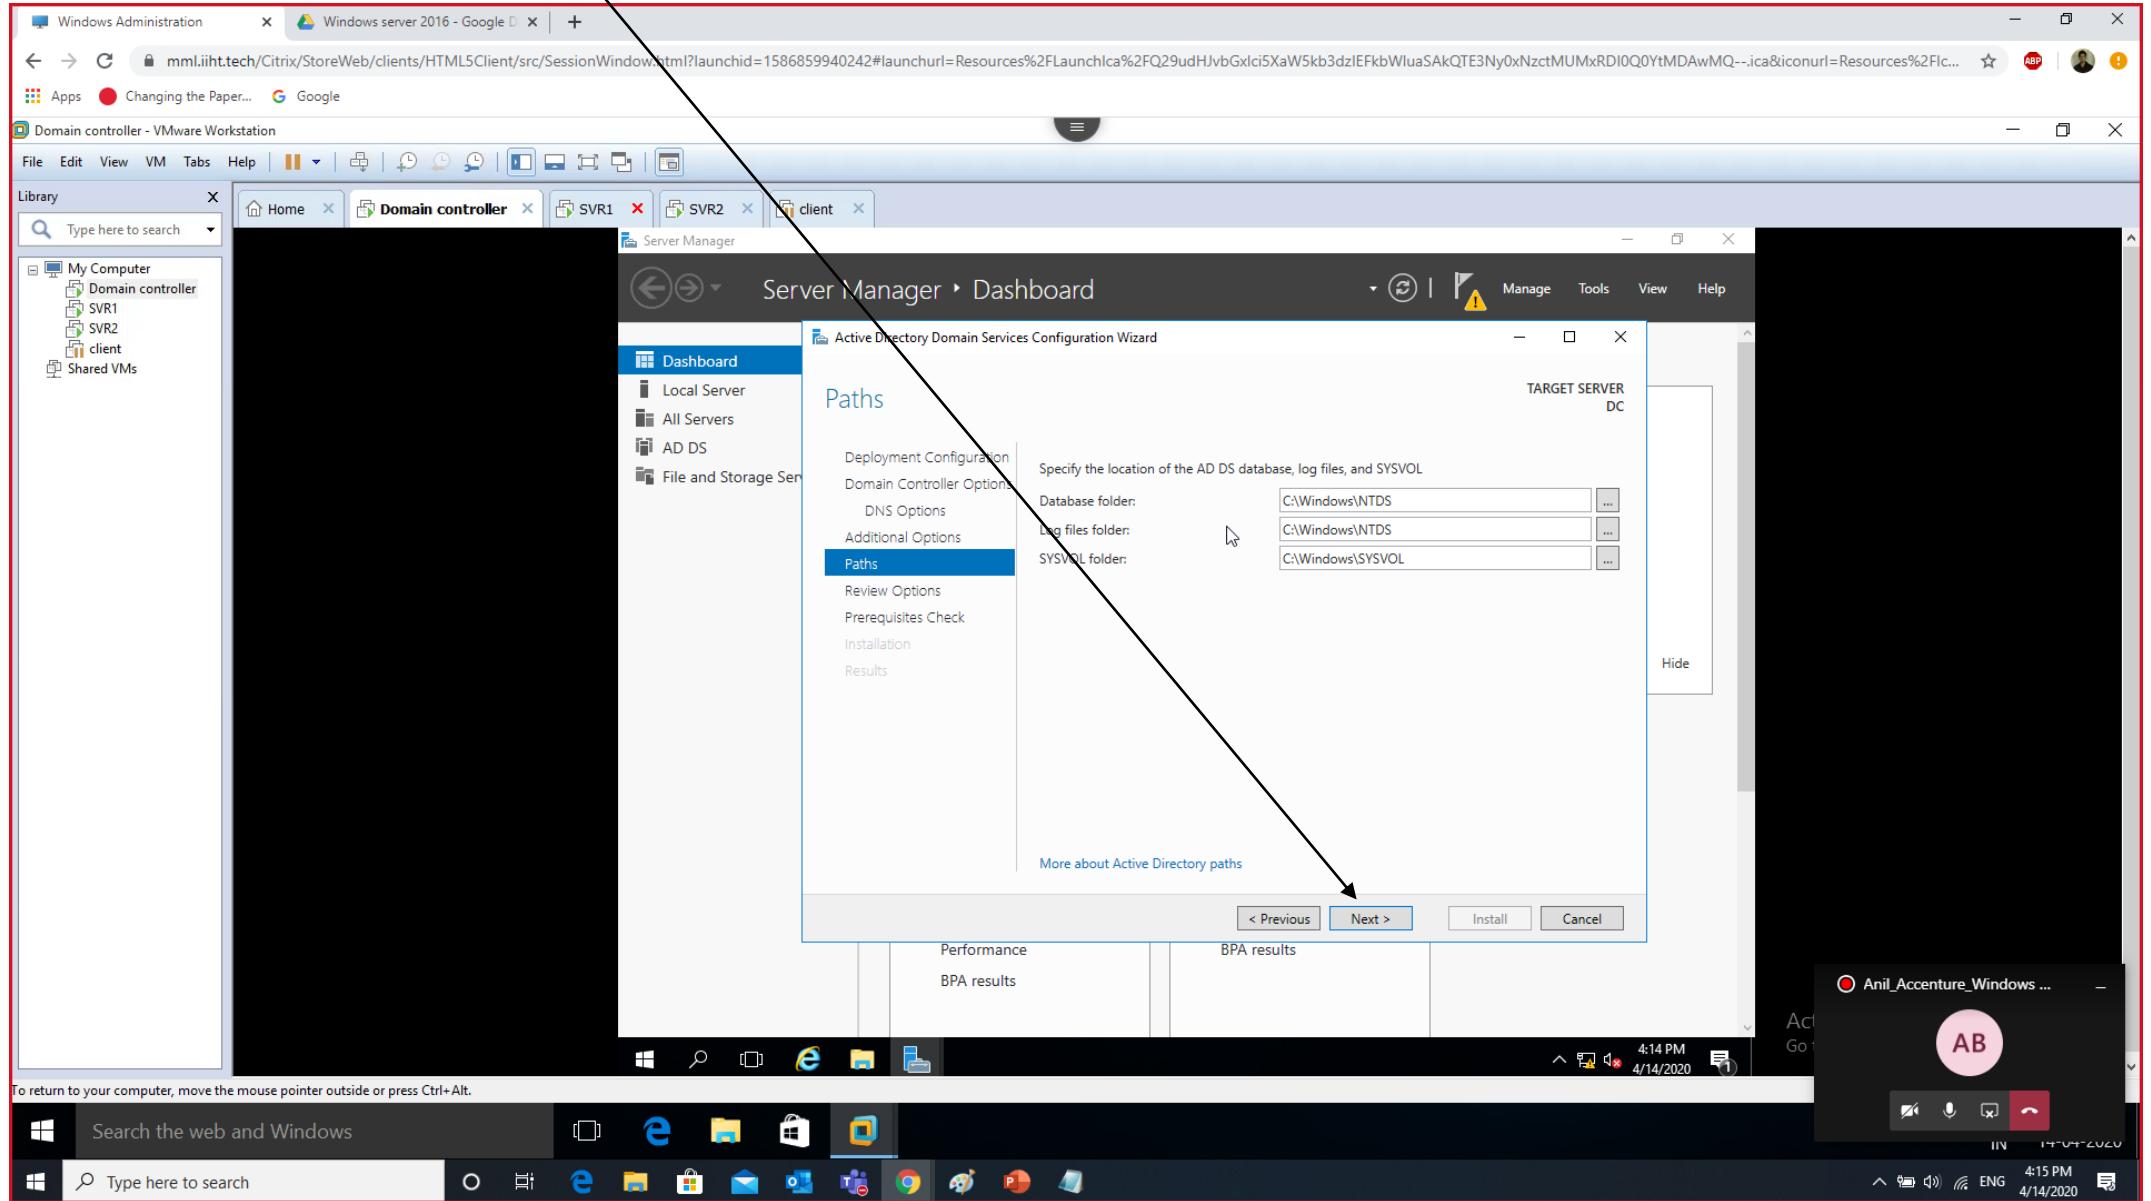

Nothing to change on this, just click next

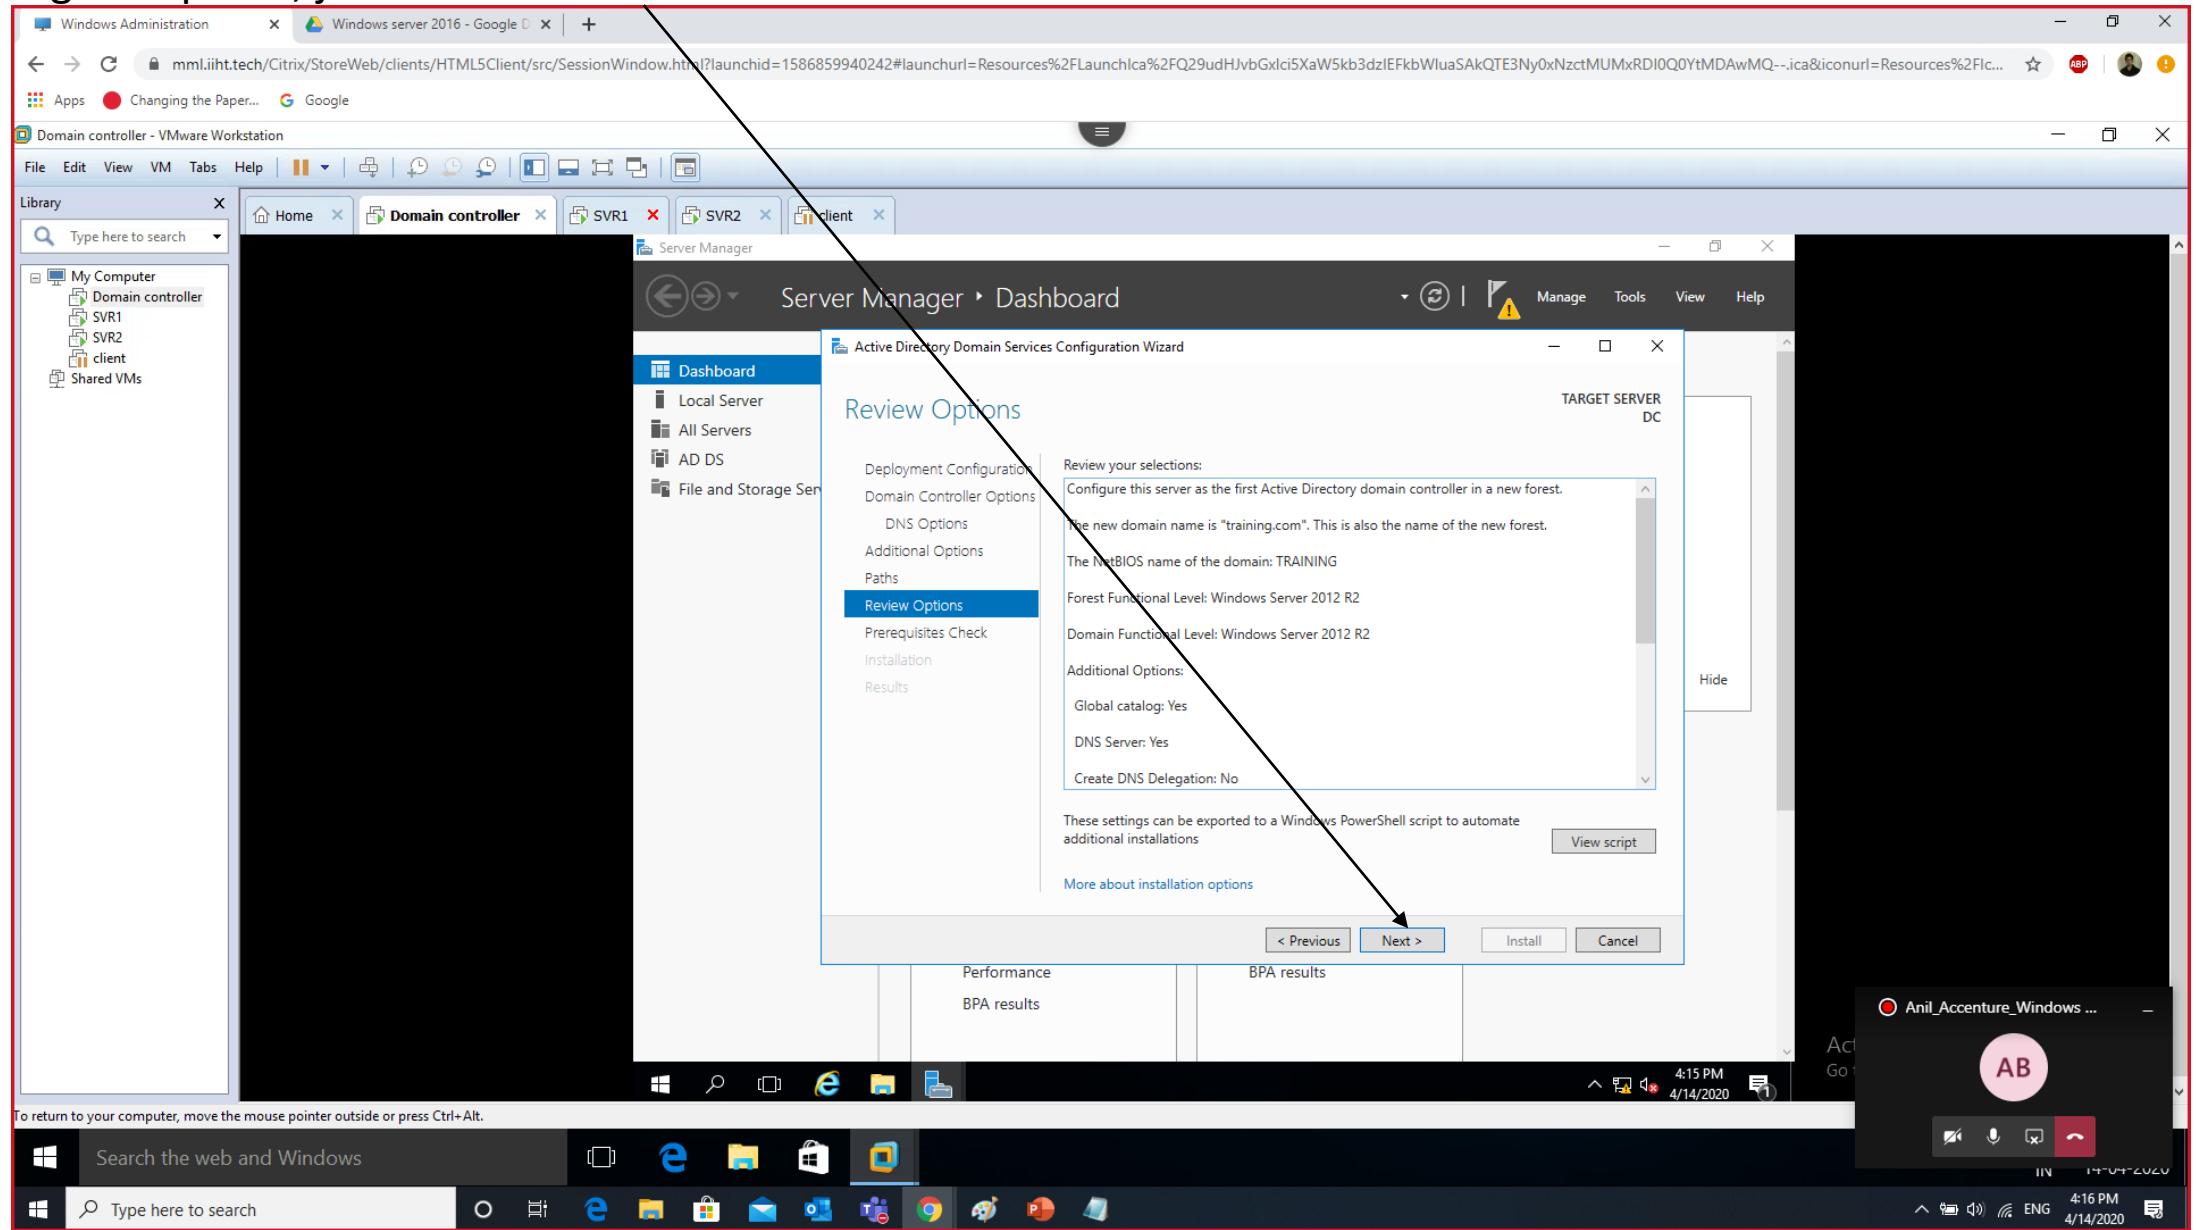

No changes required, just click on Next

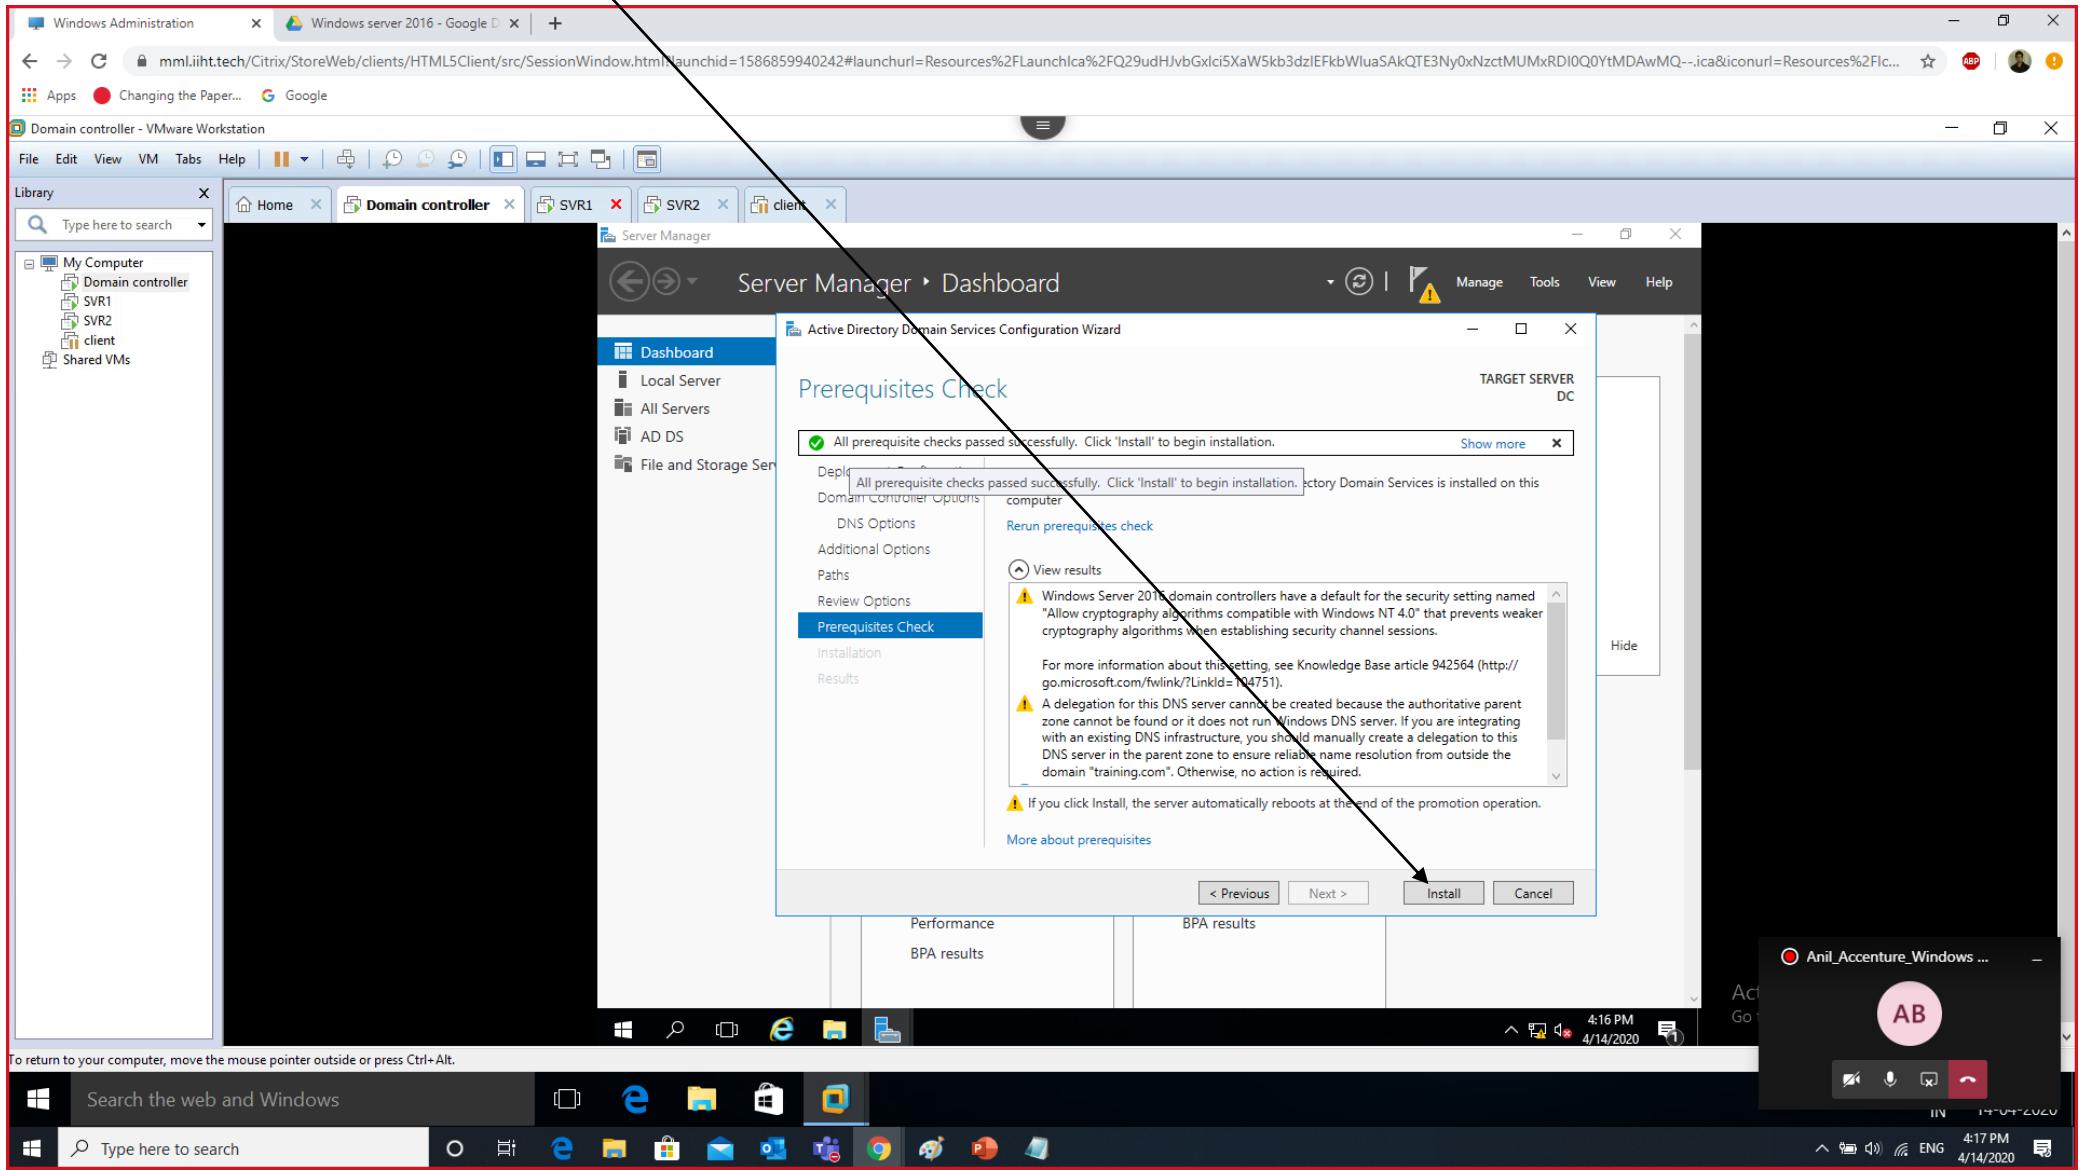

No changes required, just click on Next

No changes required, just click on Next

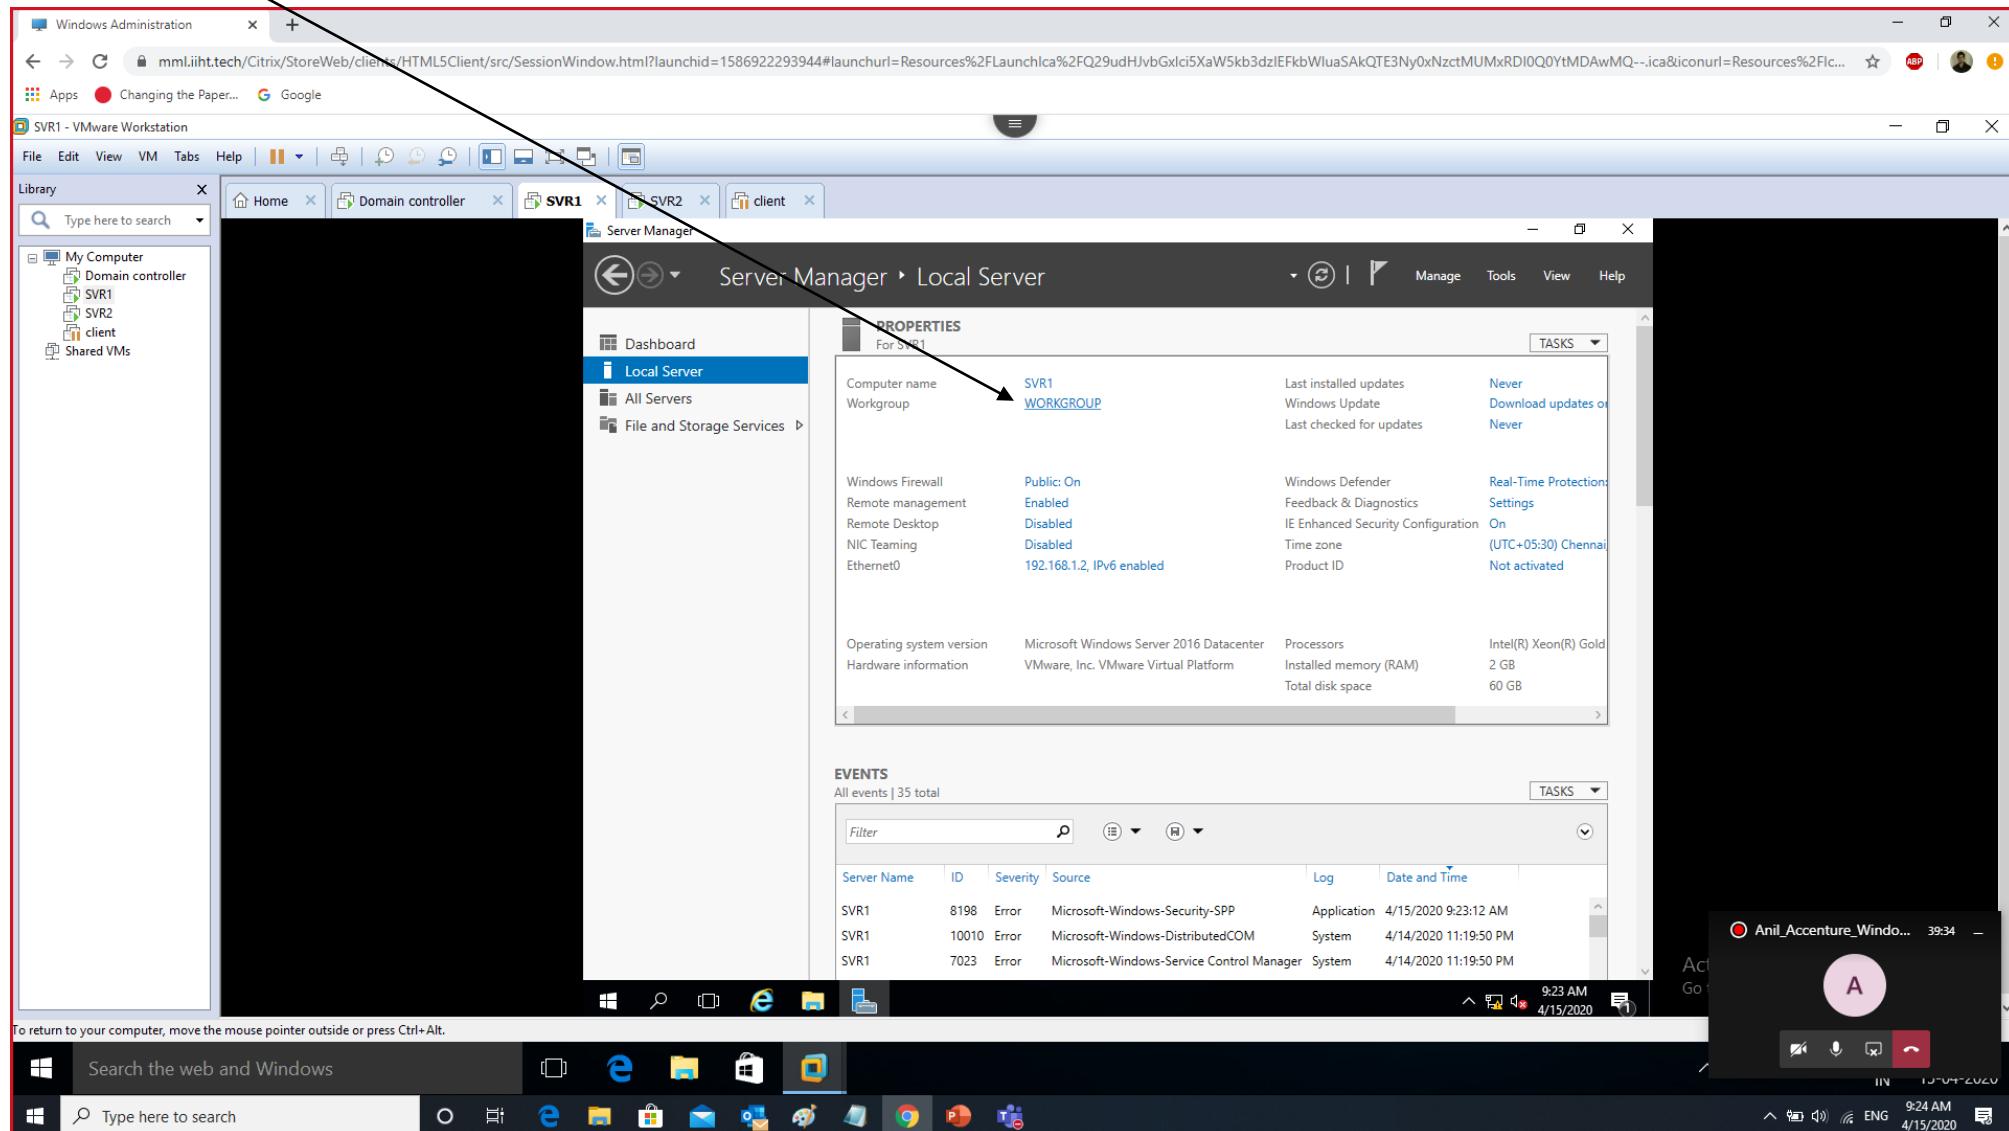

No changes required, just click on Install

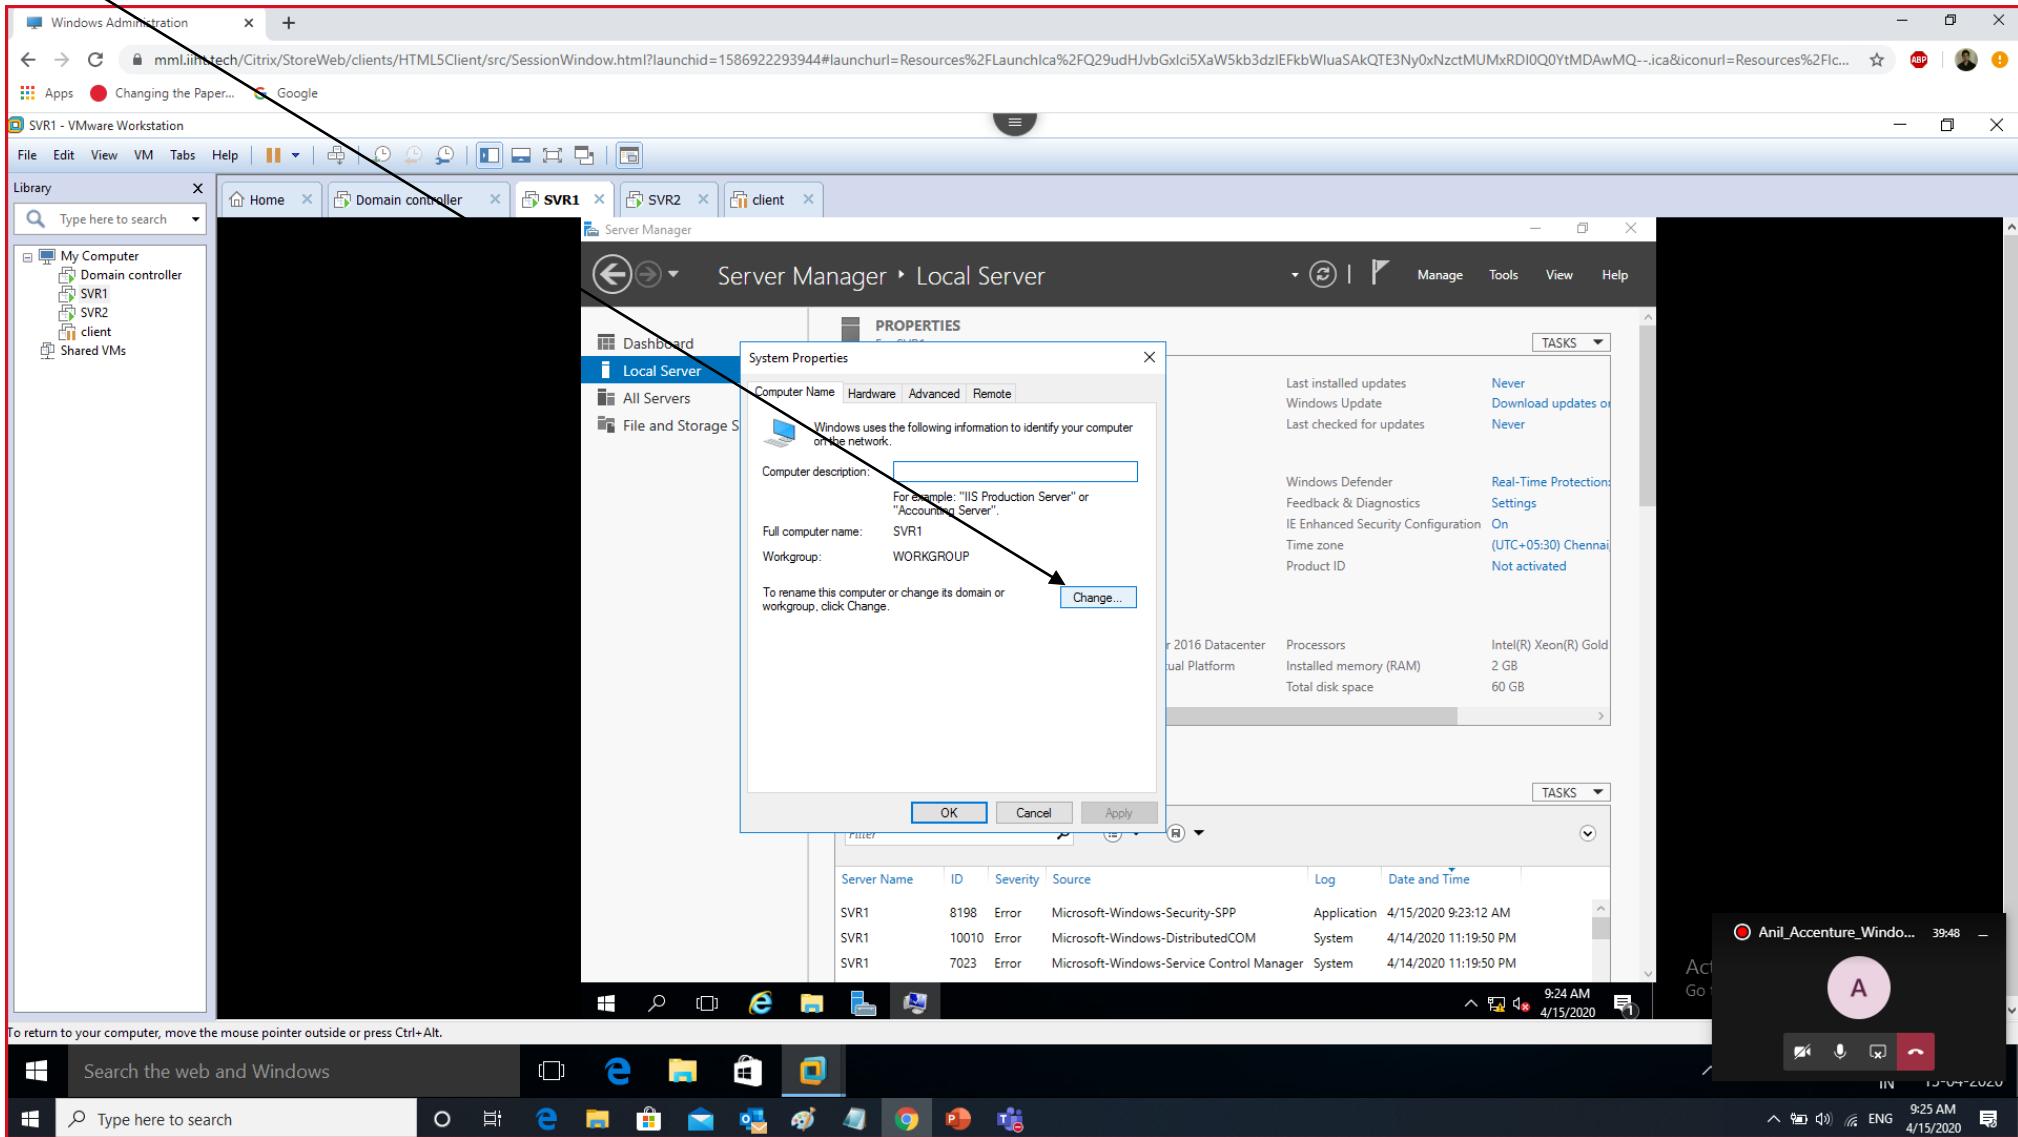

TASK 5:
Joining a Machine to Domain

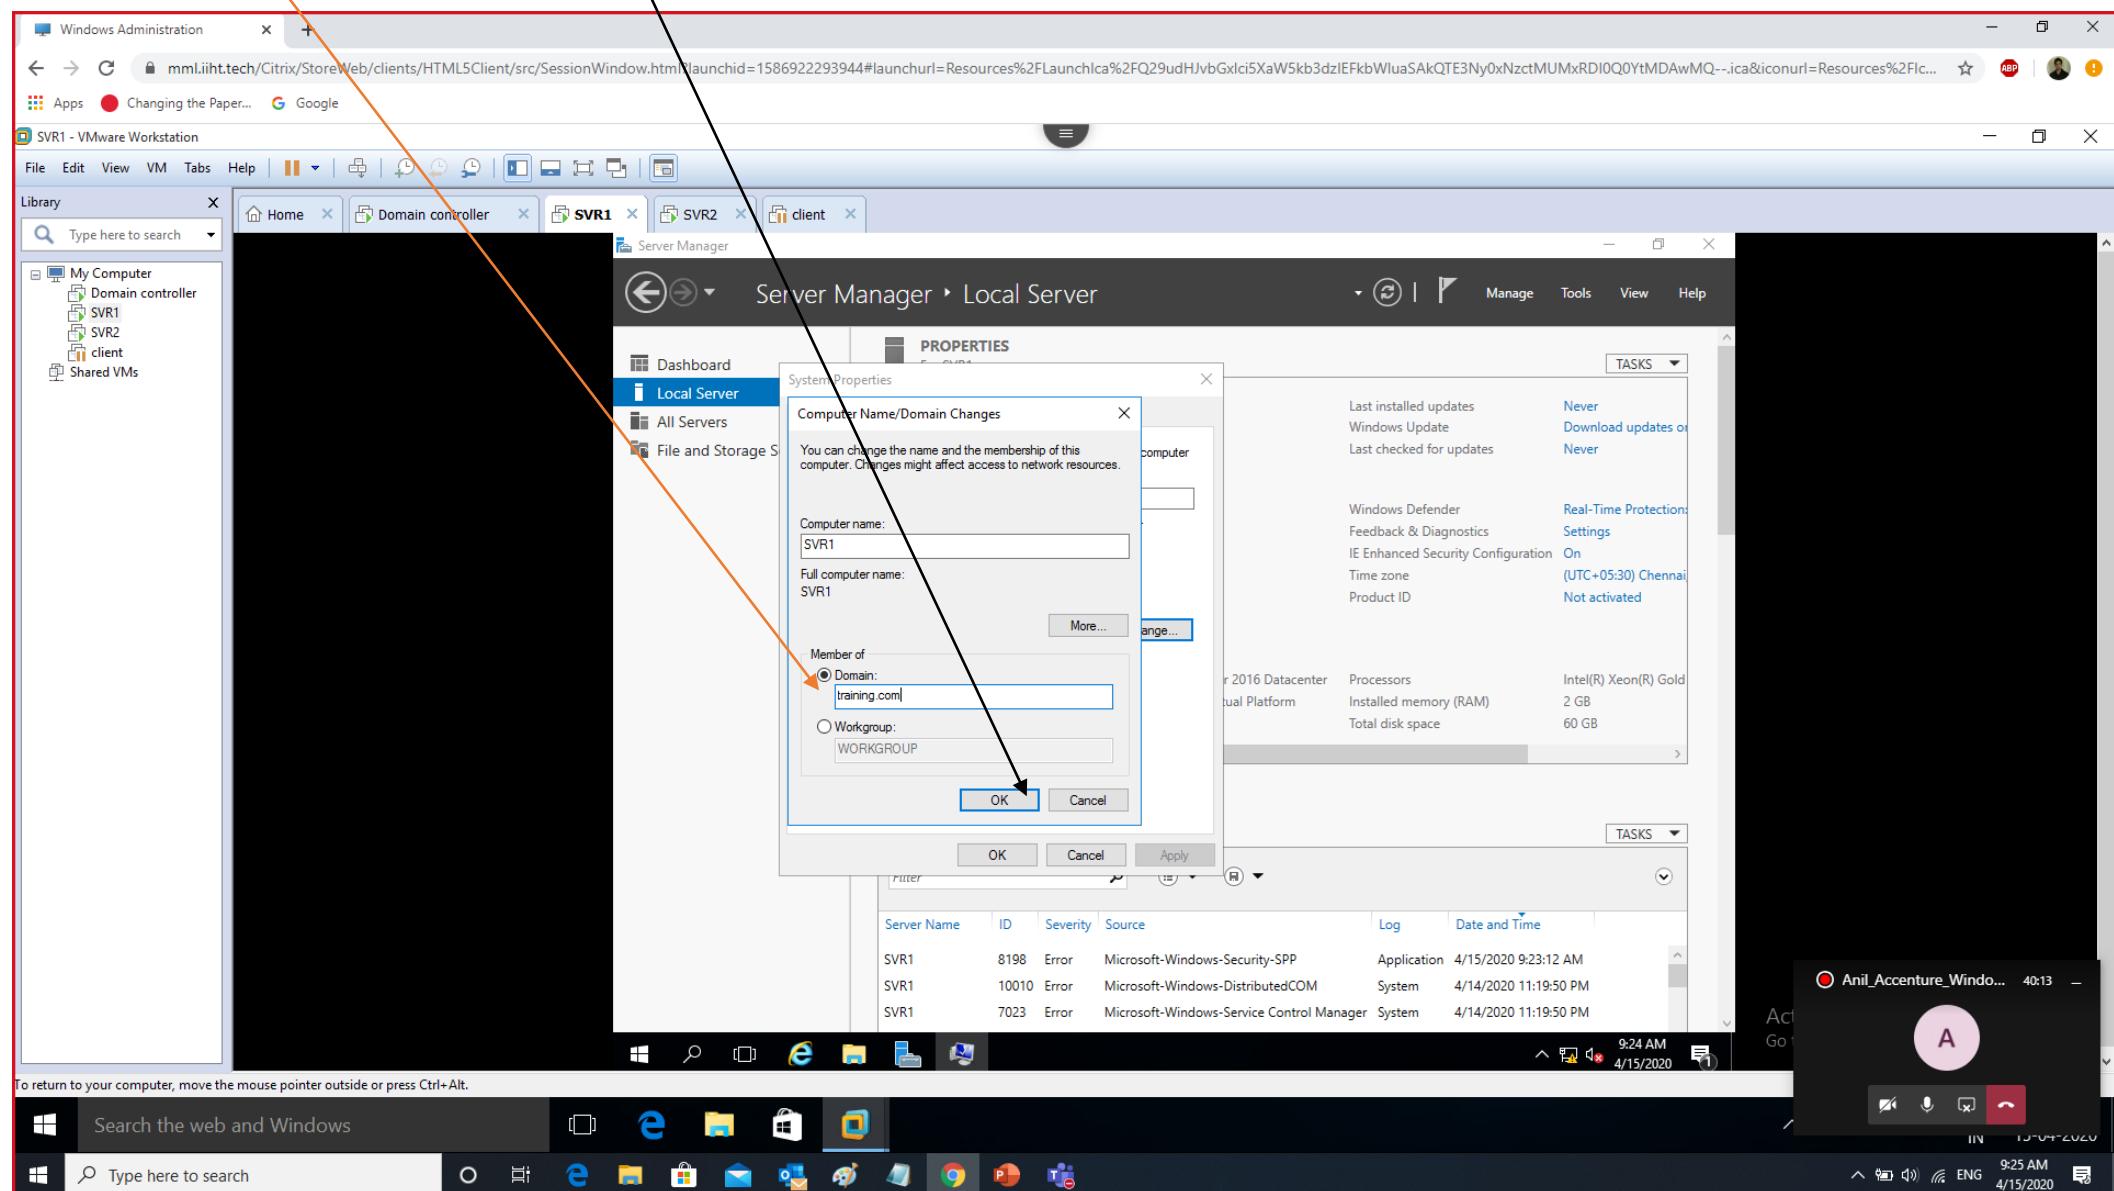

Click on work group

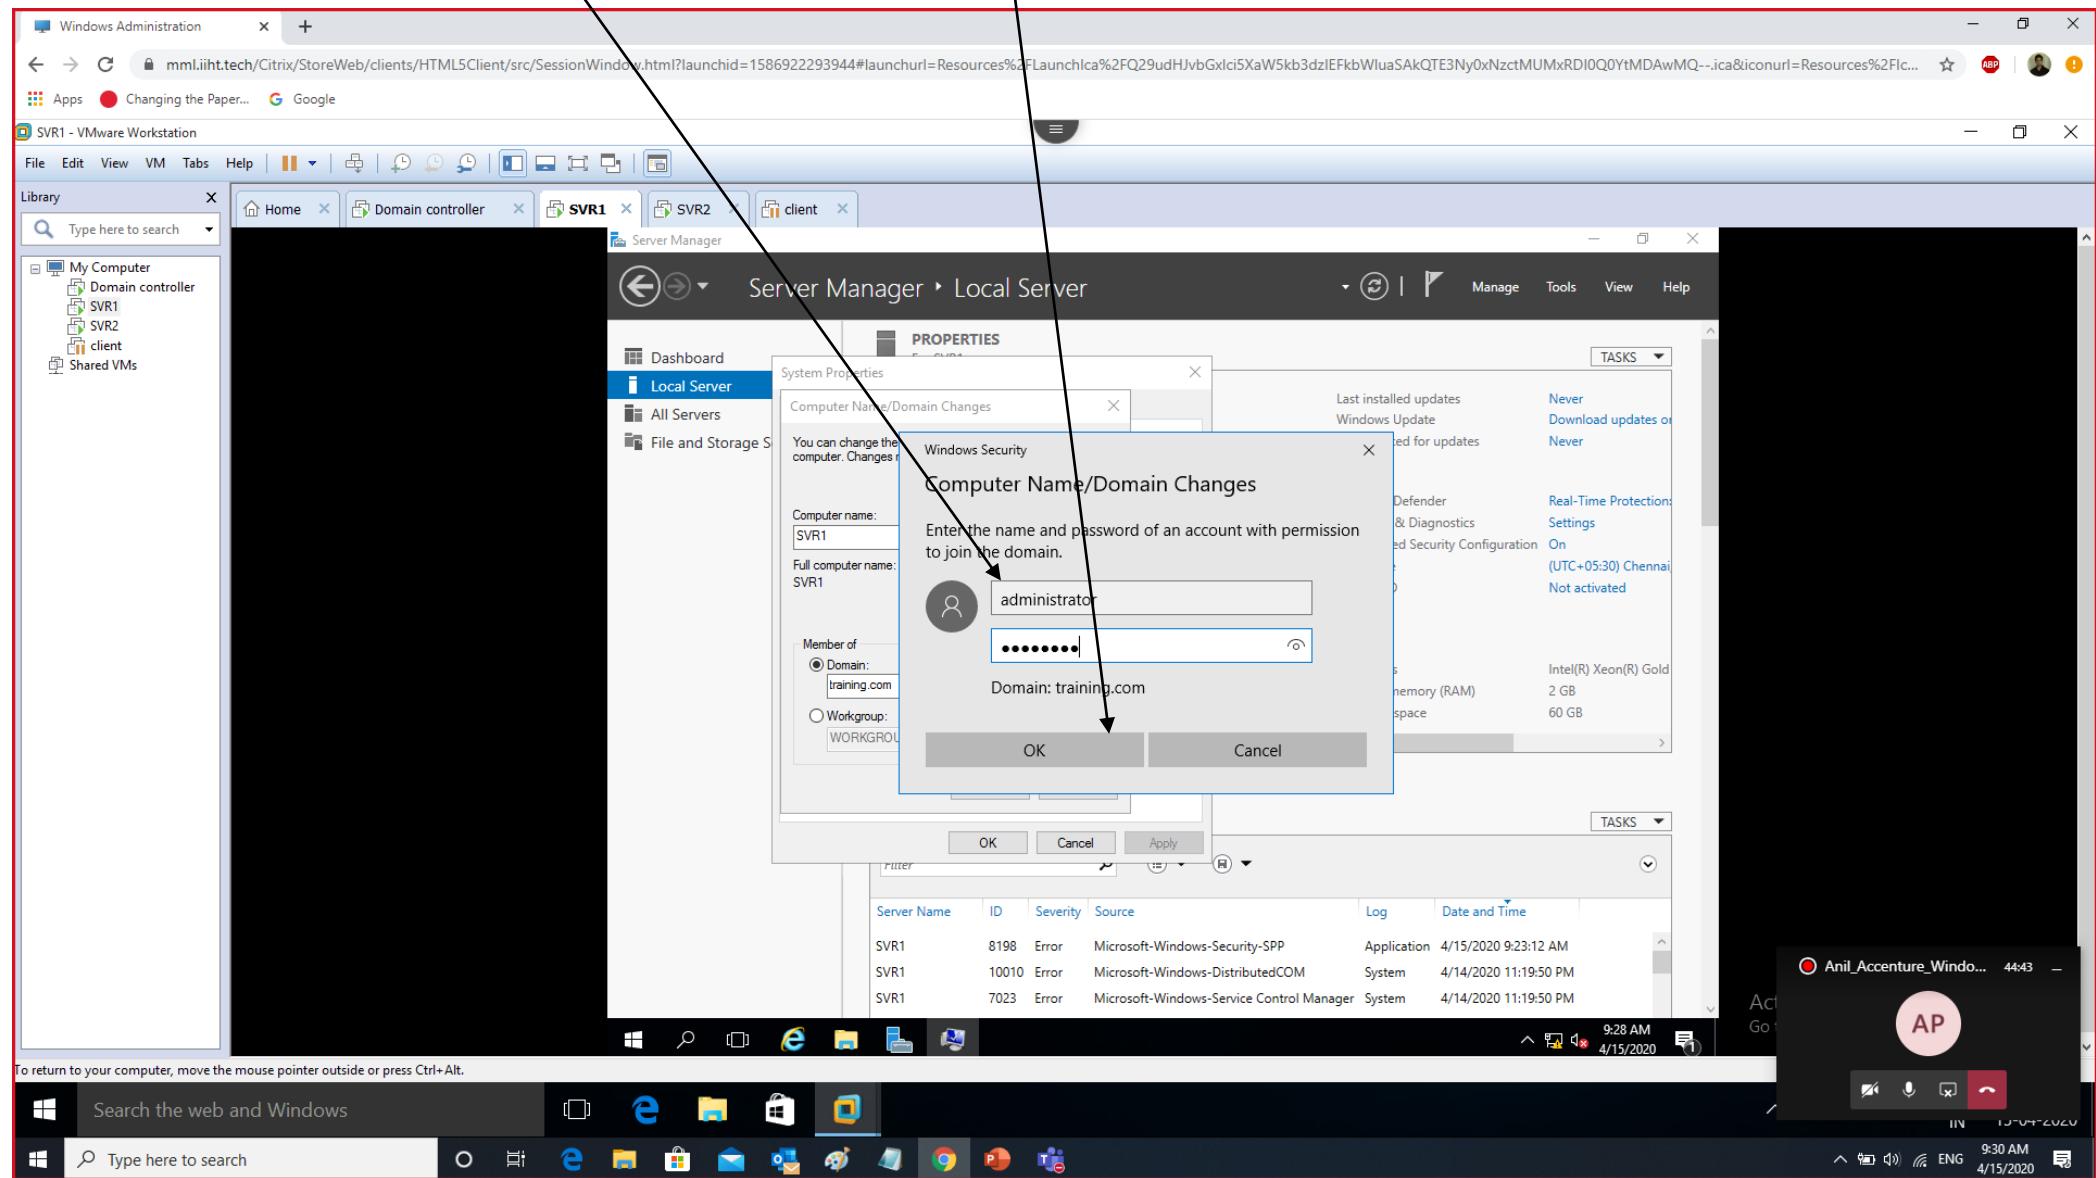

Click change

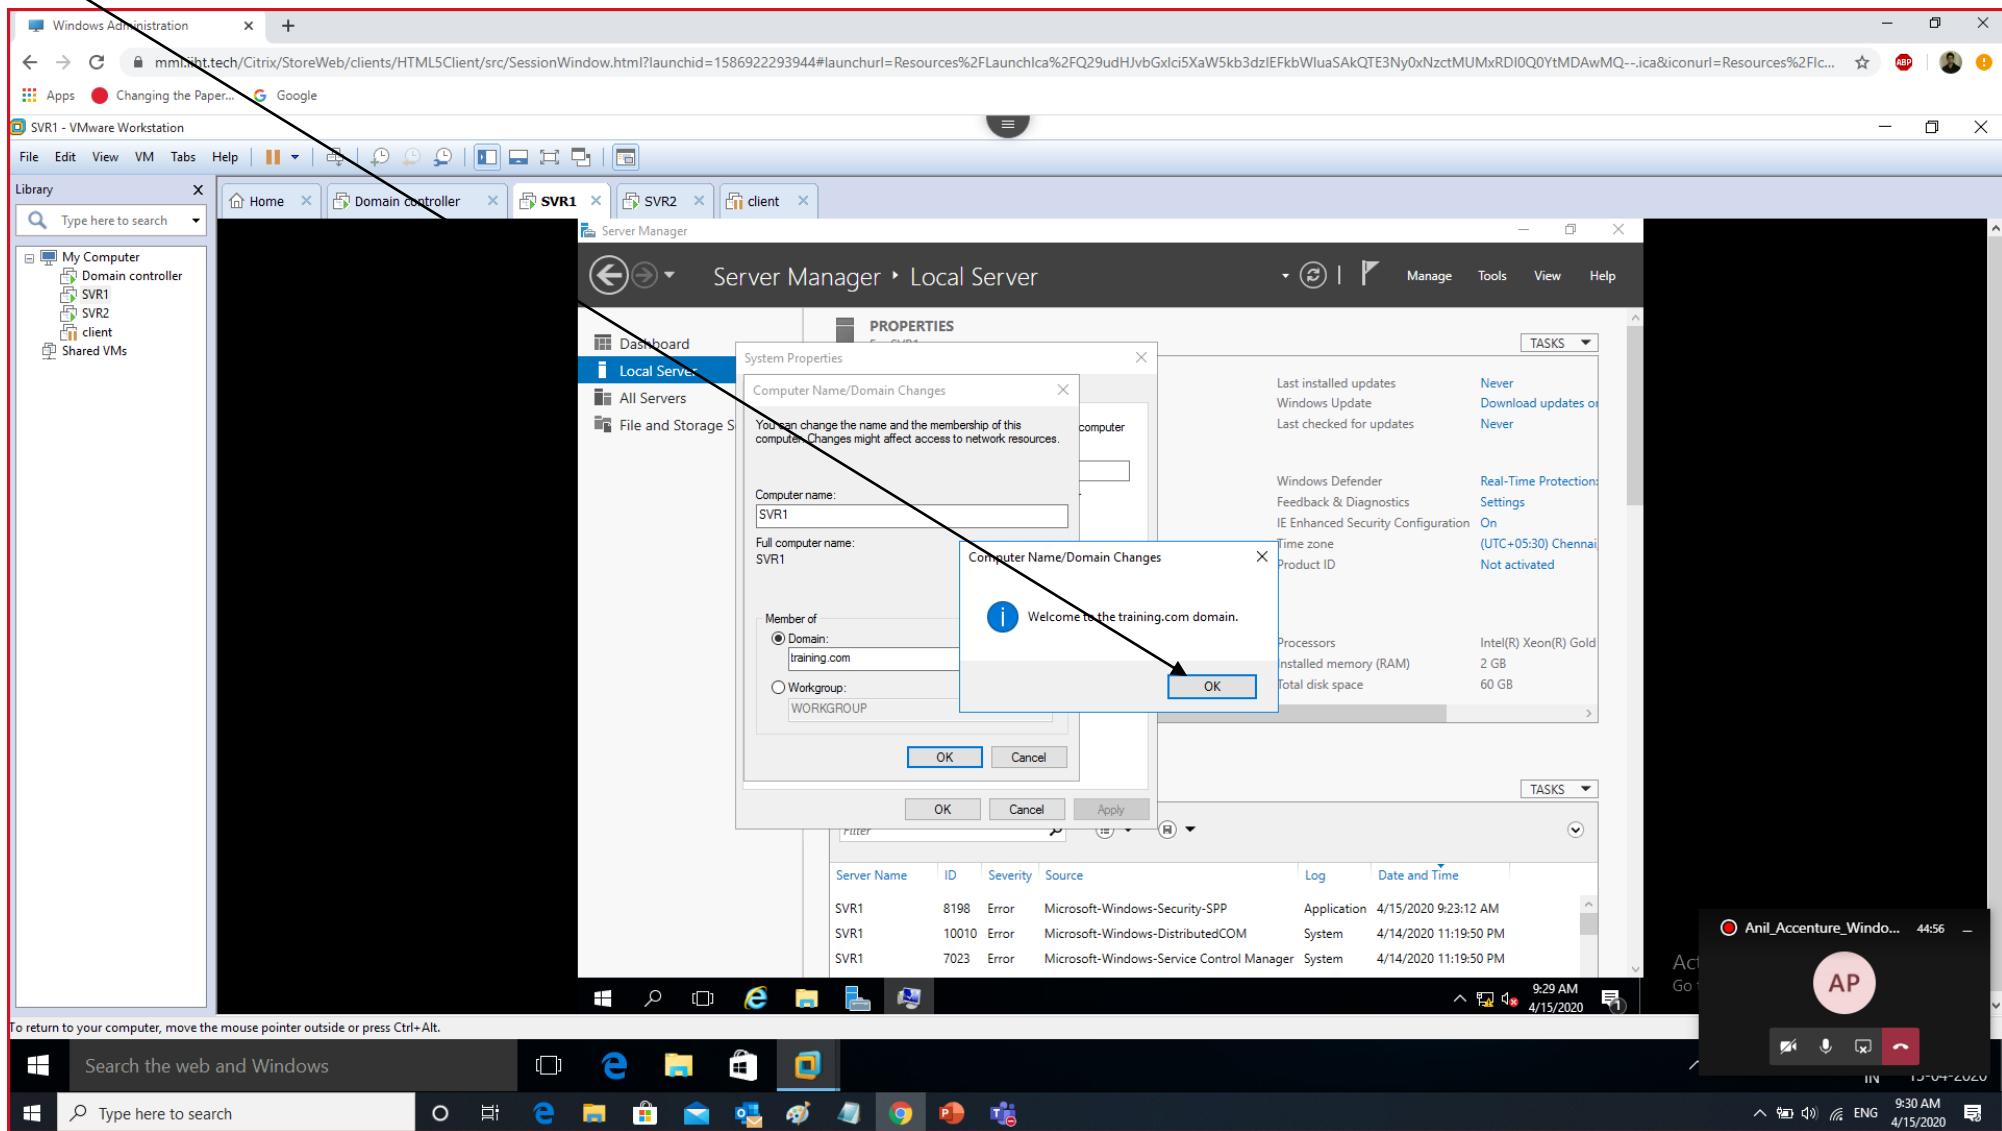

Enter the domain name and click on ok

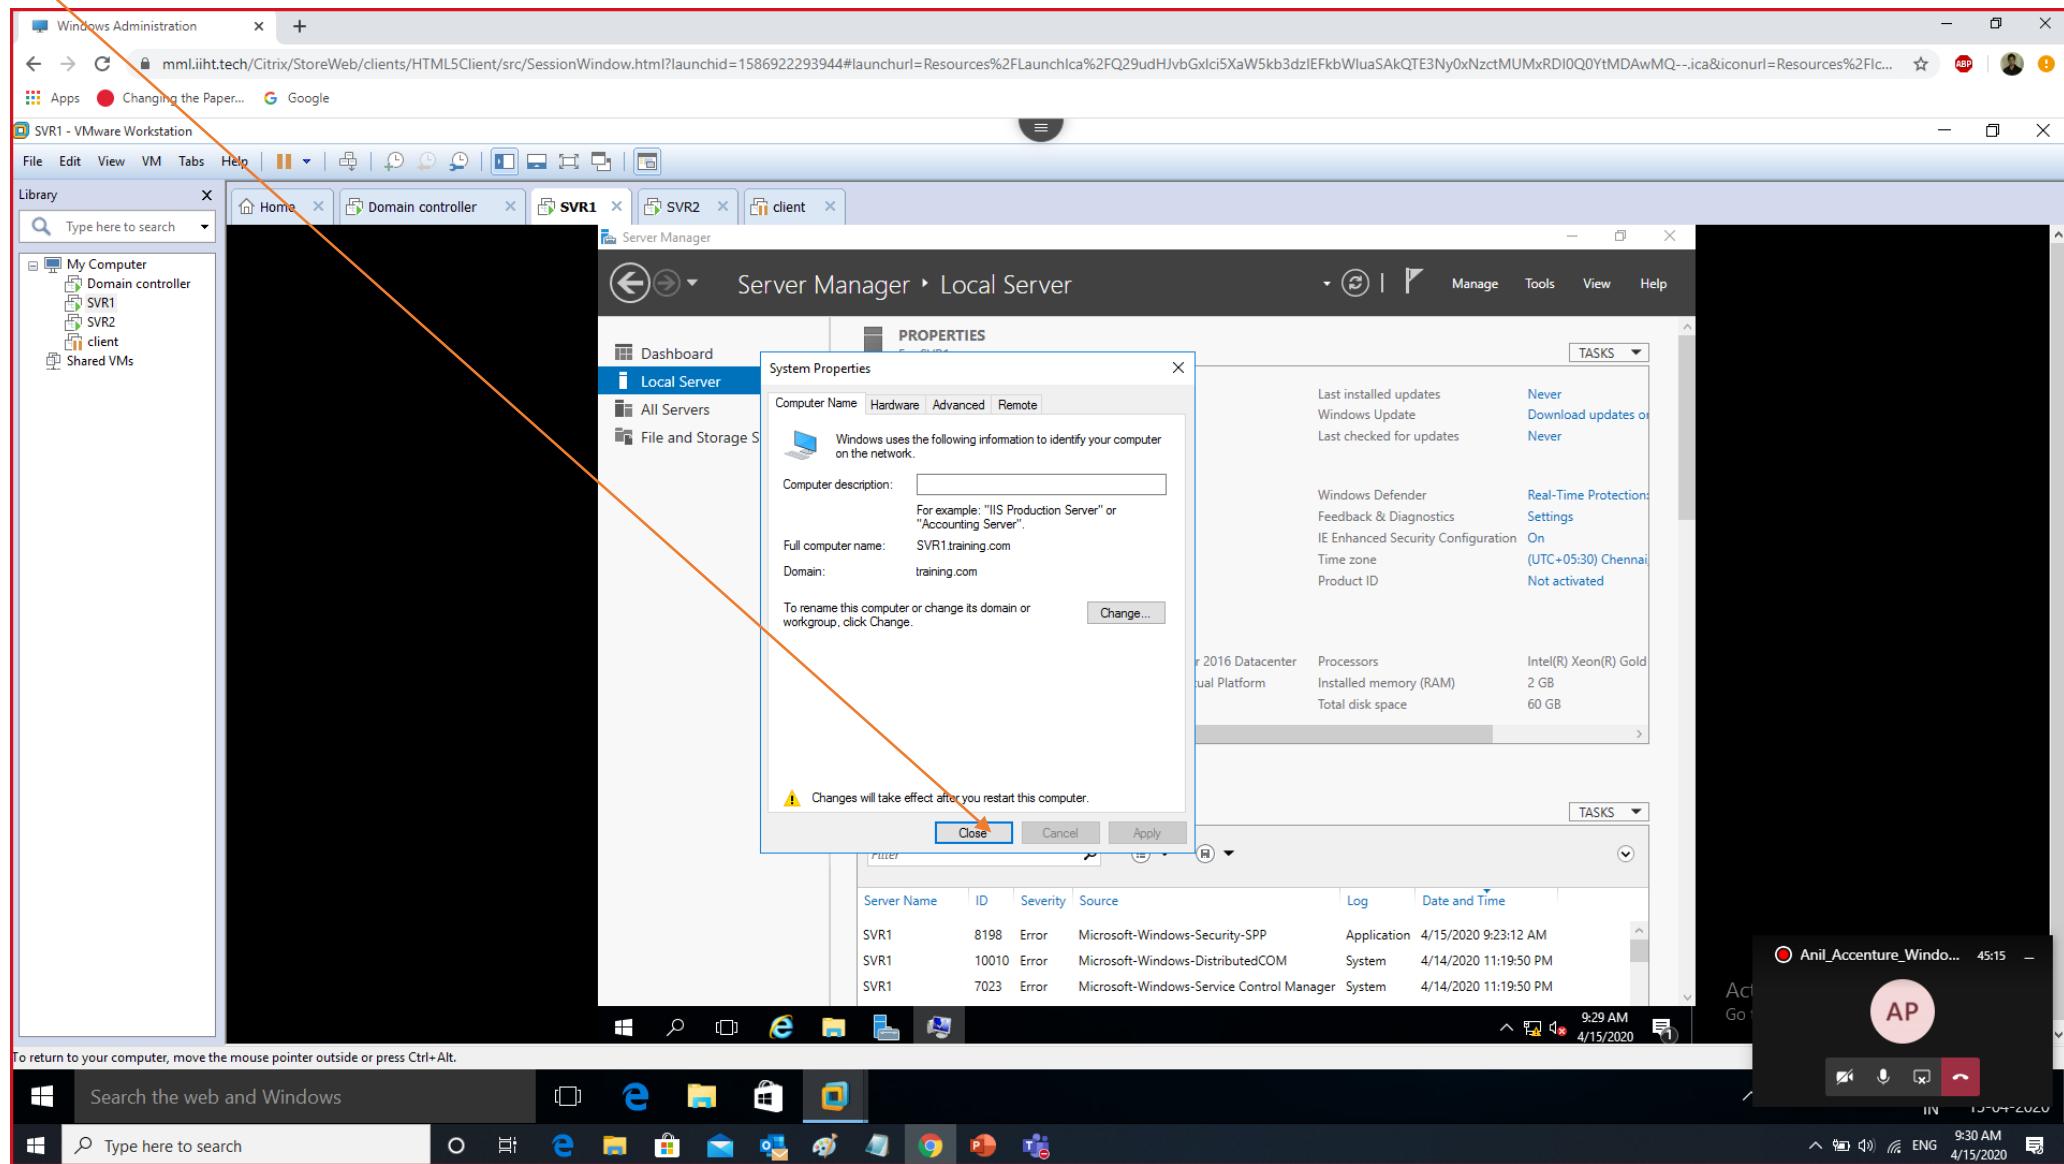

Enter the domain administrator credentials and click on ok

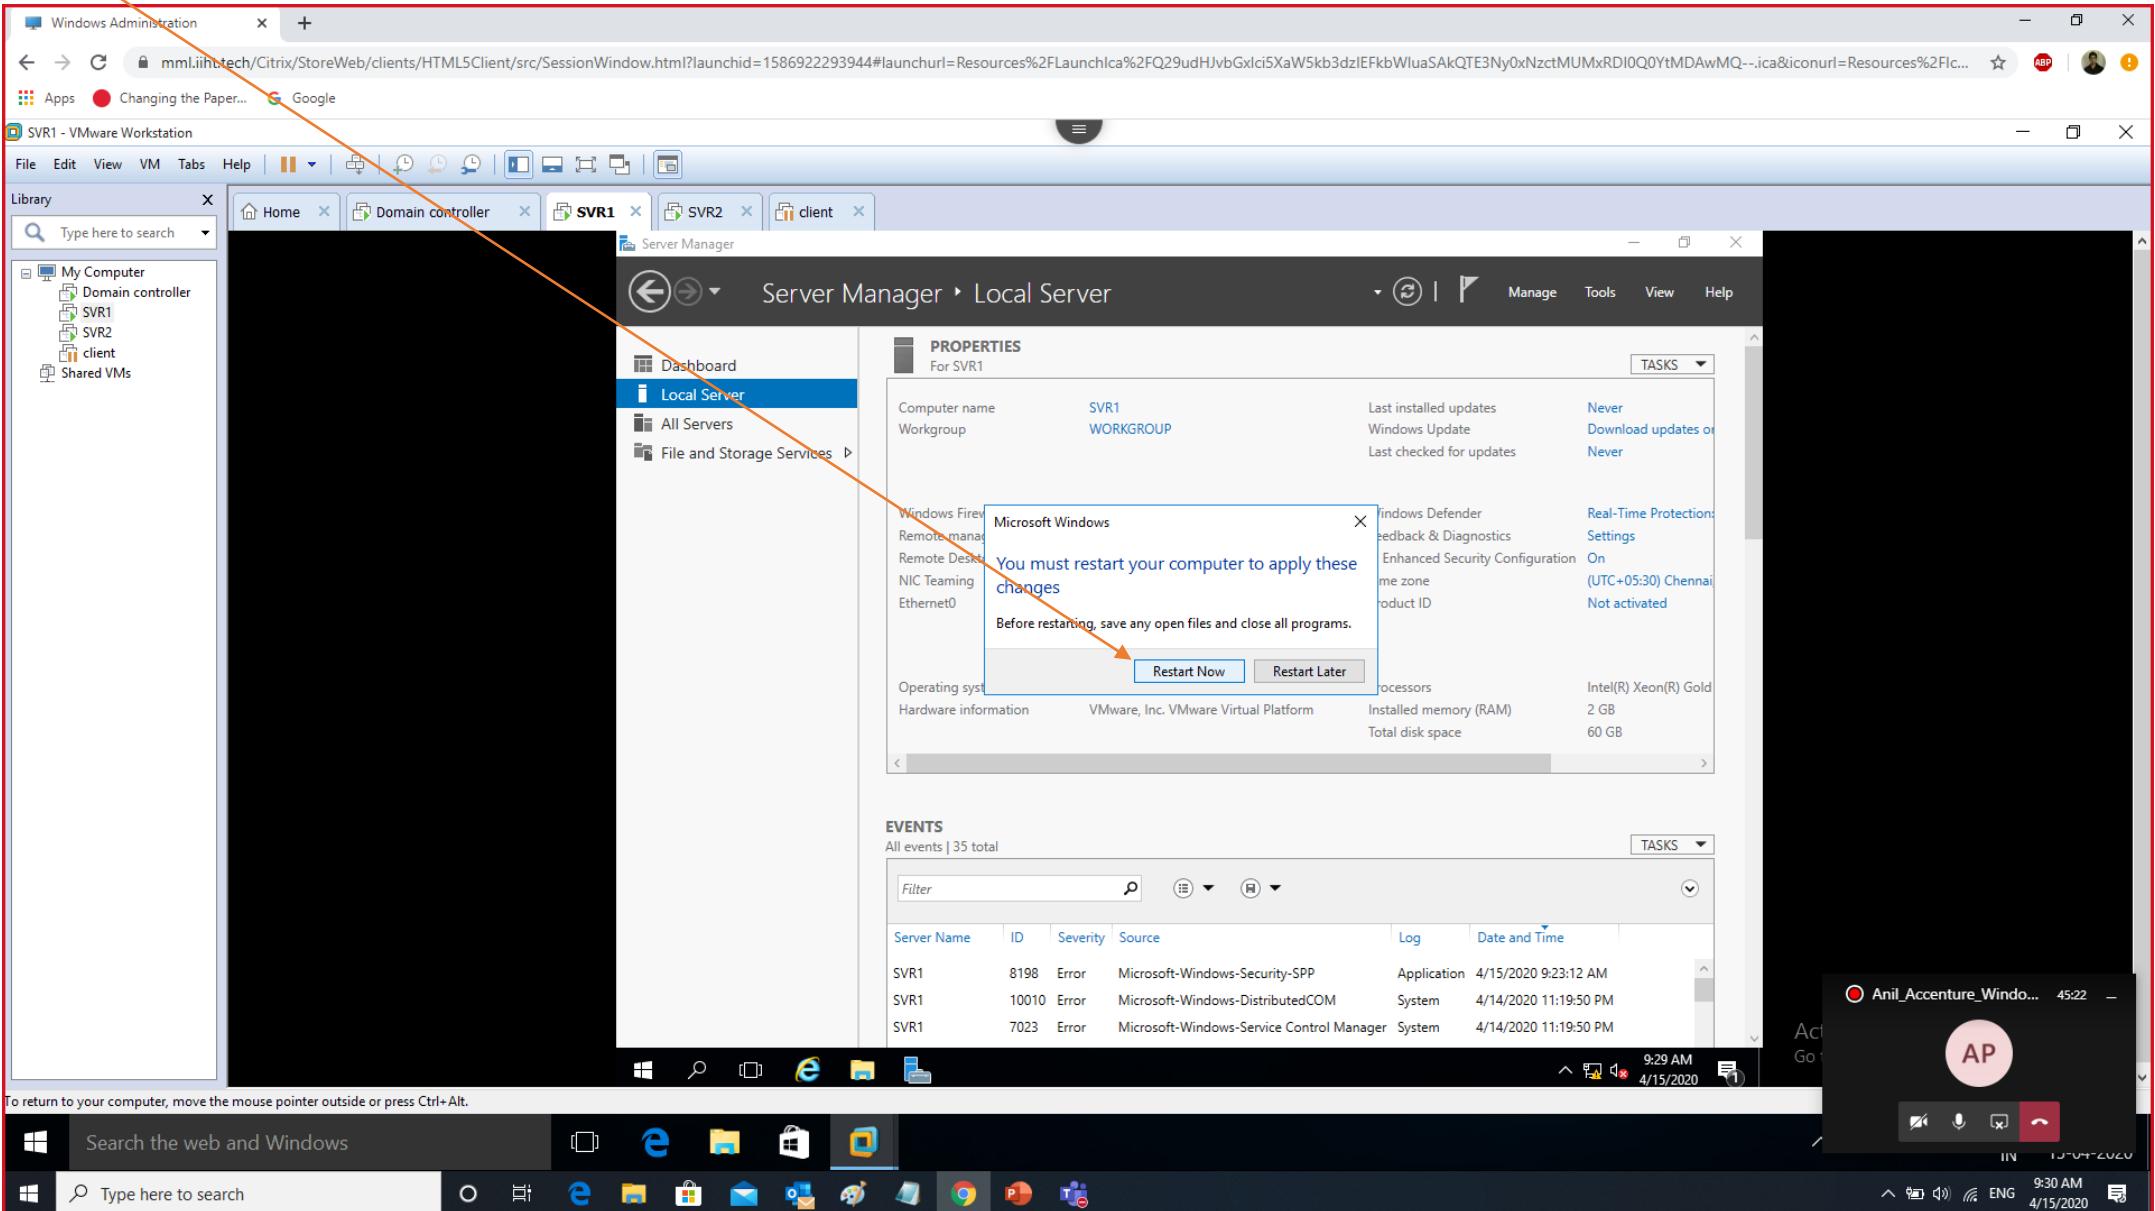

Click ok

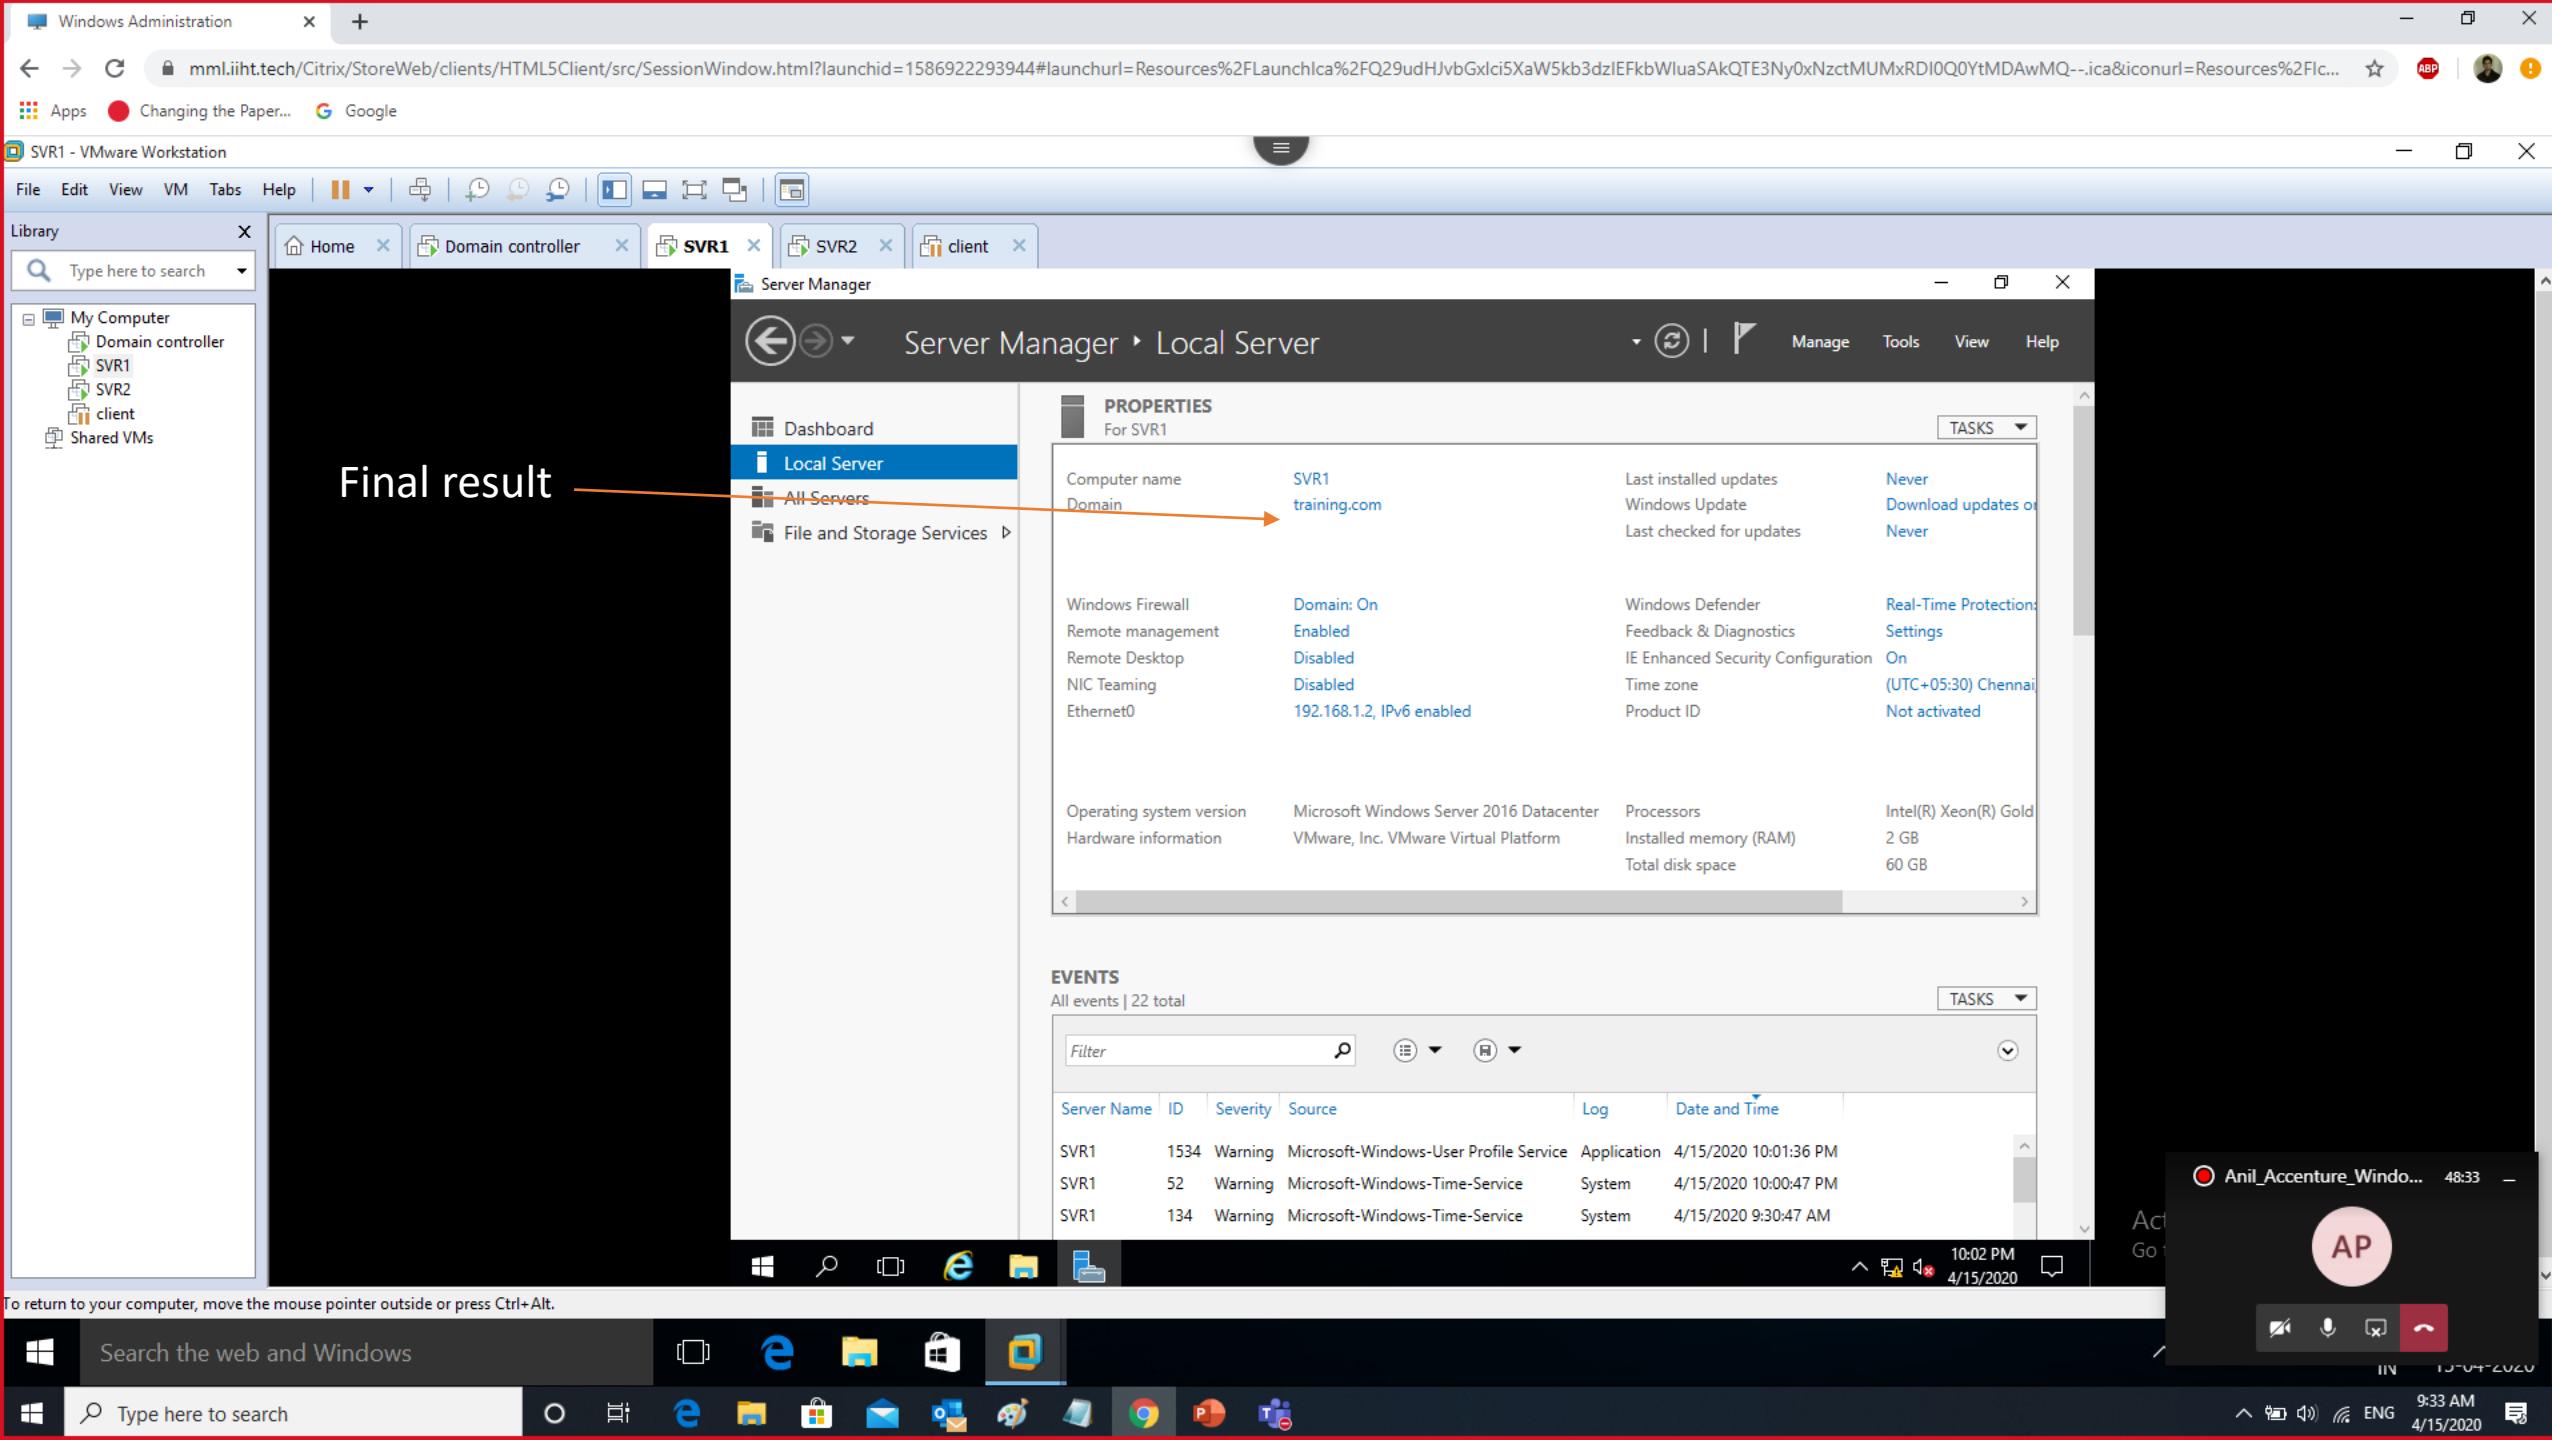

Click close

Click Restart Now

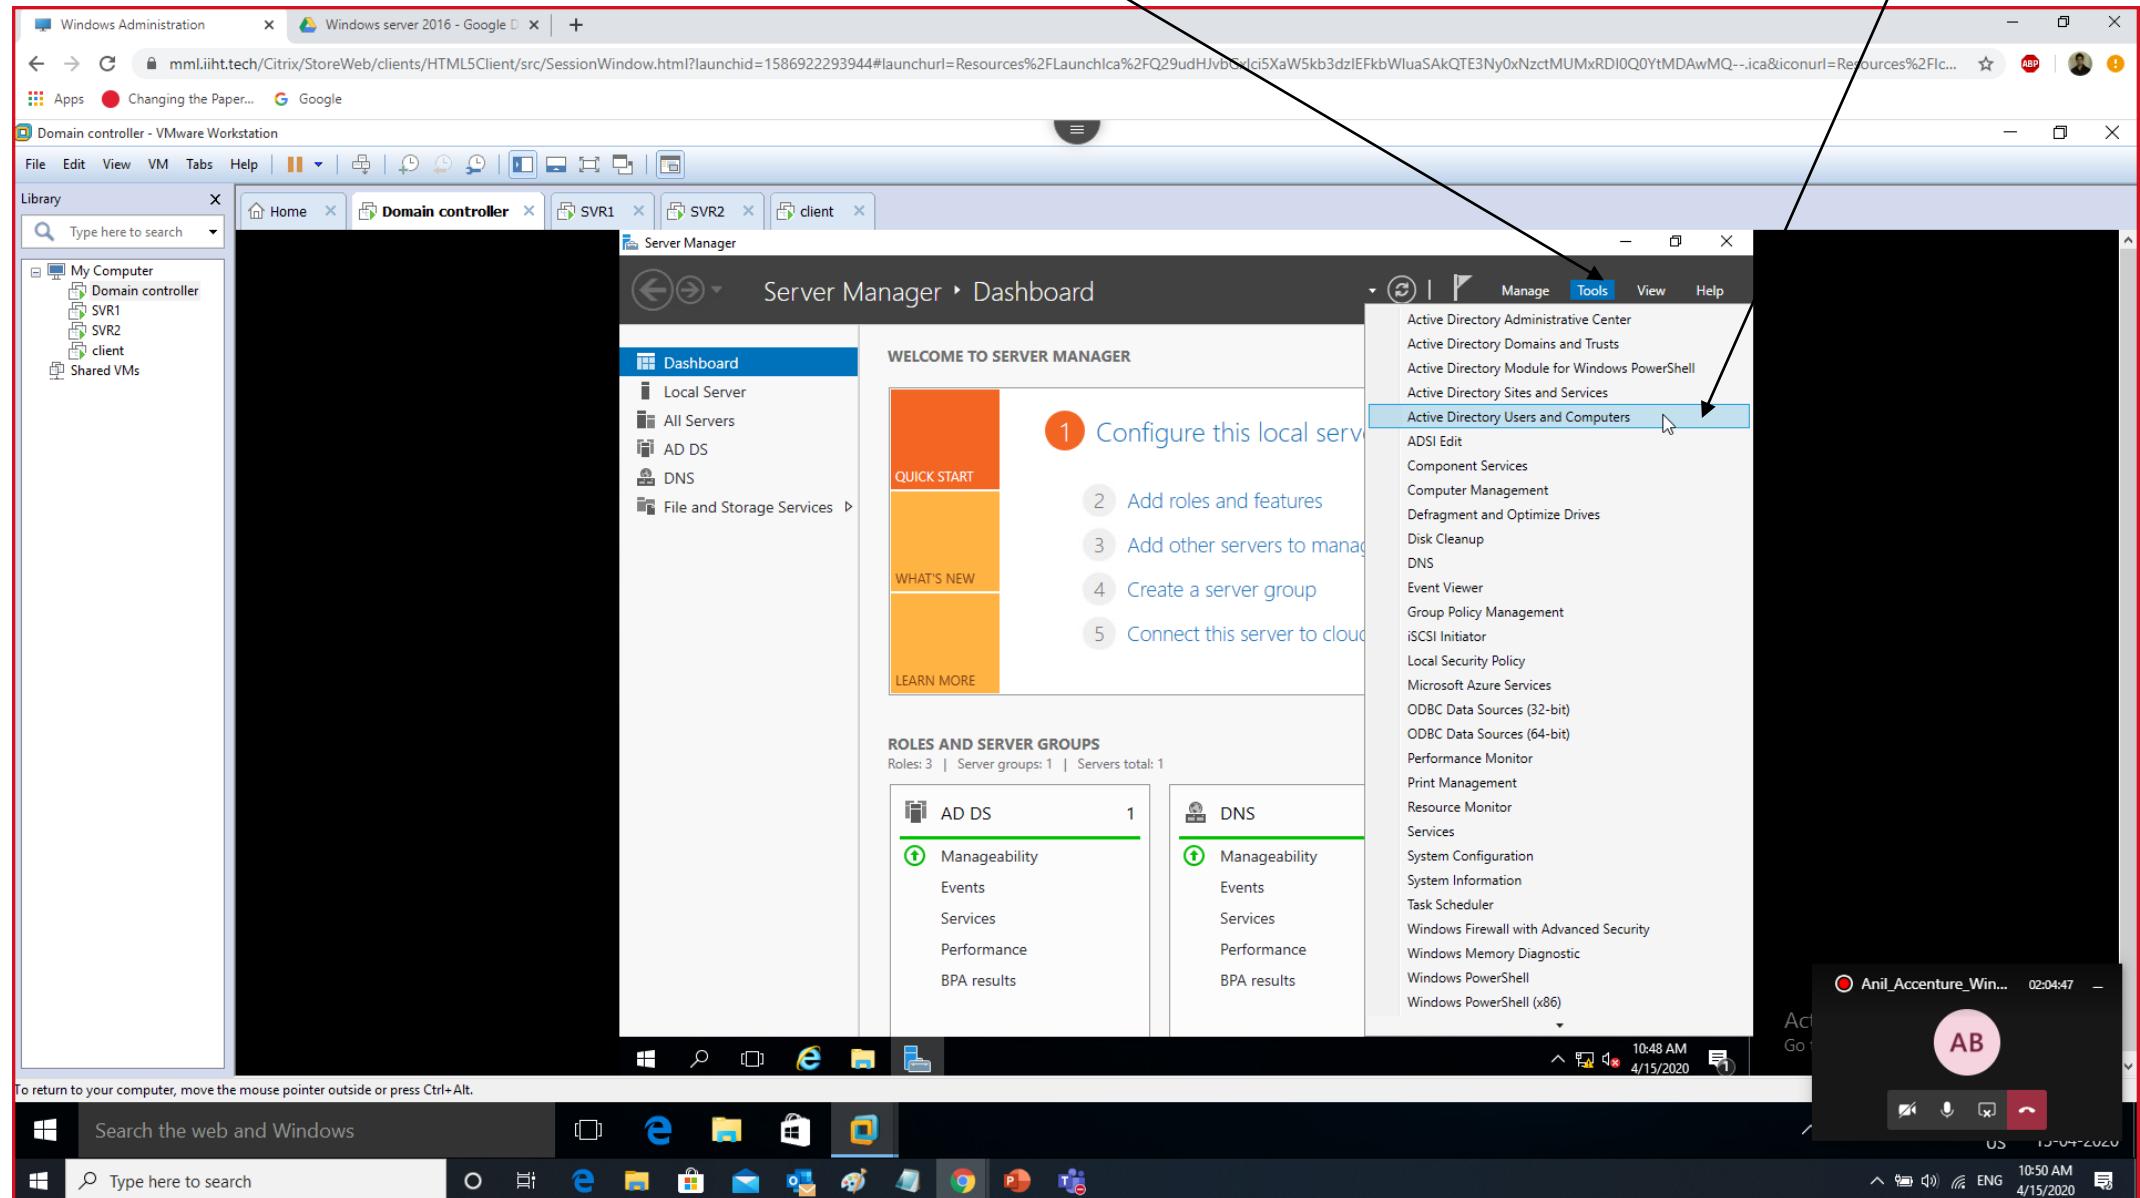

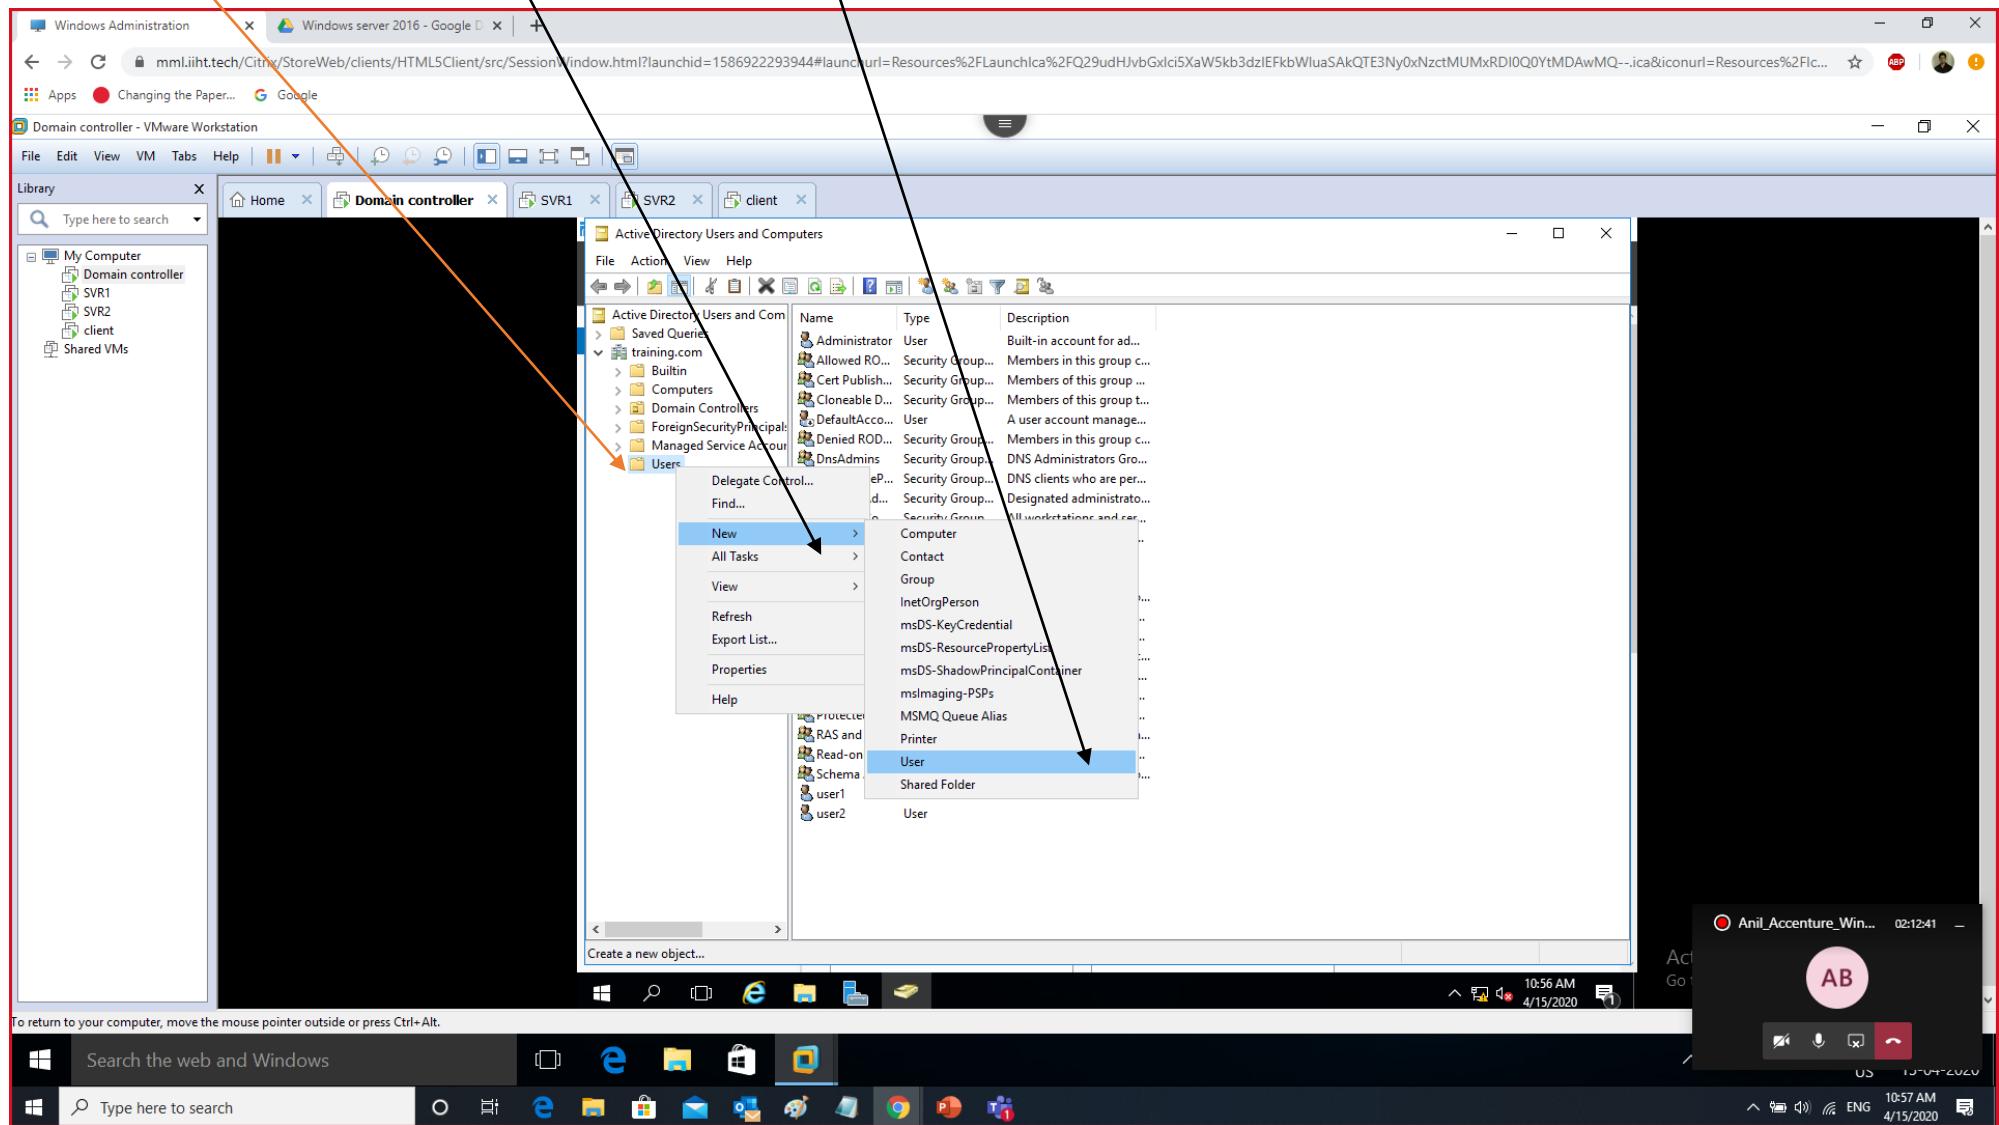

TASK 6

User Management

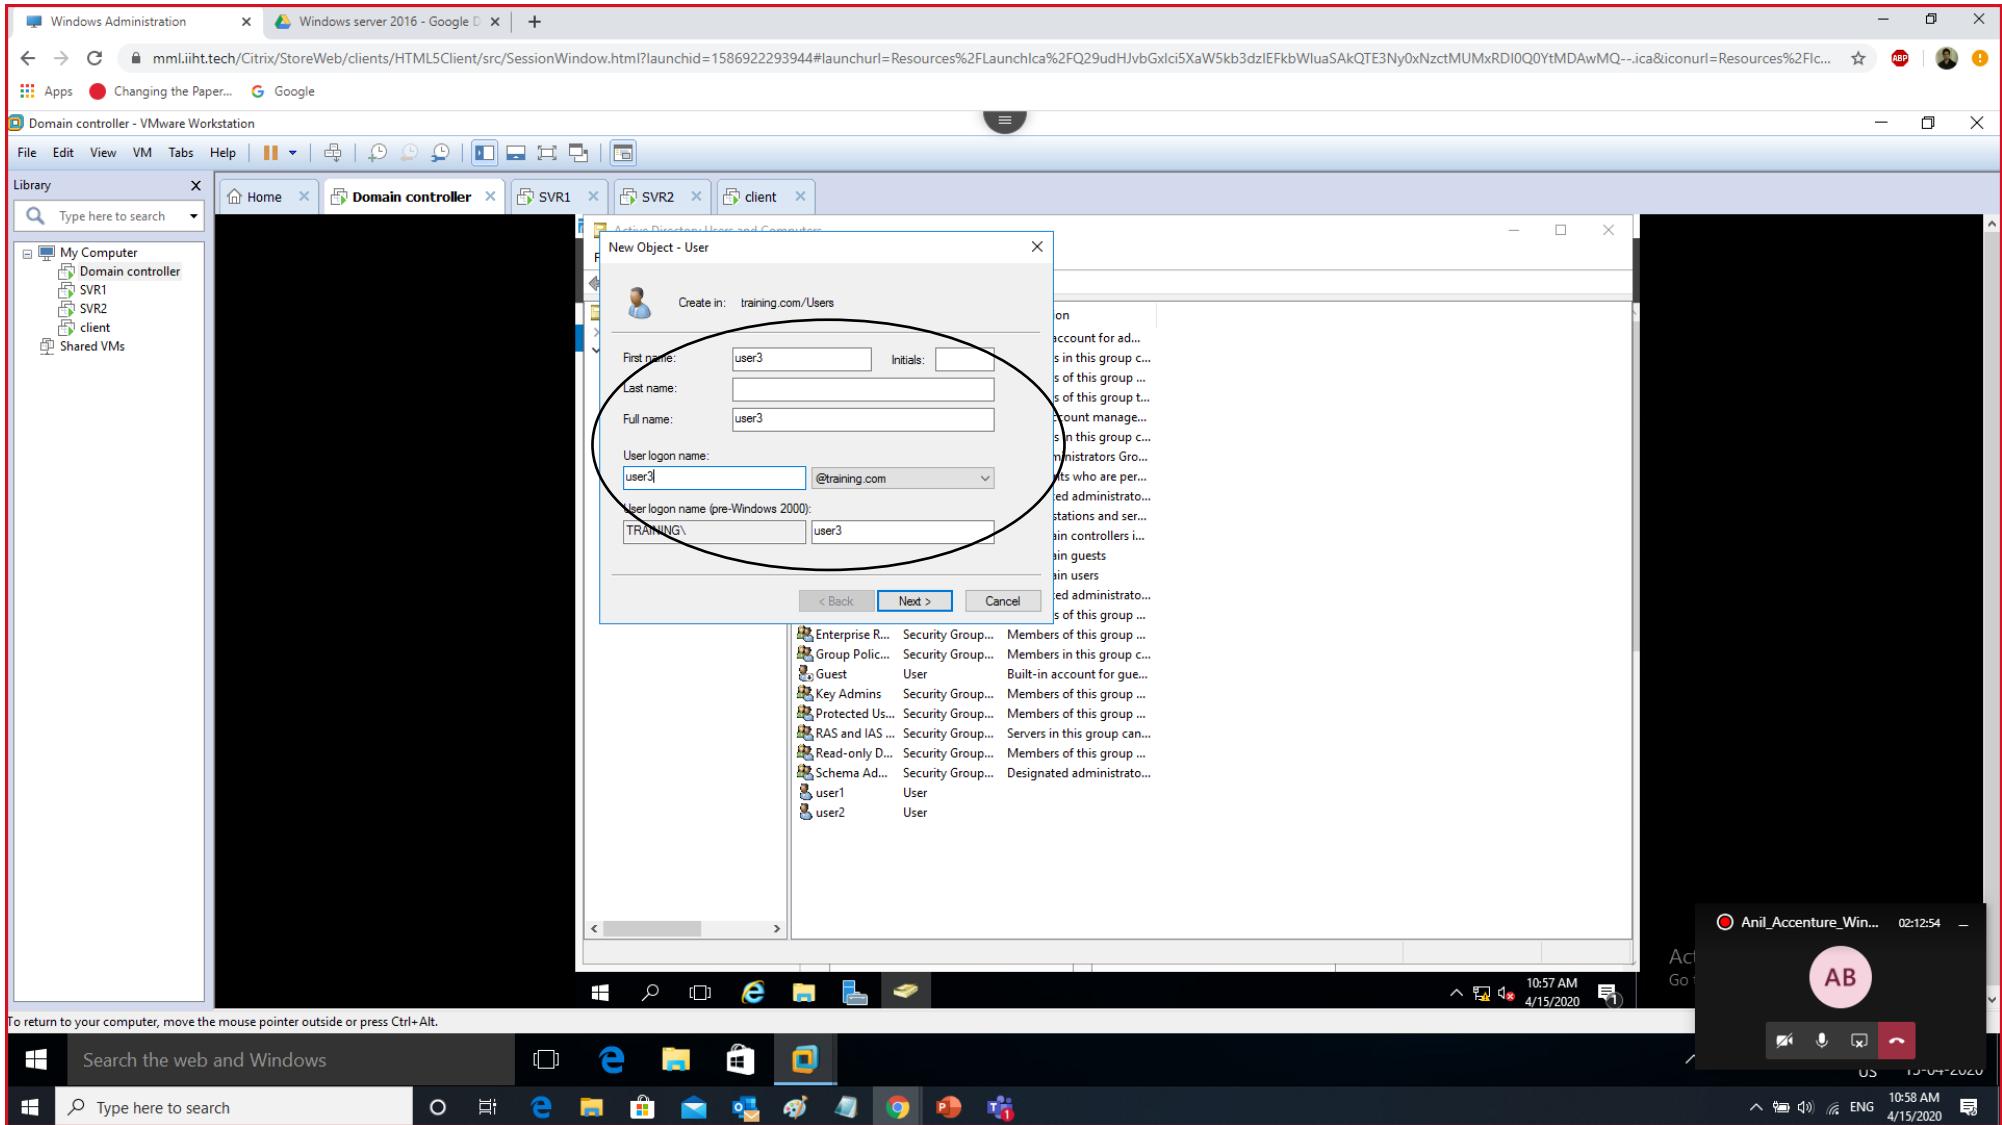

In the domain controller , go to server manager and click on tools and the click on Active directory users and computers

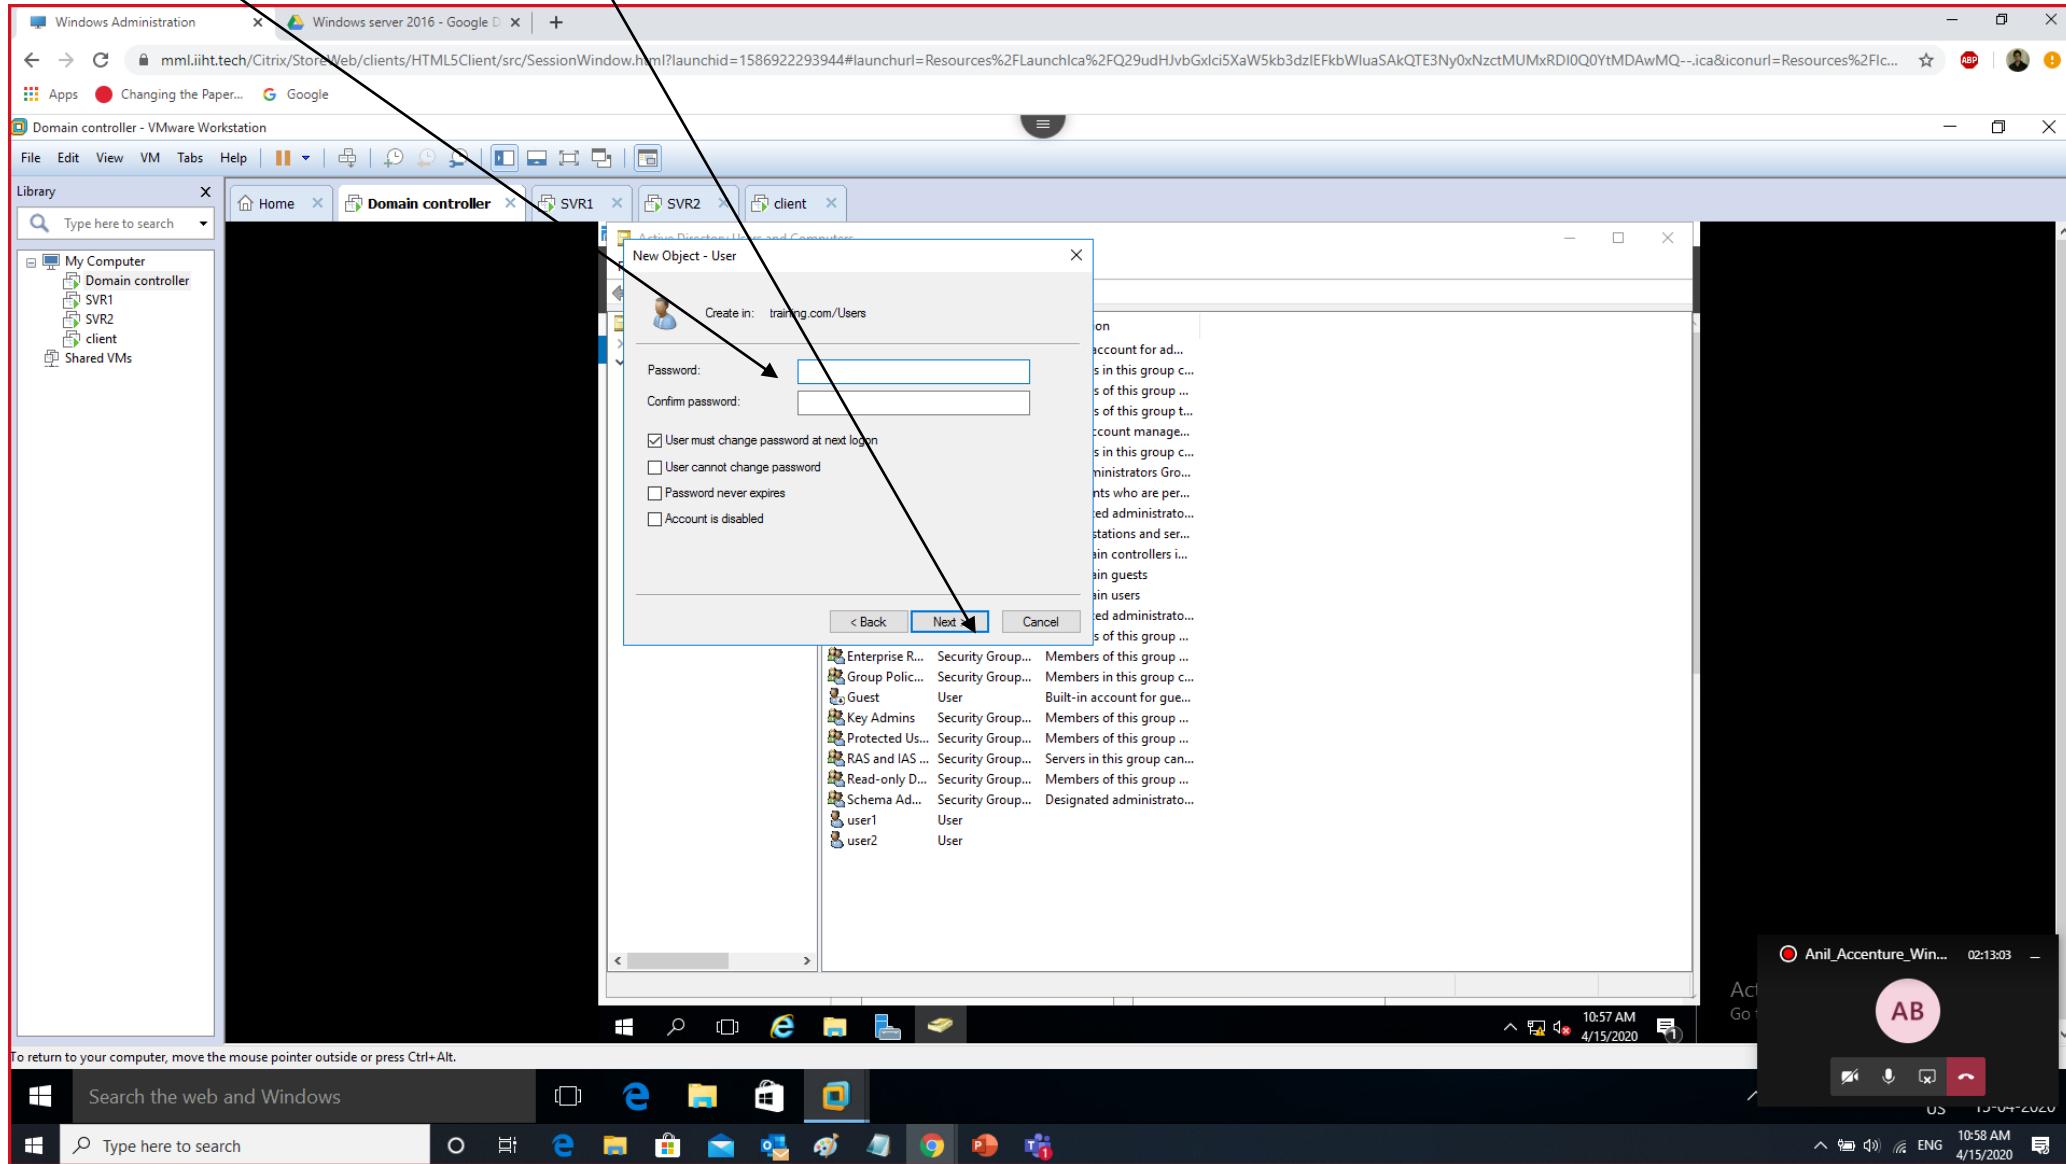

Right click on Users OU and click New followed by user

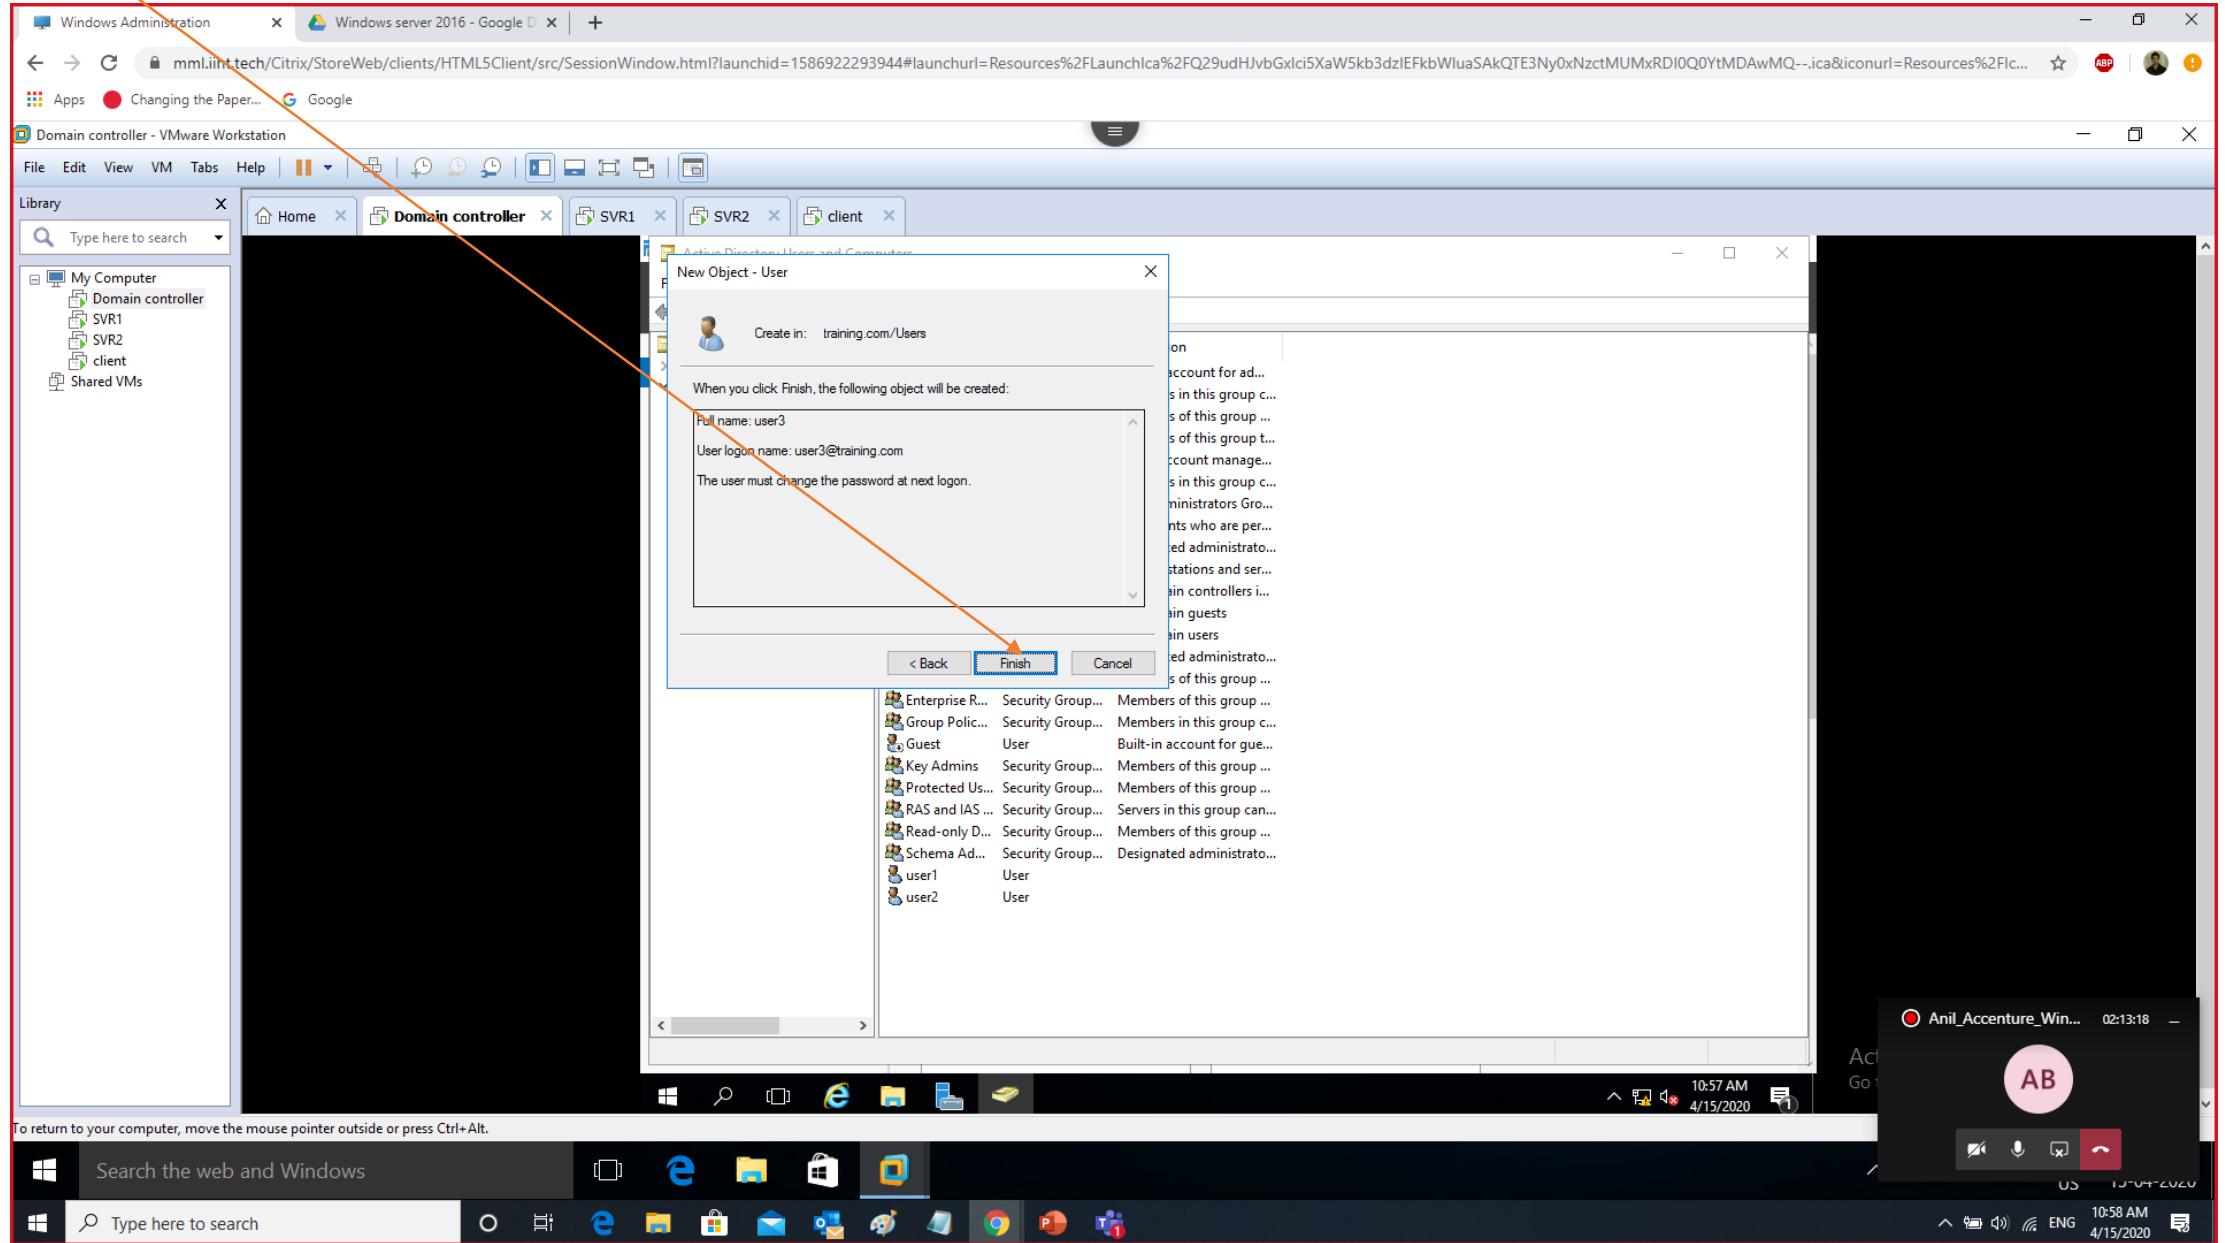

Provide the required details for the user and click on next

Provide user password and click on next

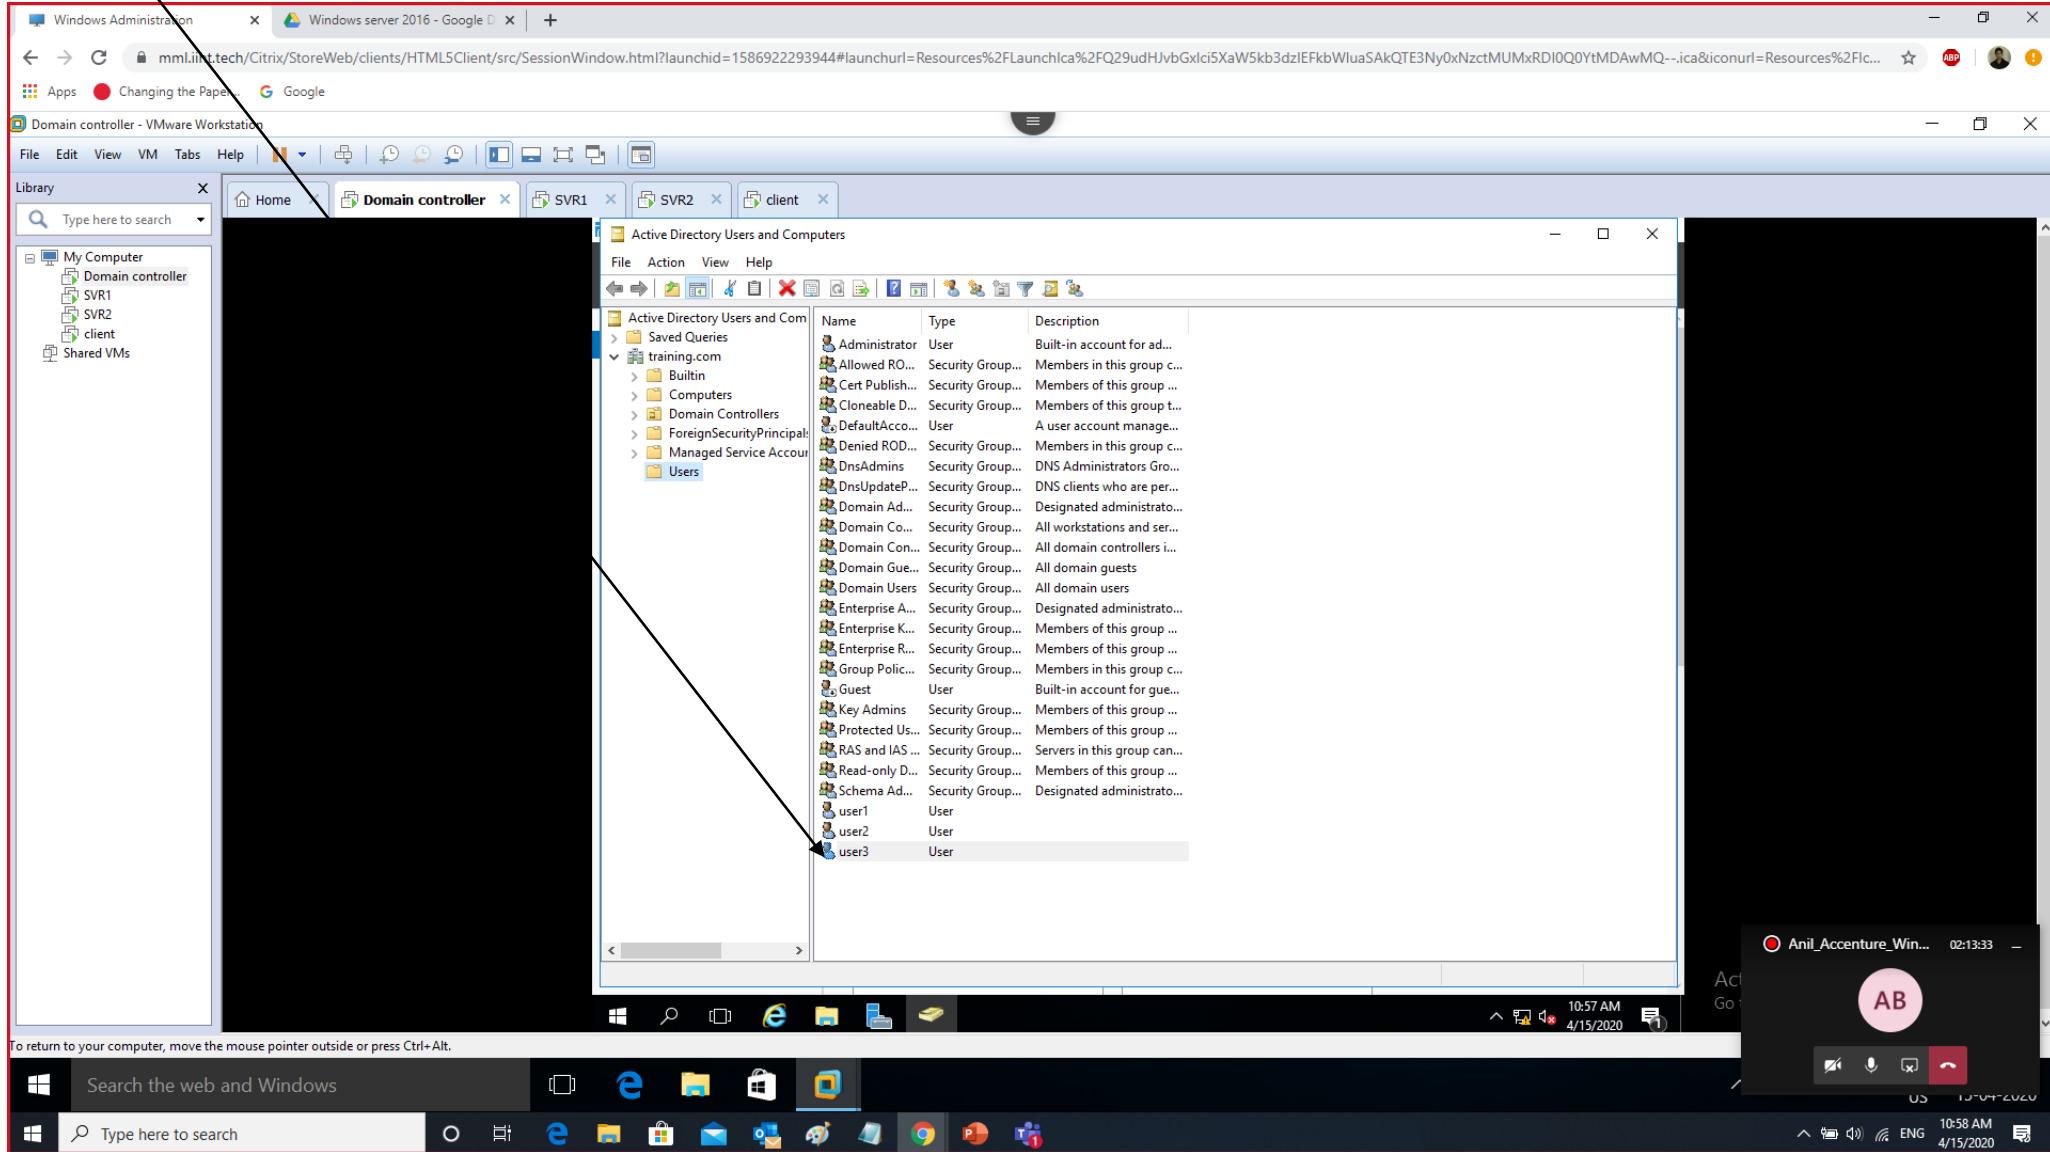

Click Finish

To return to your computer, move the mouse pointer outside or press Ctrl+Alt.

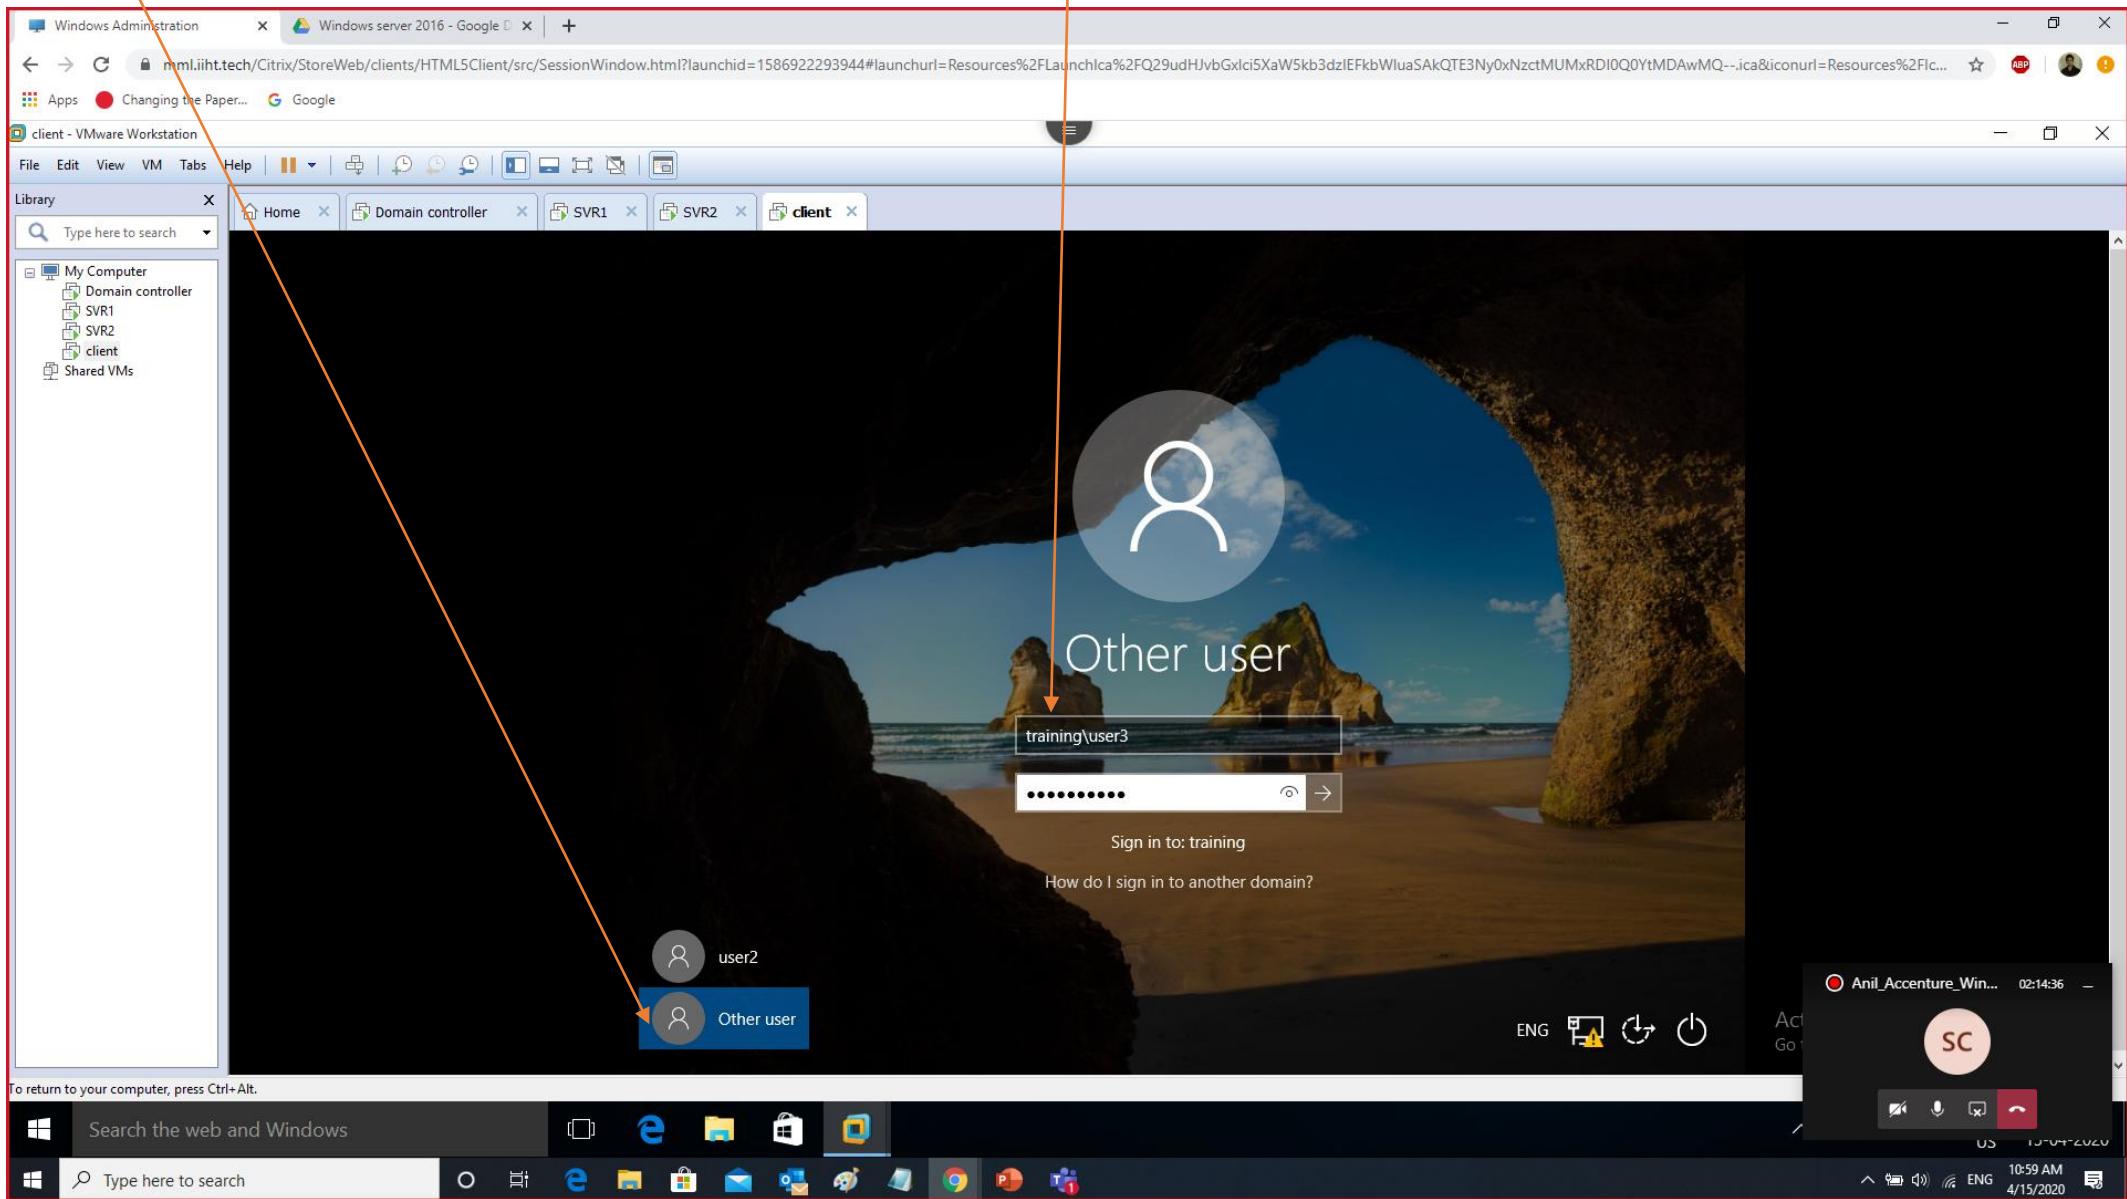

End result of the task

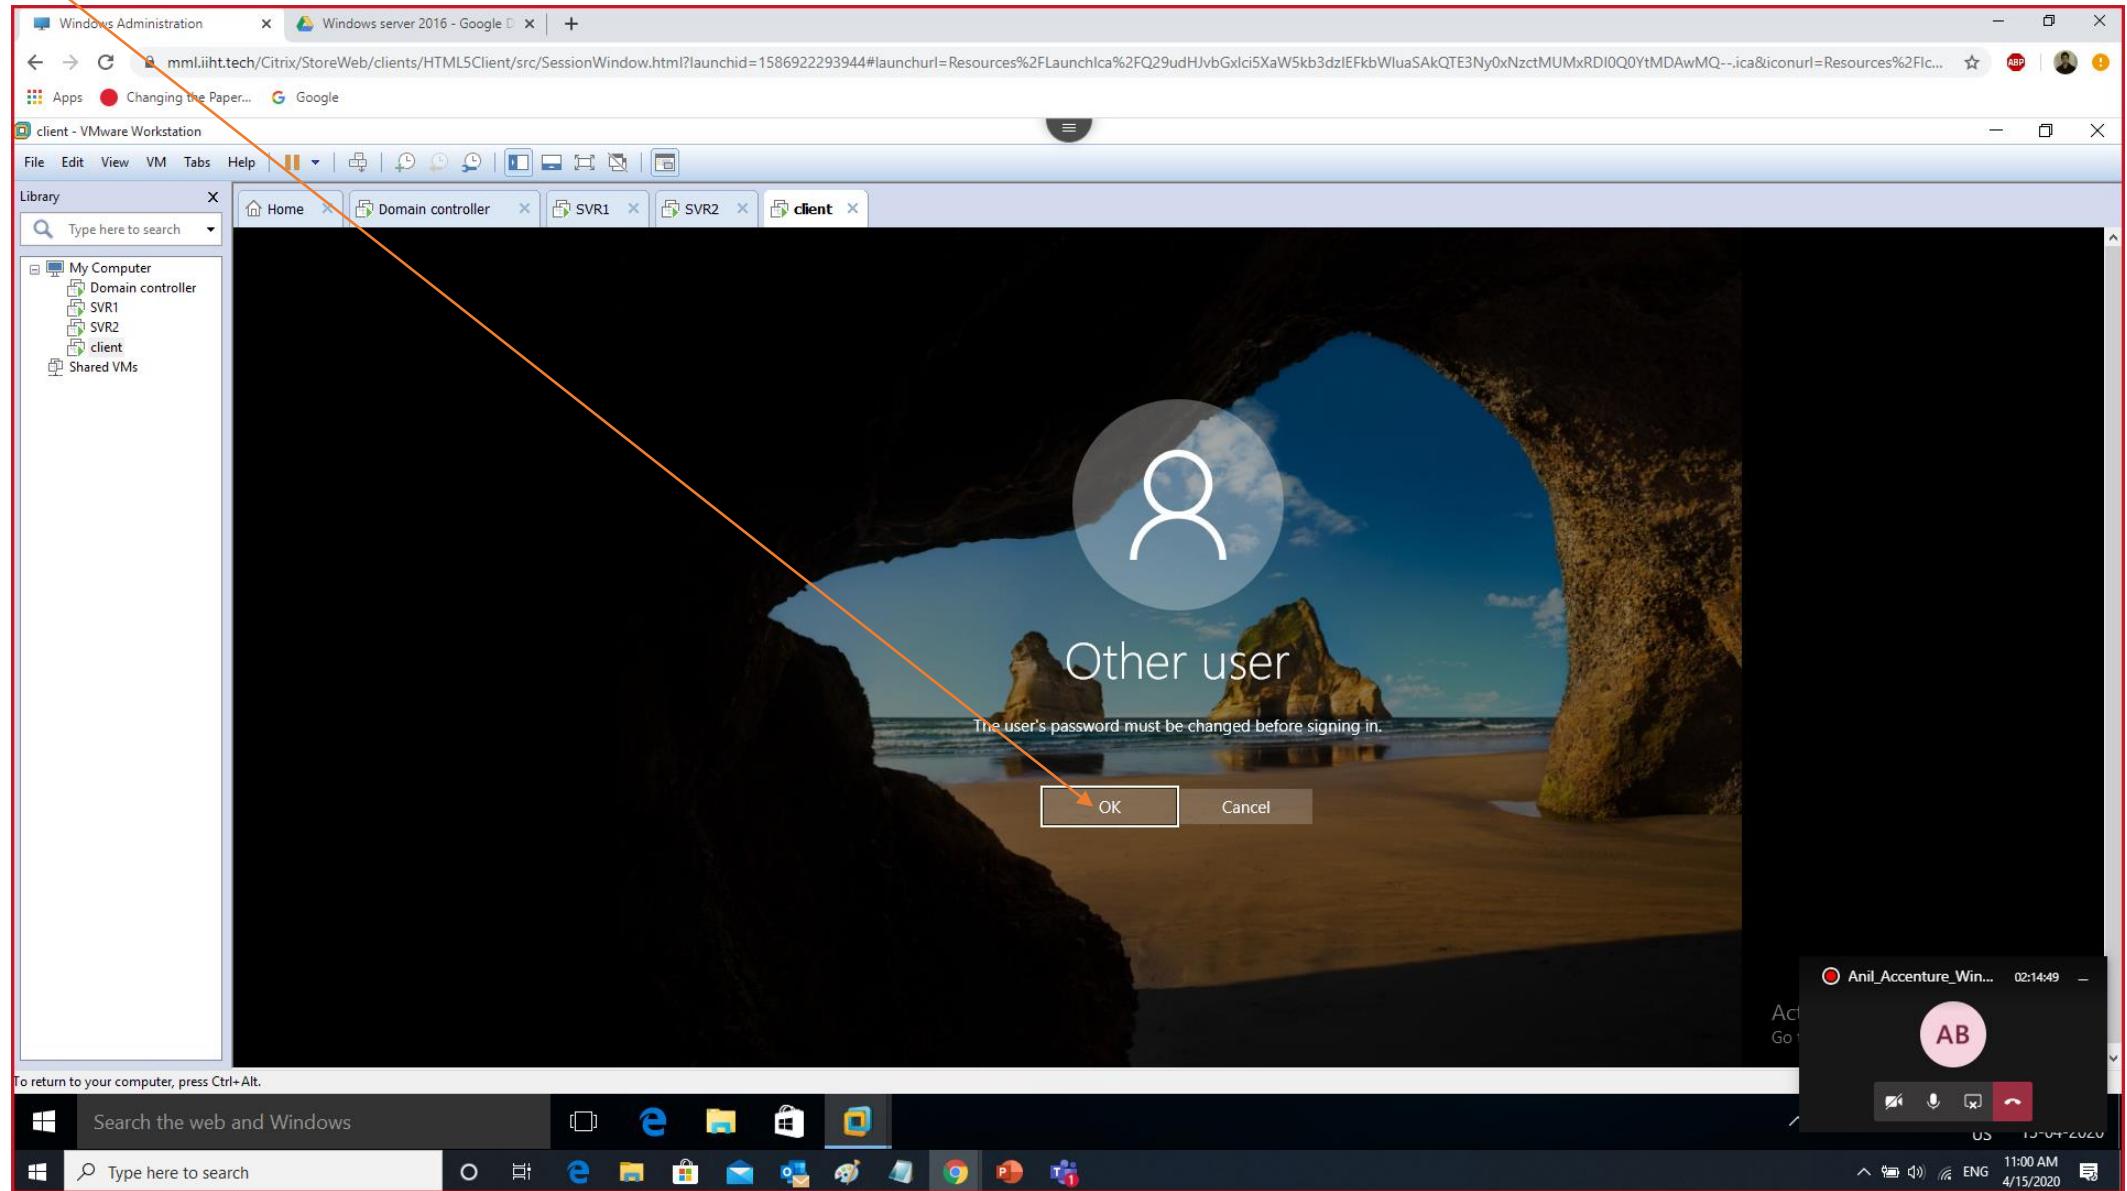

Testing user login

GO TO CLIENT MACHINE TO TEST THE USER LOGIN

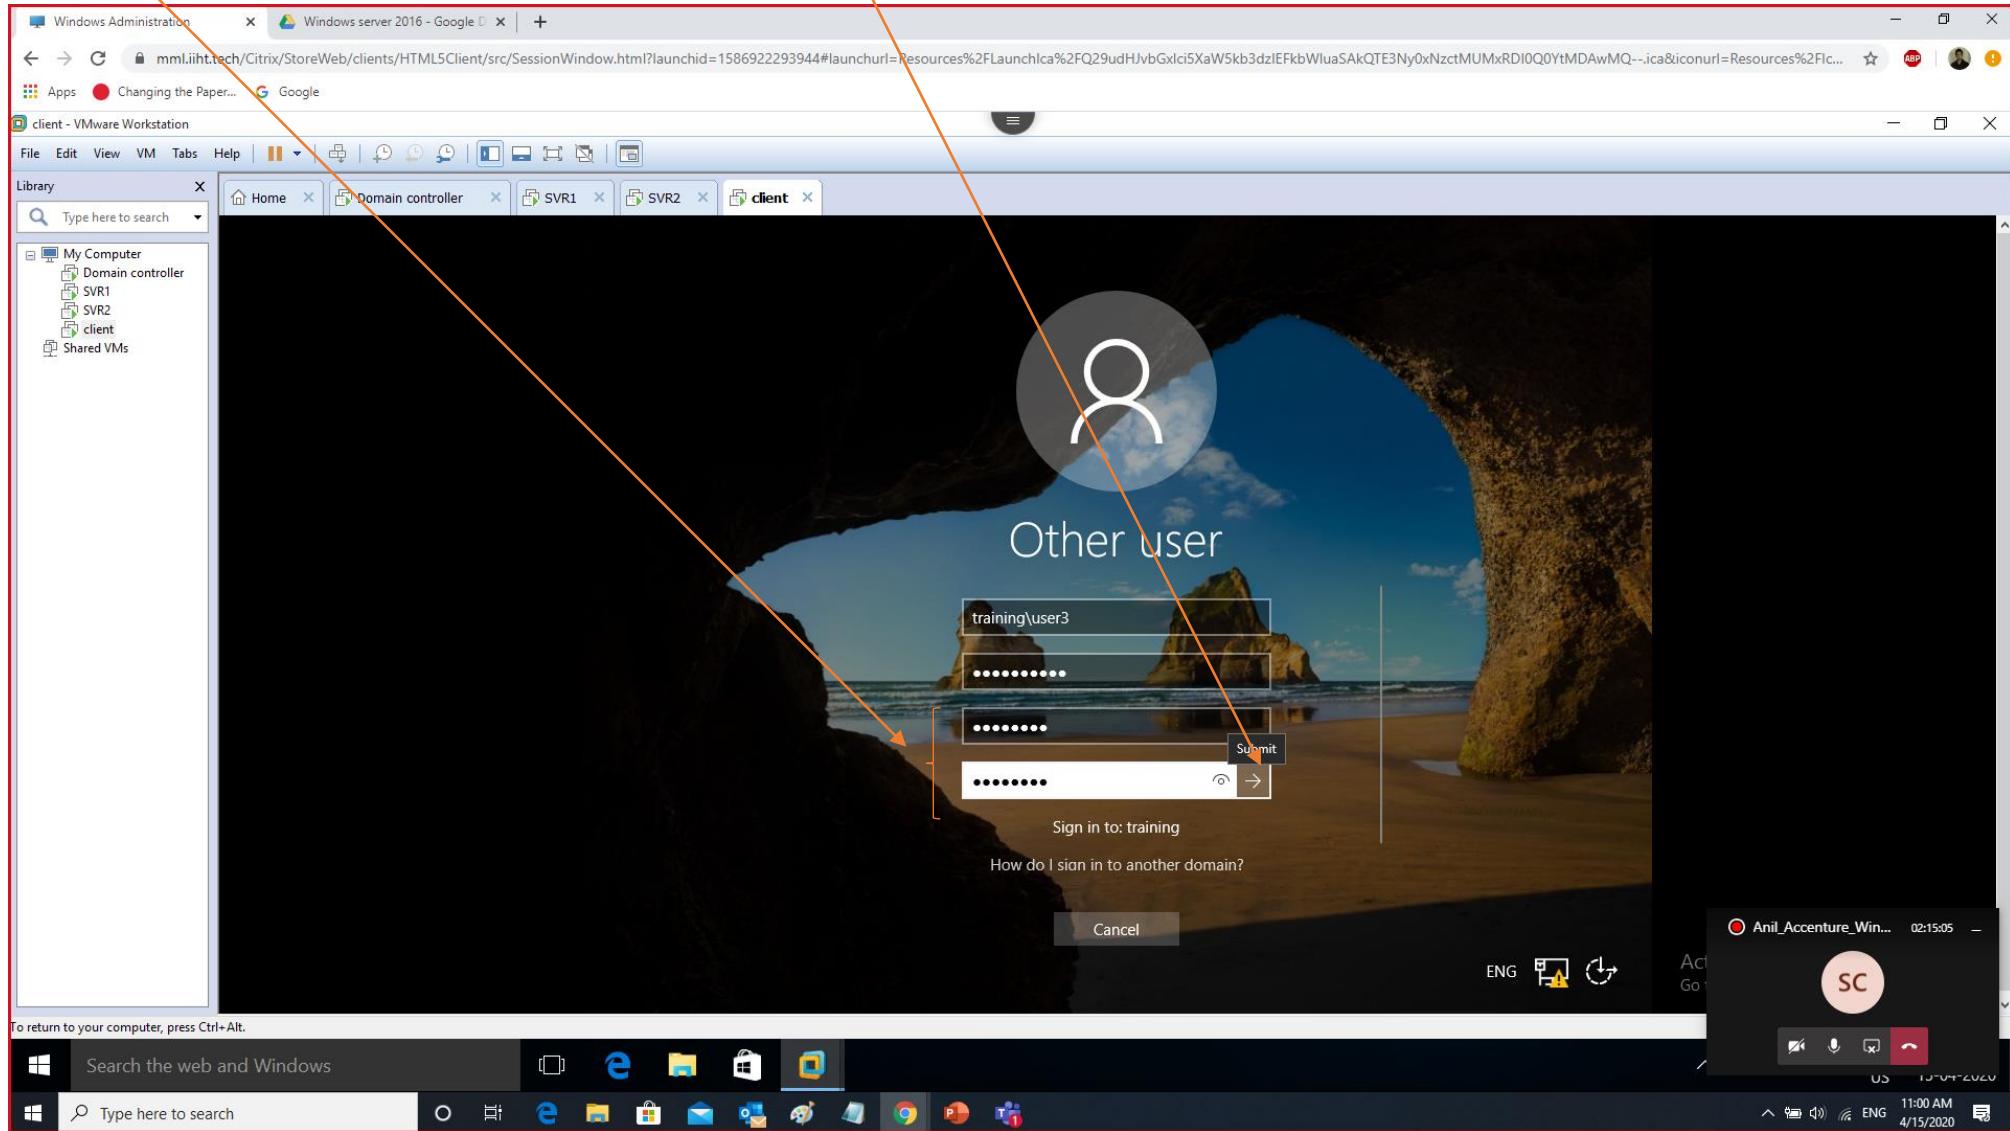

Click on other user and provide the login details of the newly created user

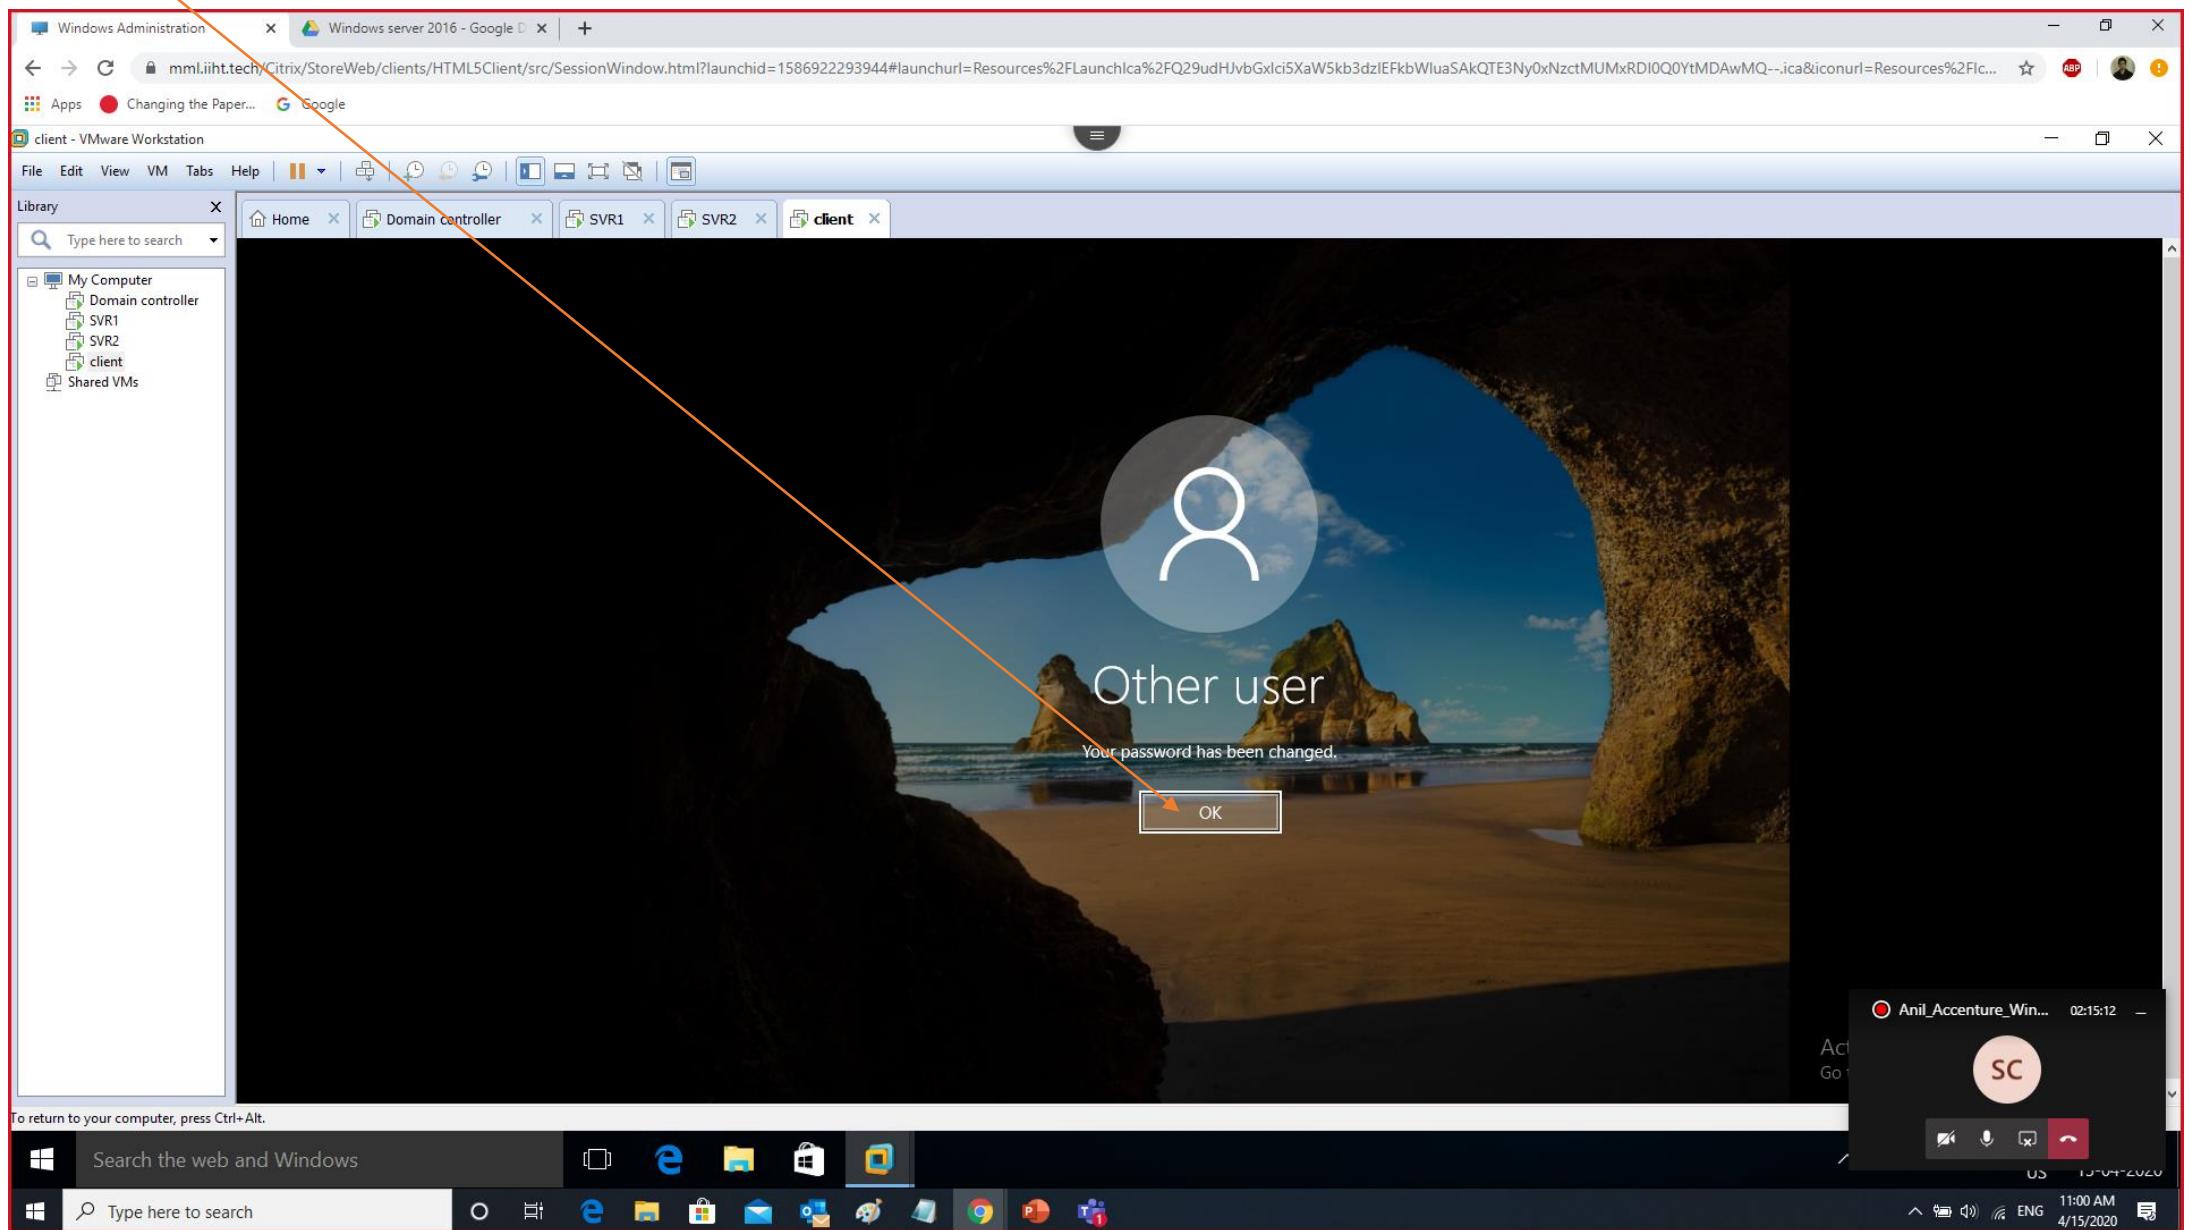

Click OK

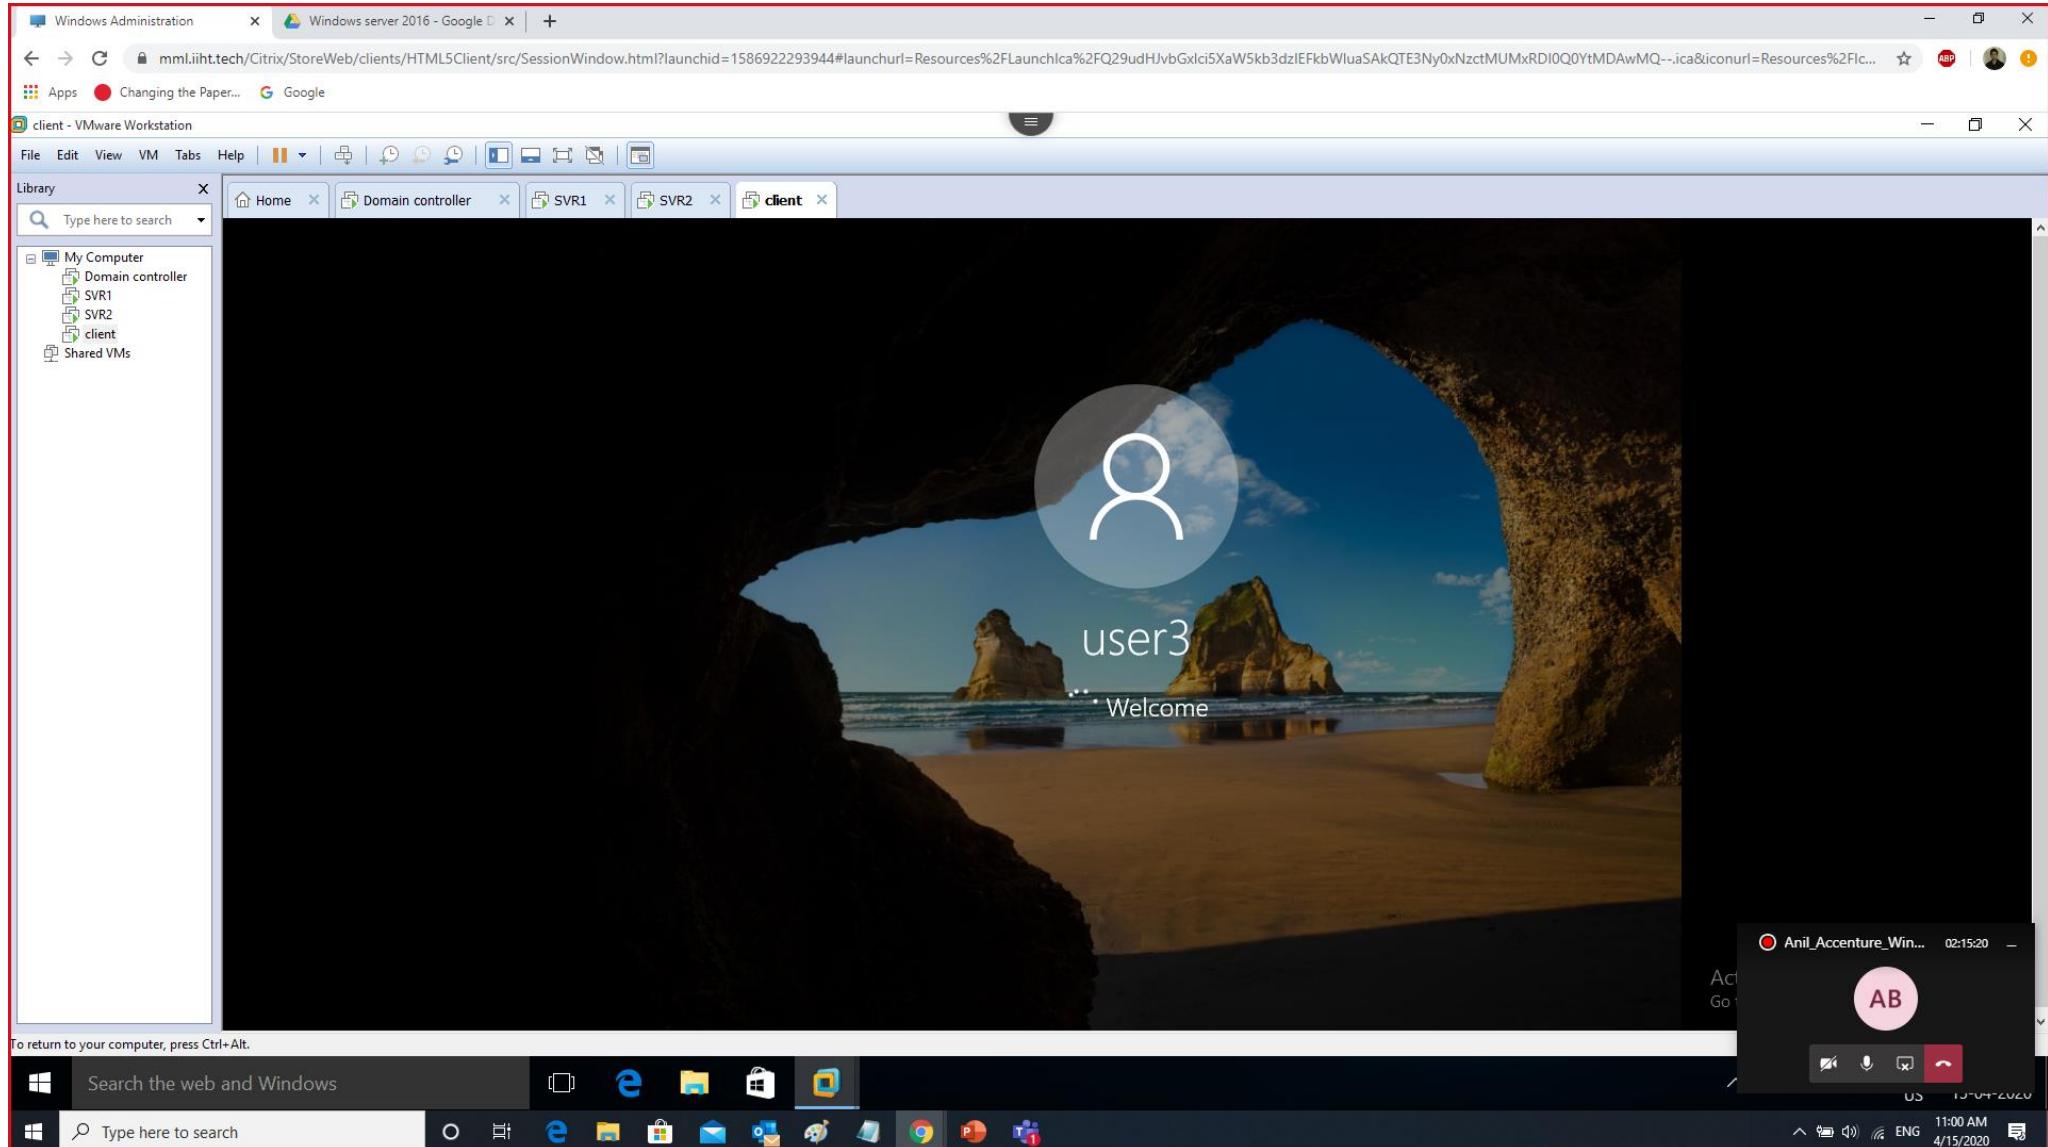

Provide new password for the user and click on submit

Click on OK

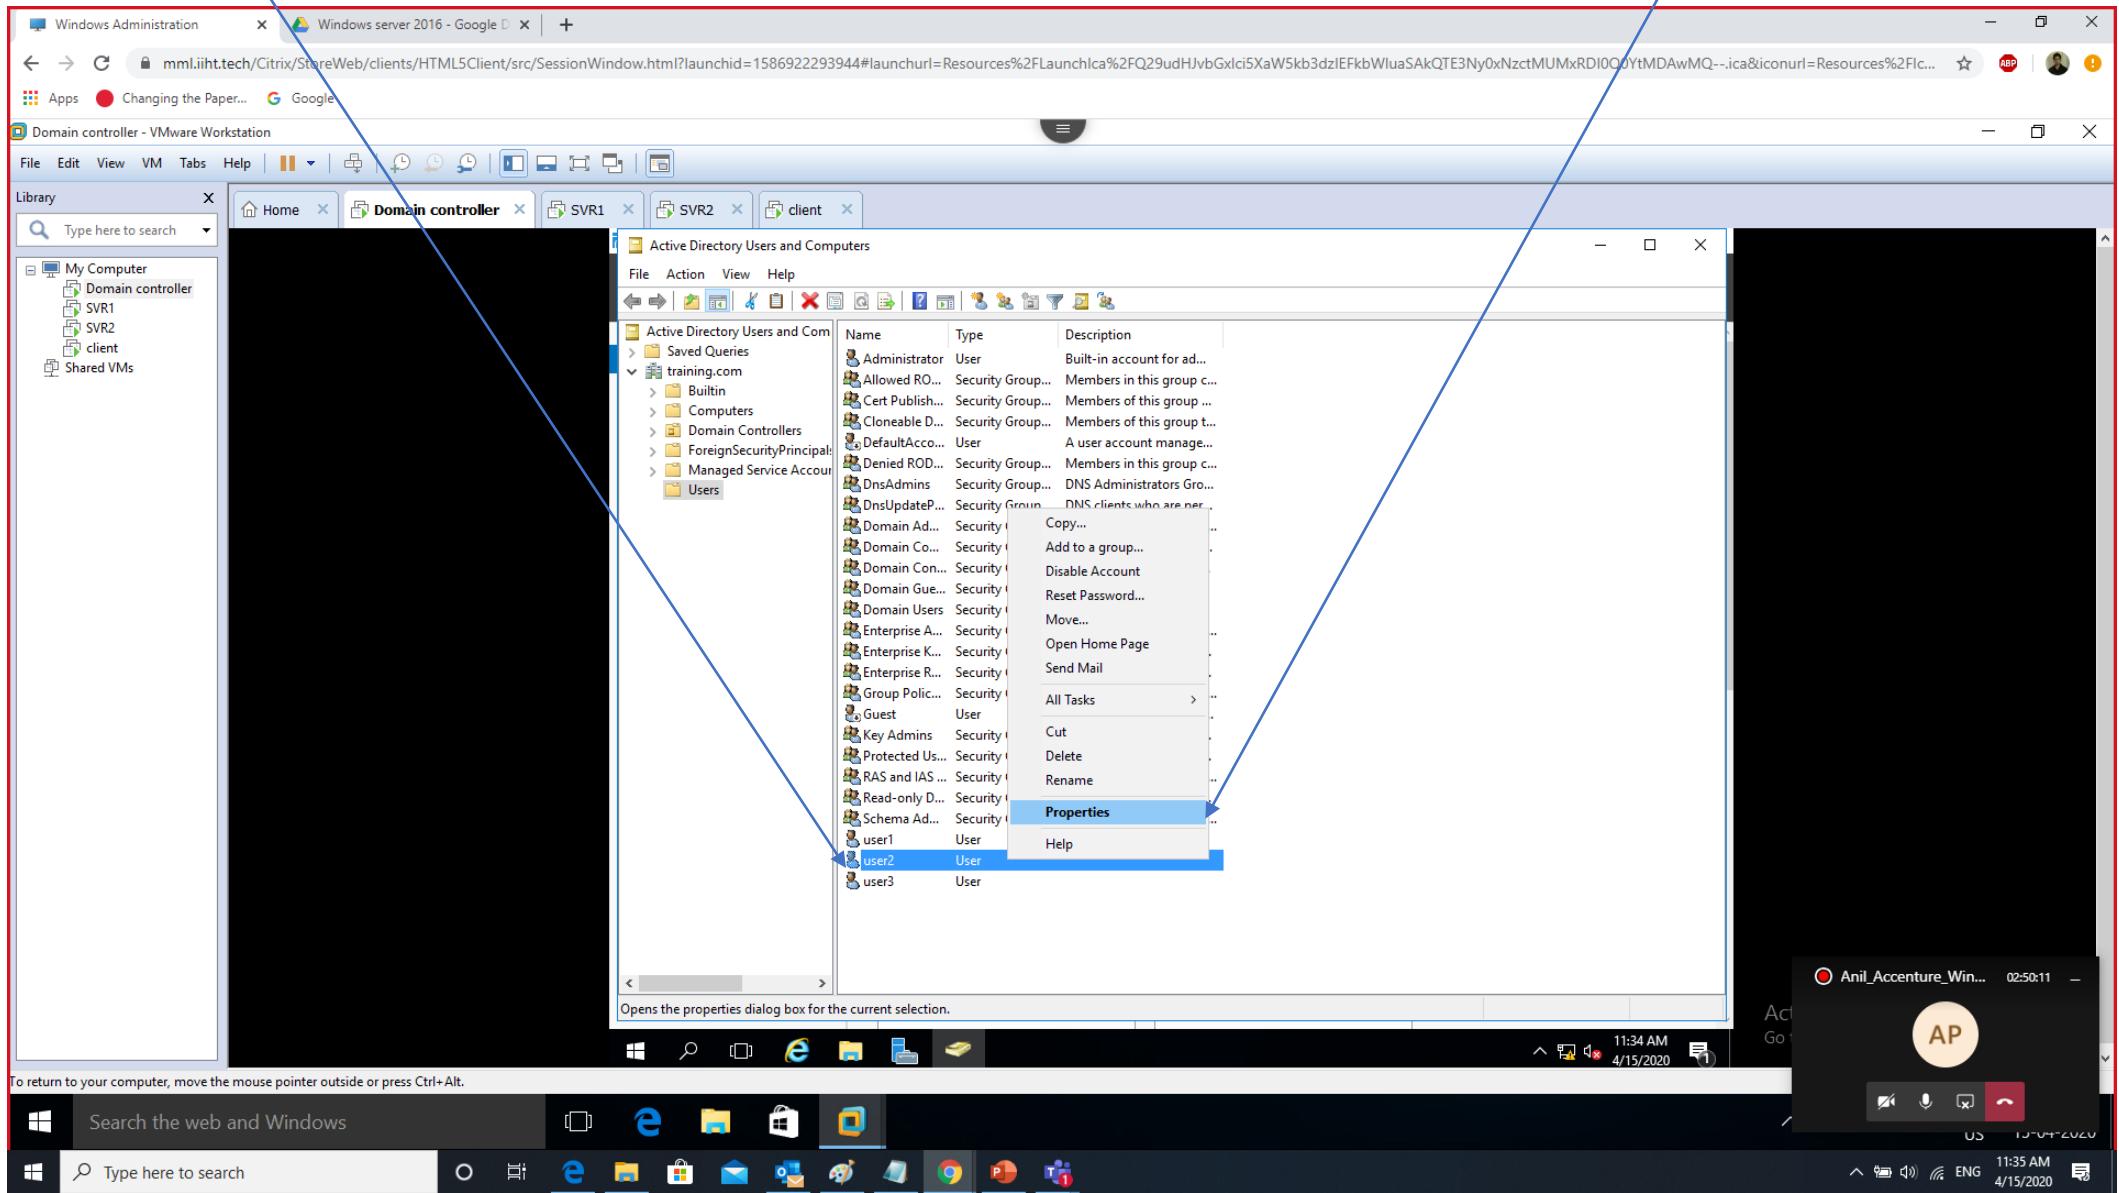

User is able to login 😊

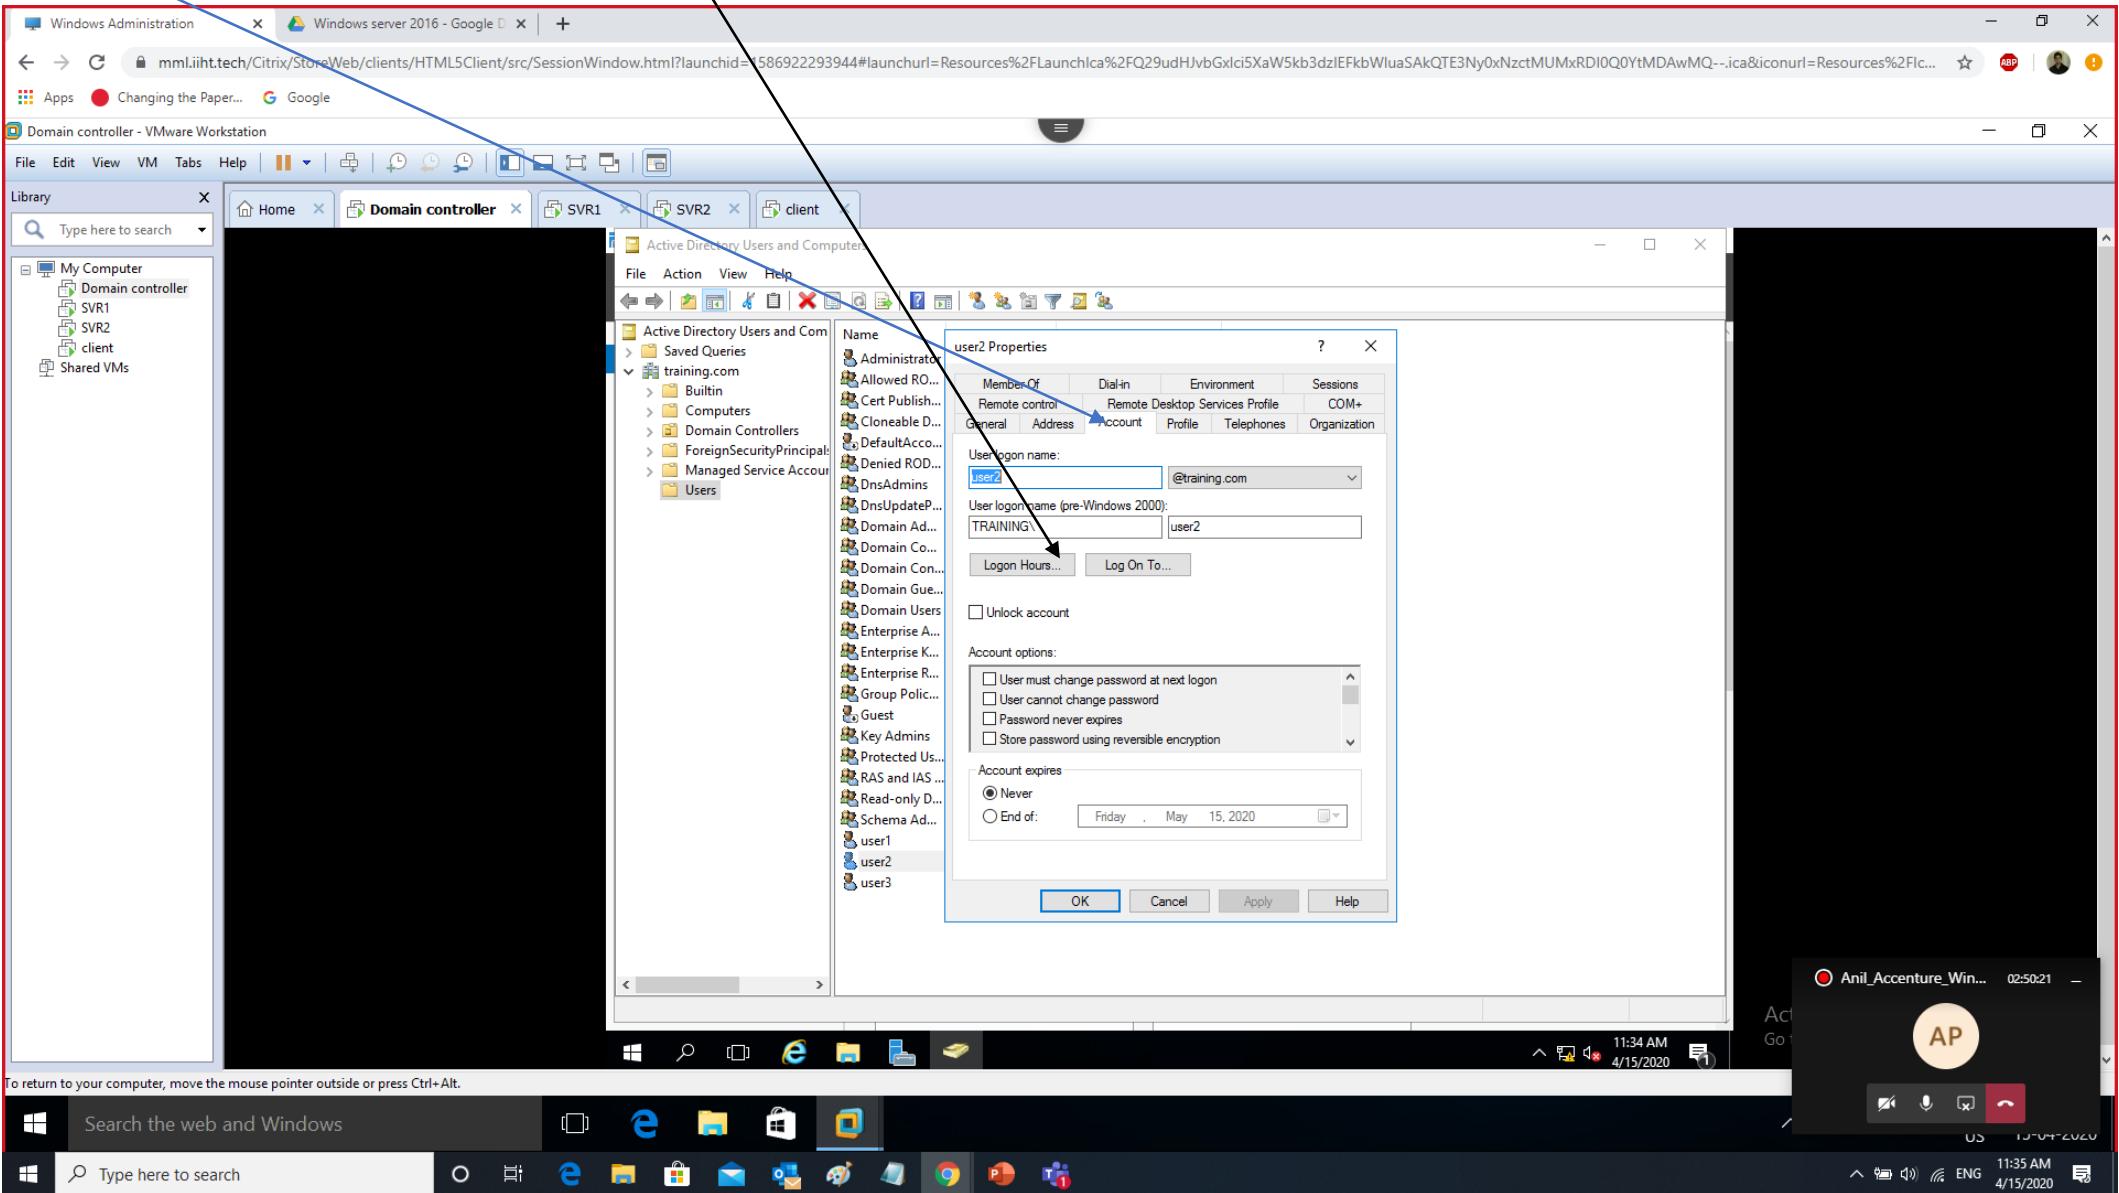

TASK 7

Applying time restriction to user login

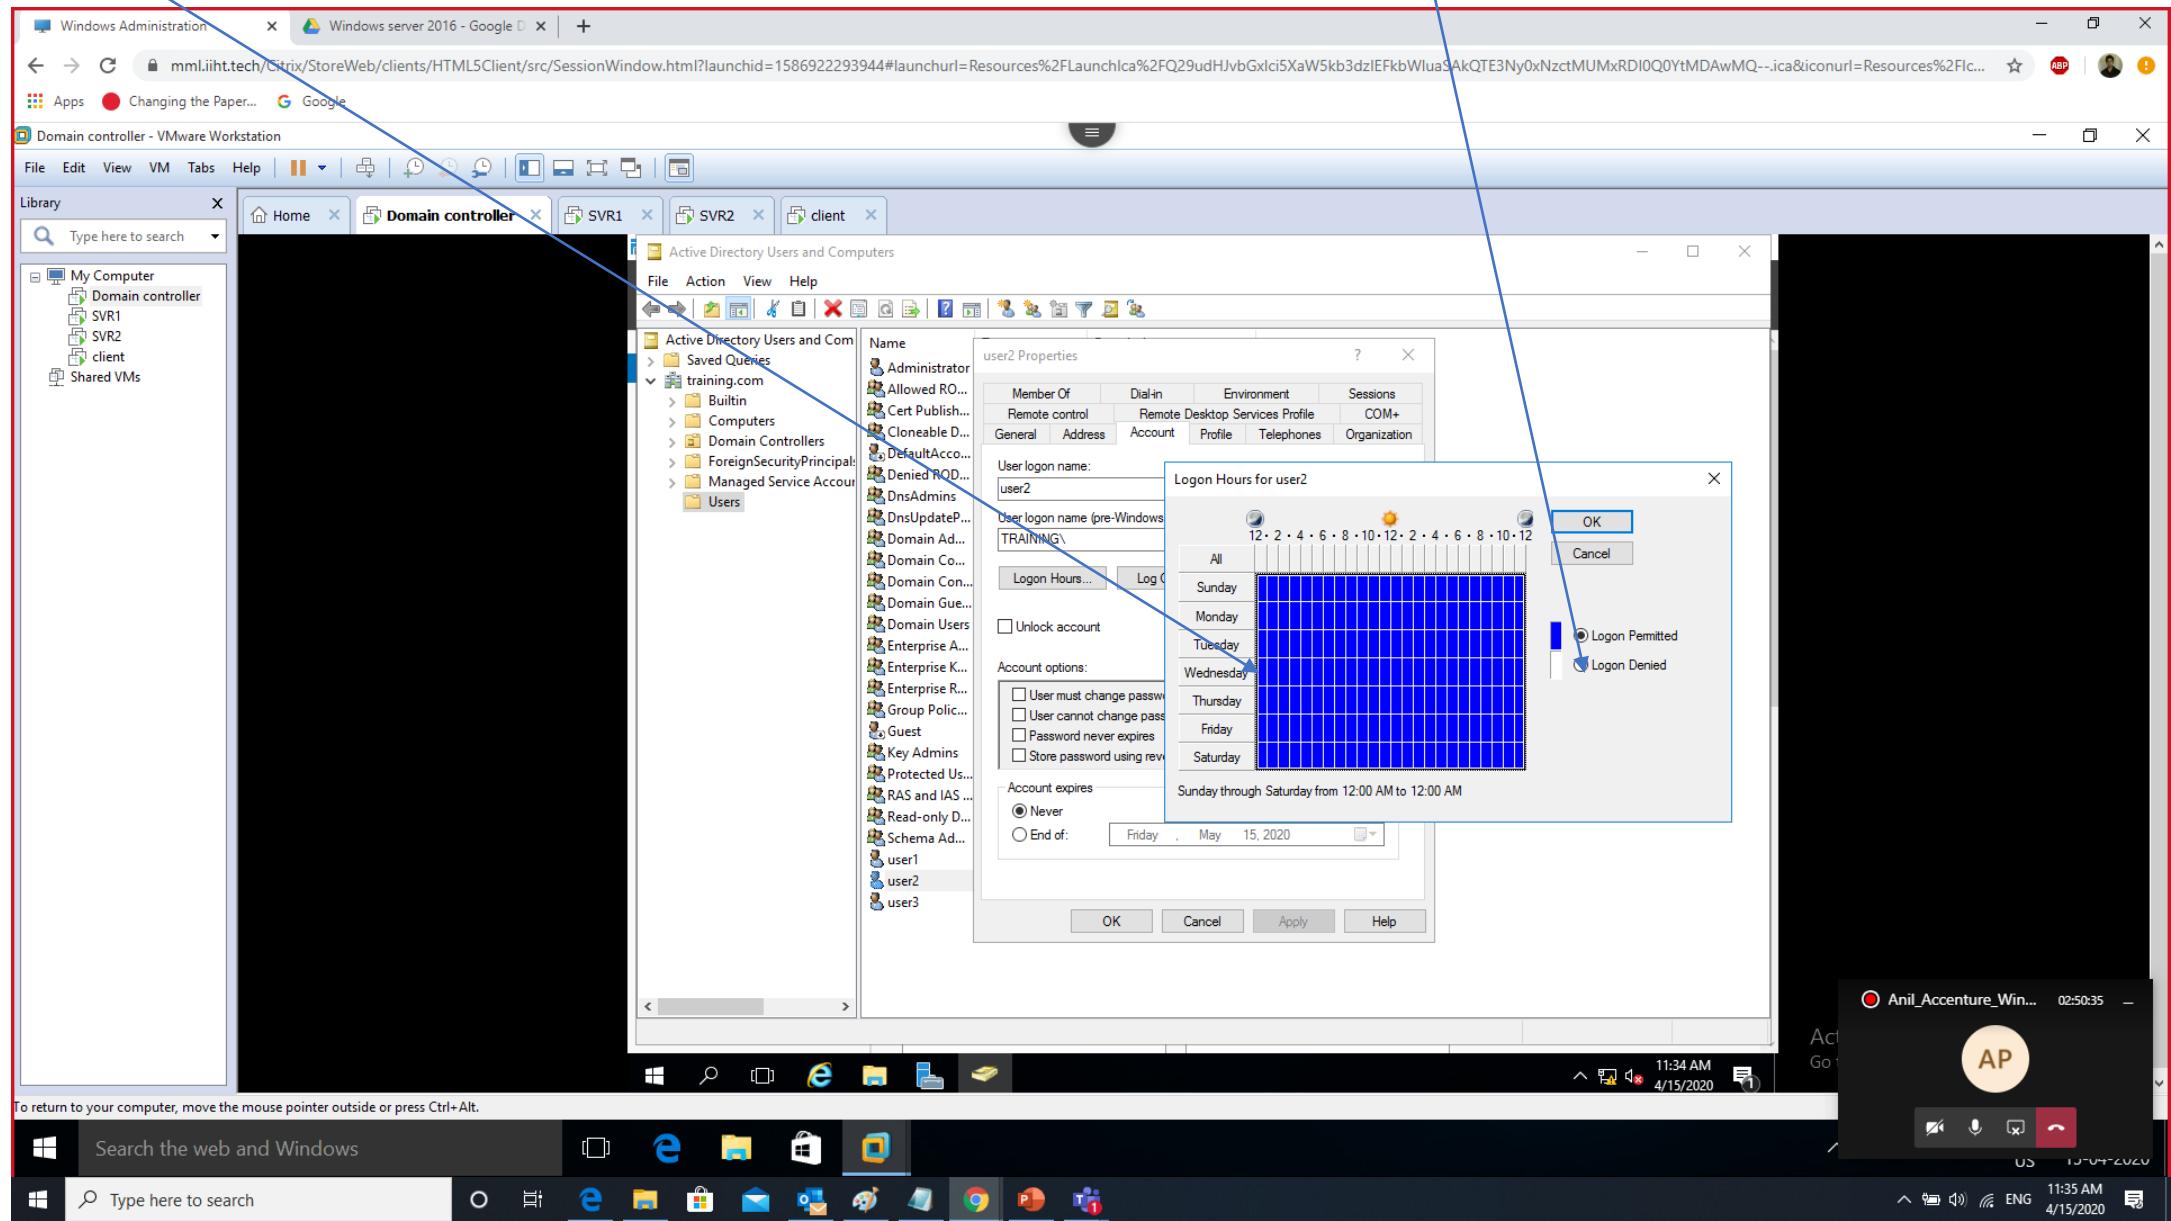

Right click on user name for which you would like to apply time restriction and click on properties

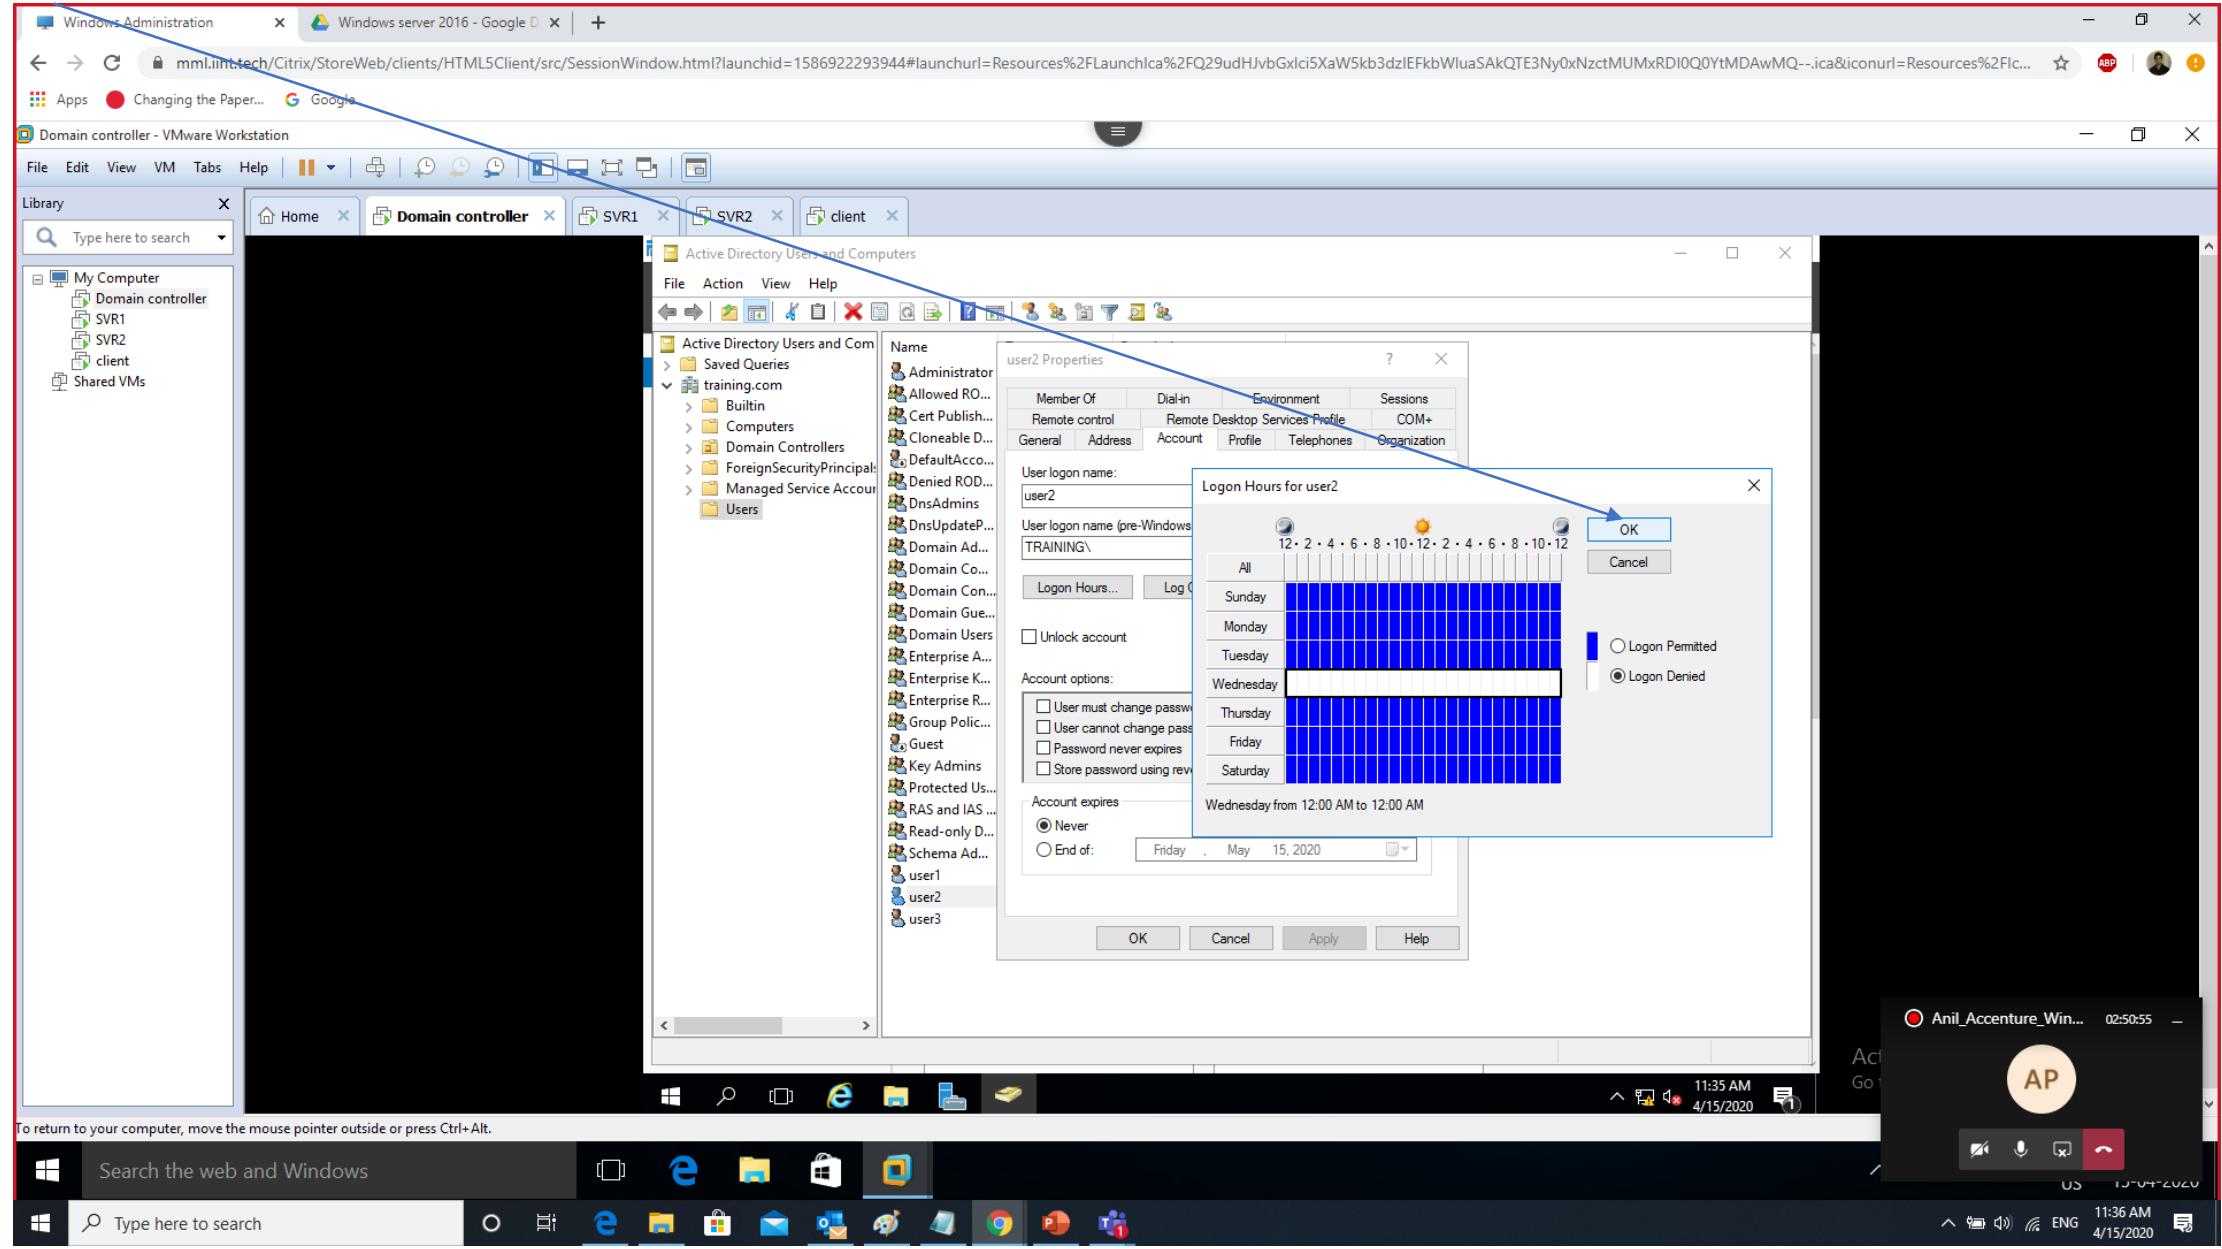

Click on Account tab and then click on Logon Hours

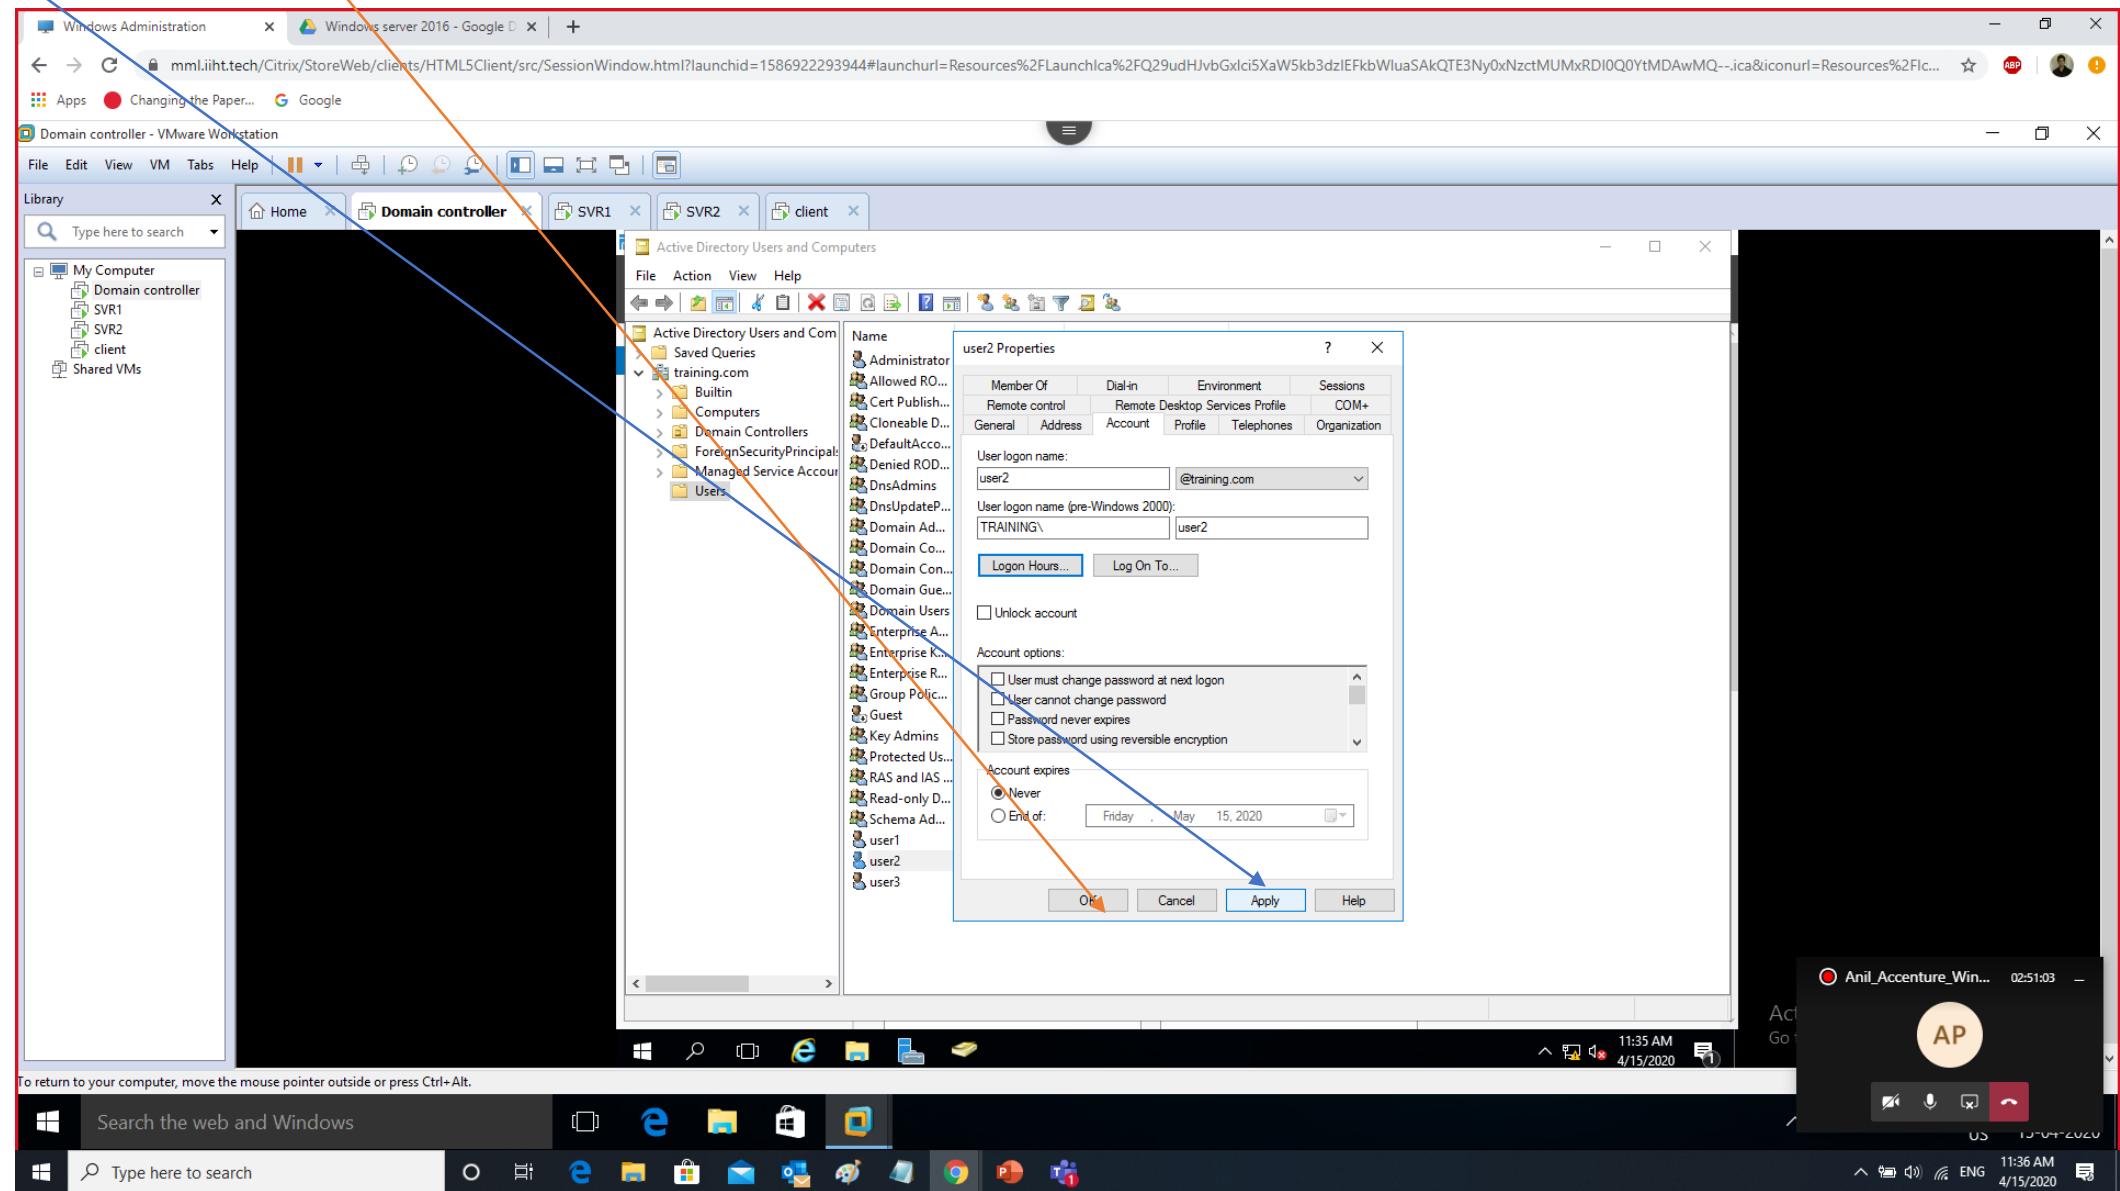

Select the time for which you would like to restrict the user and click on Logon Denied

Click ok

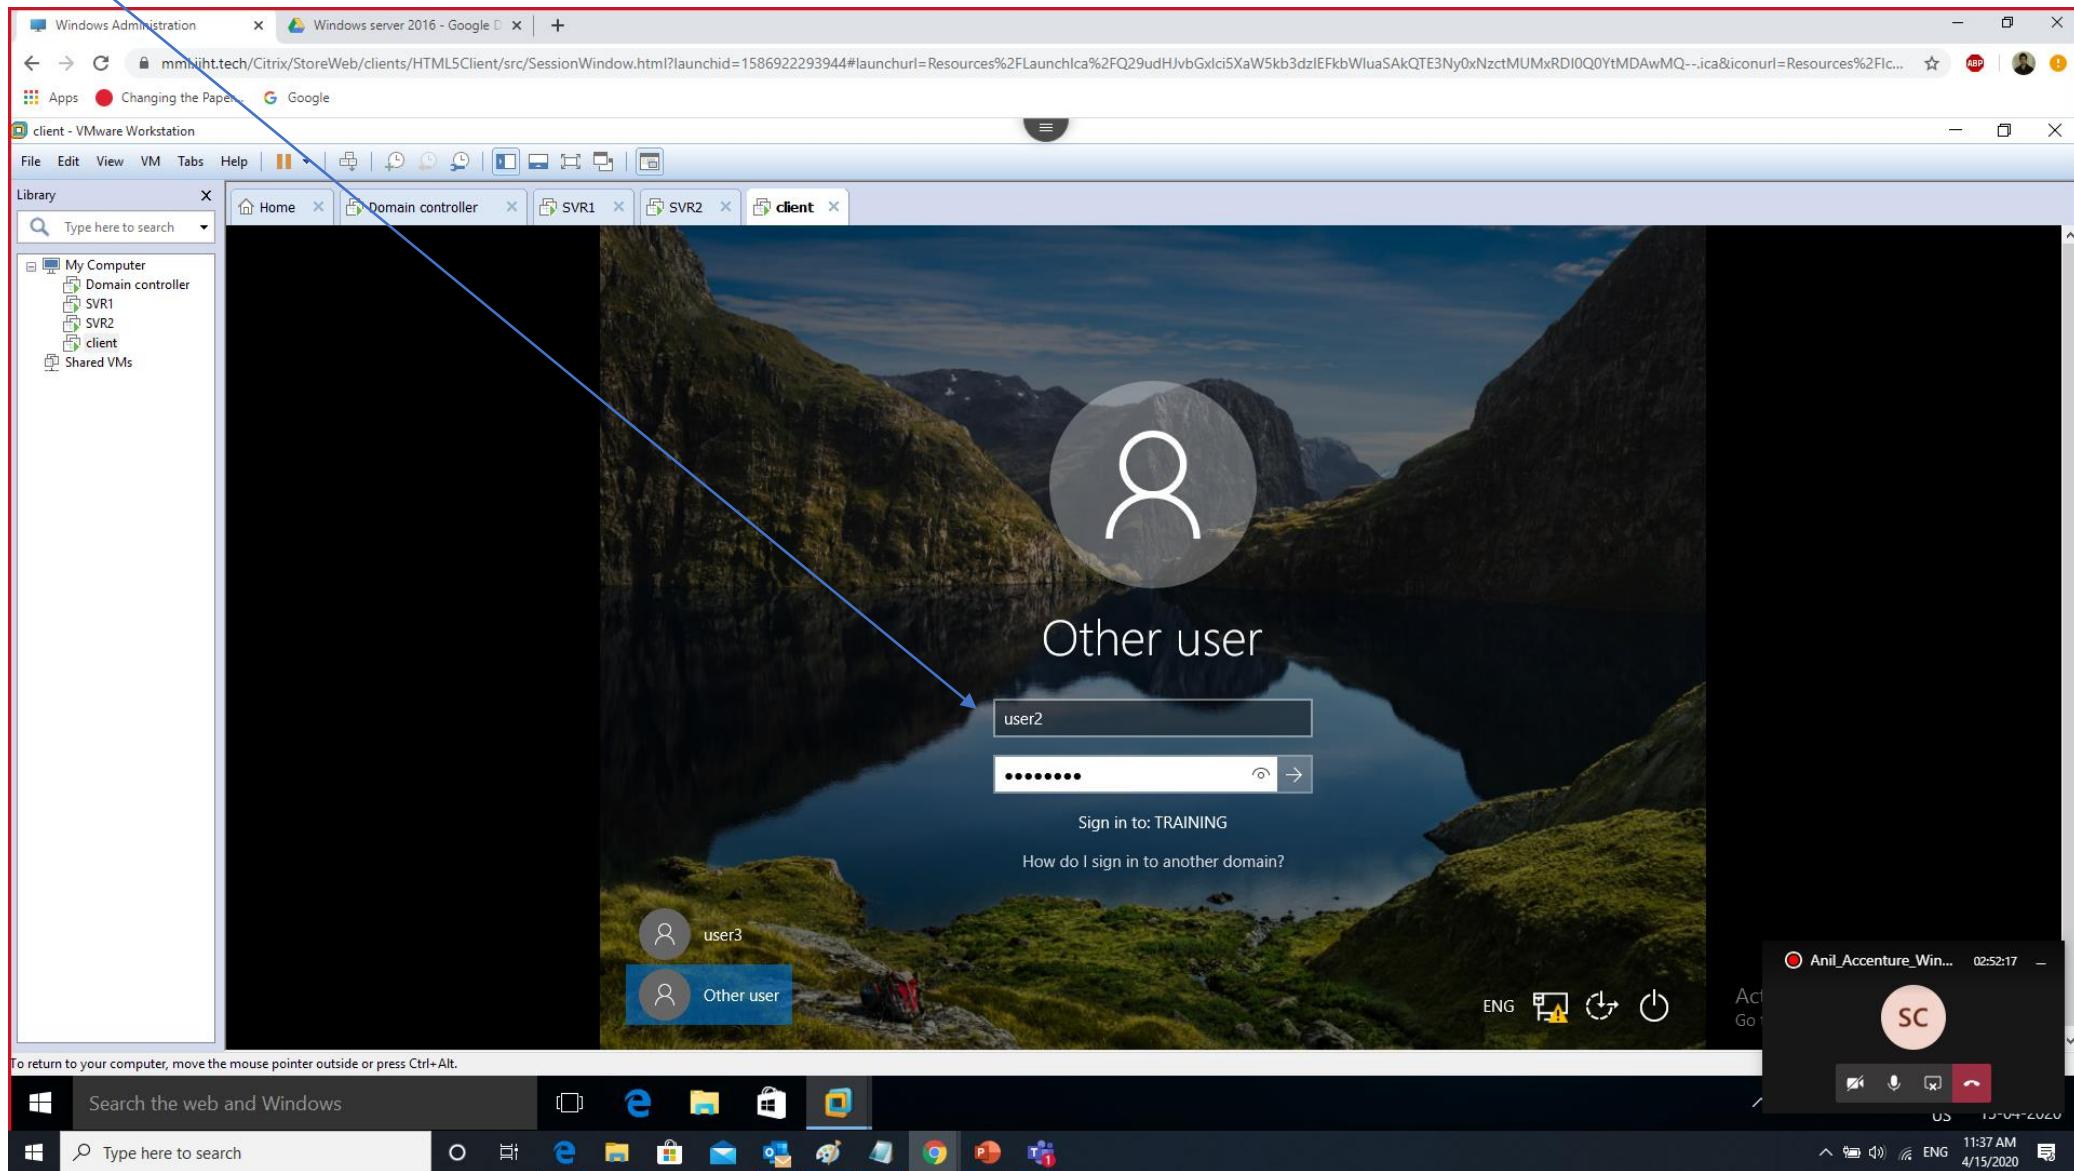

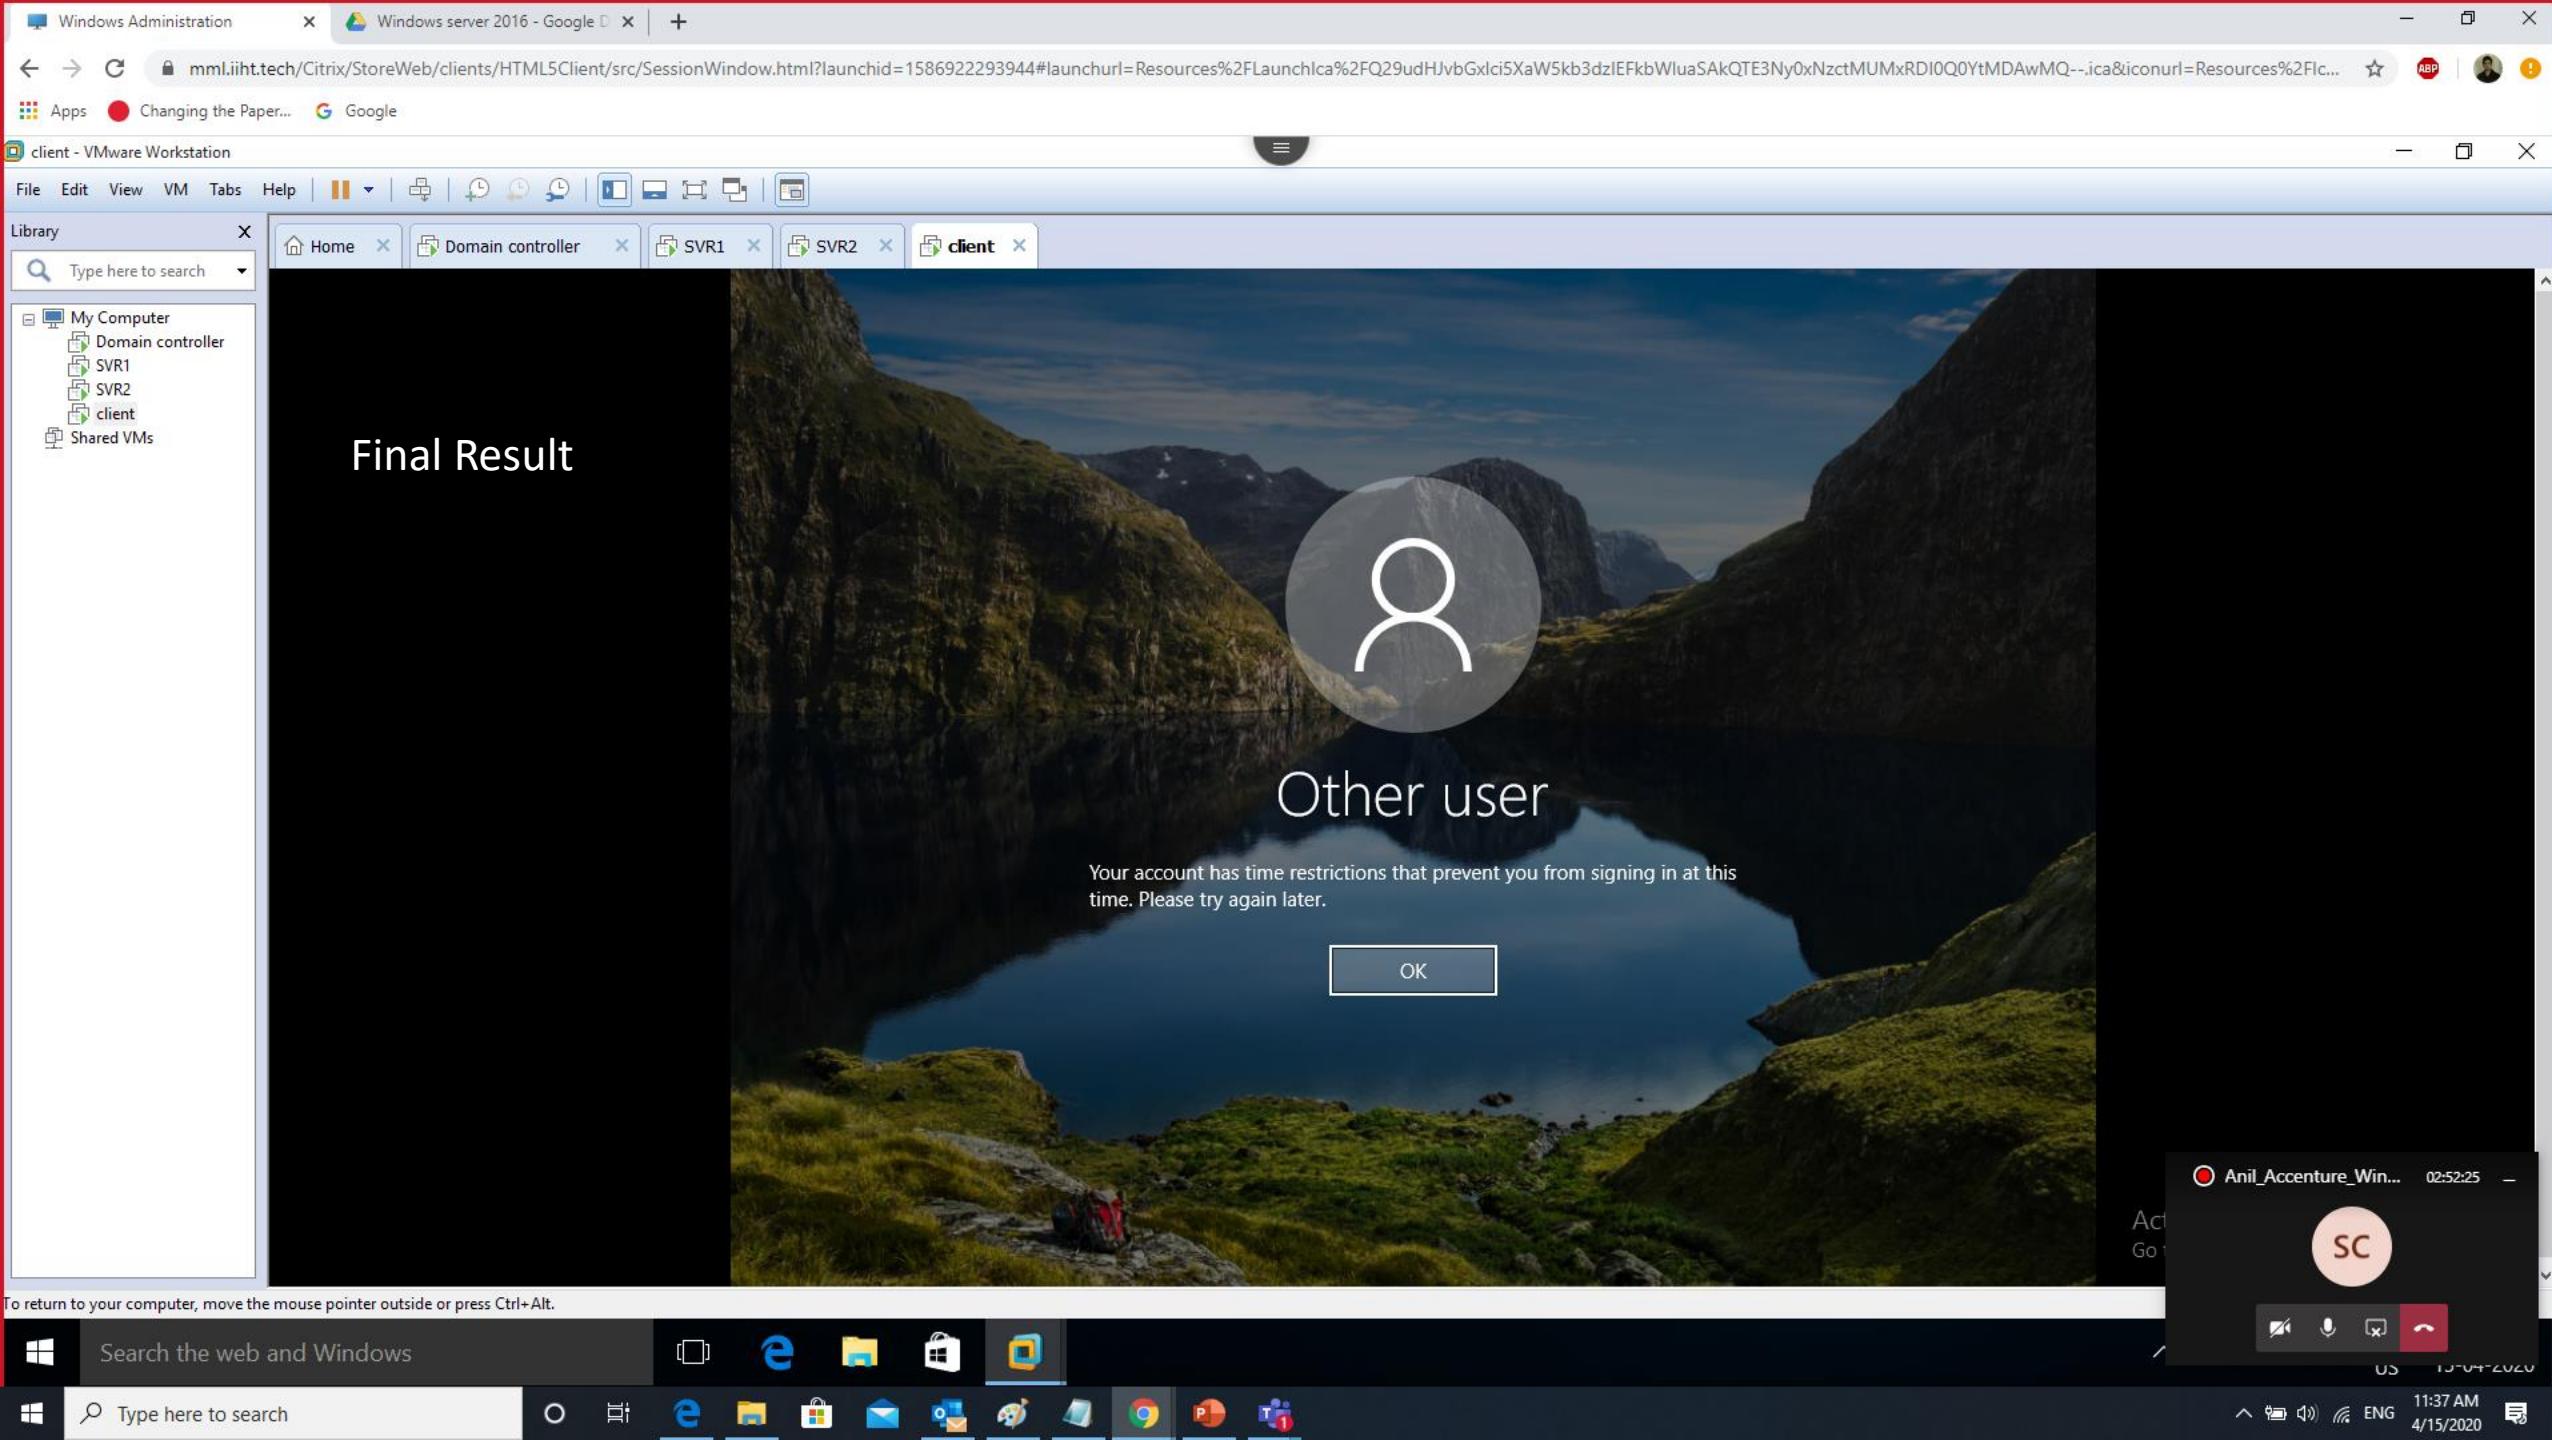

Click on Apply and click OK

To test the result go to client machine and provide the user details at login page for which we have applied time restriction.

Provide user details for which you have applied time restriction and click Submit (Press Enter)

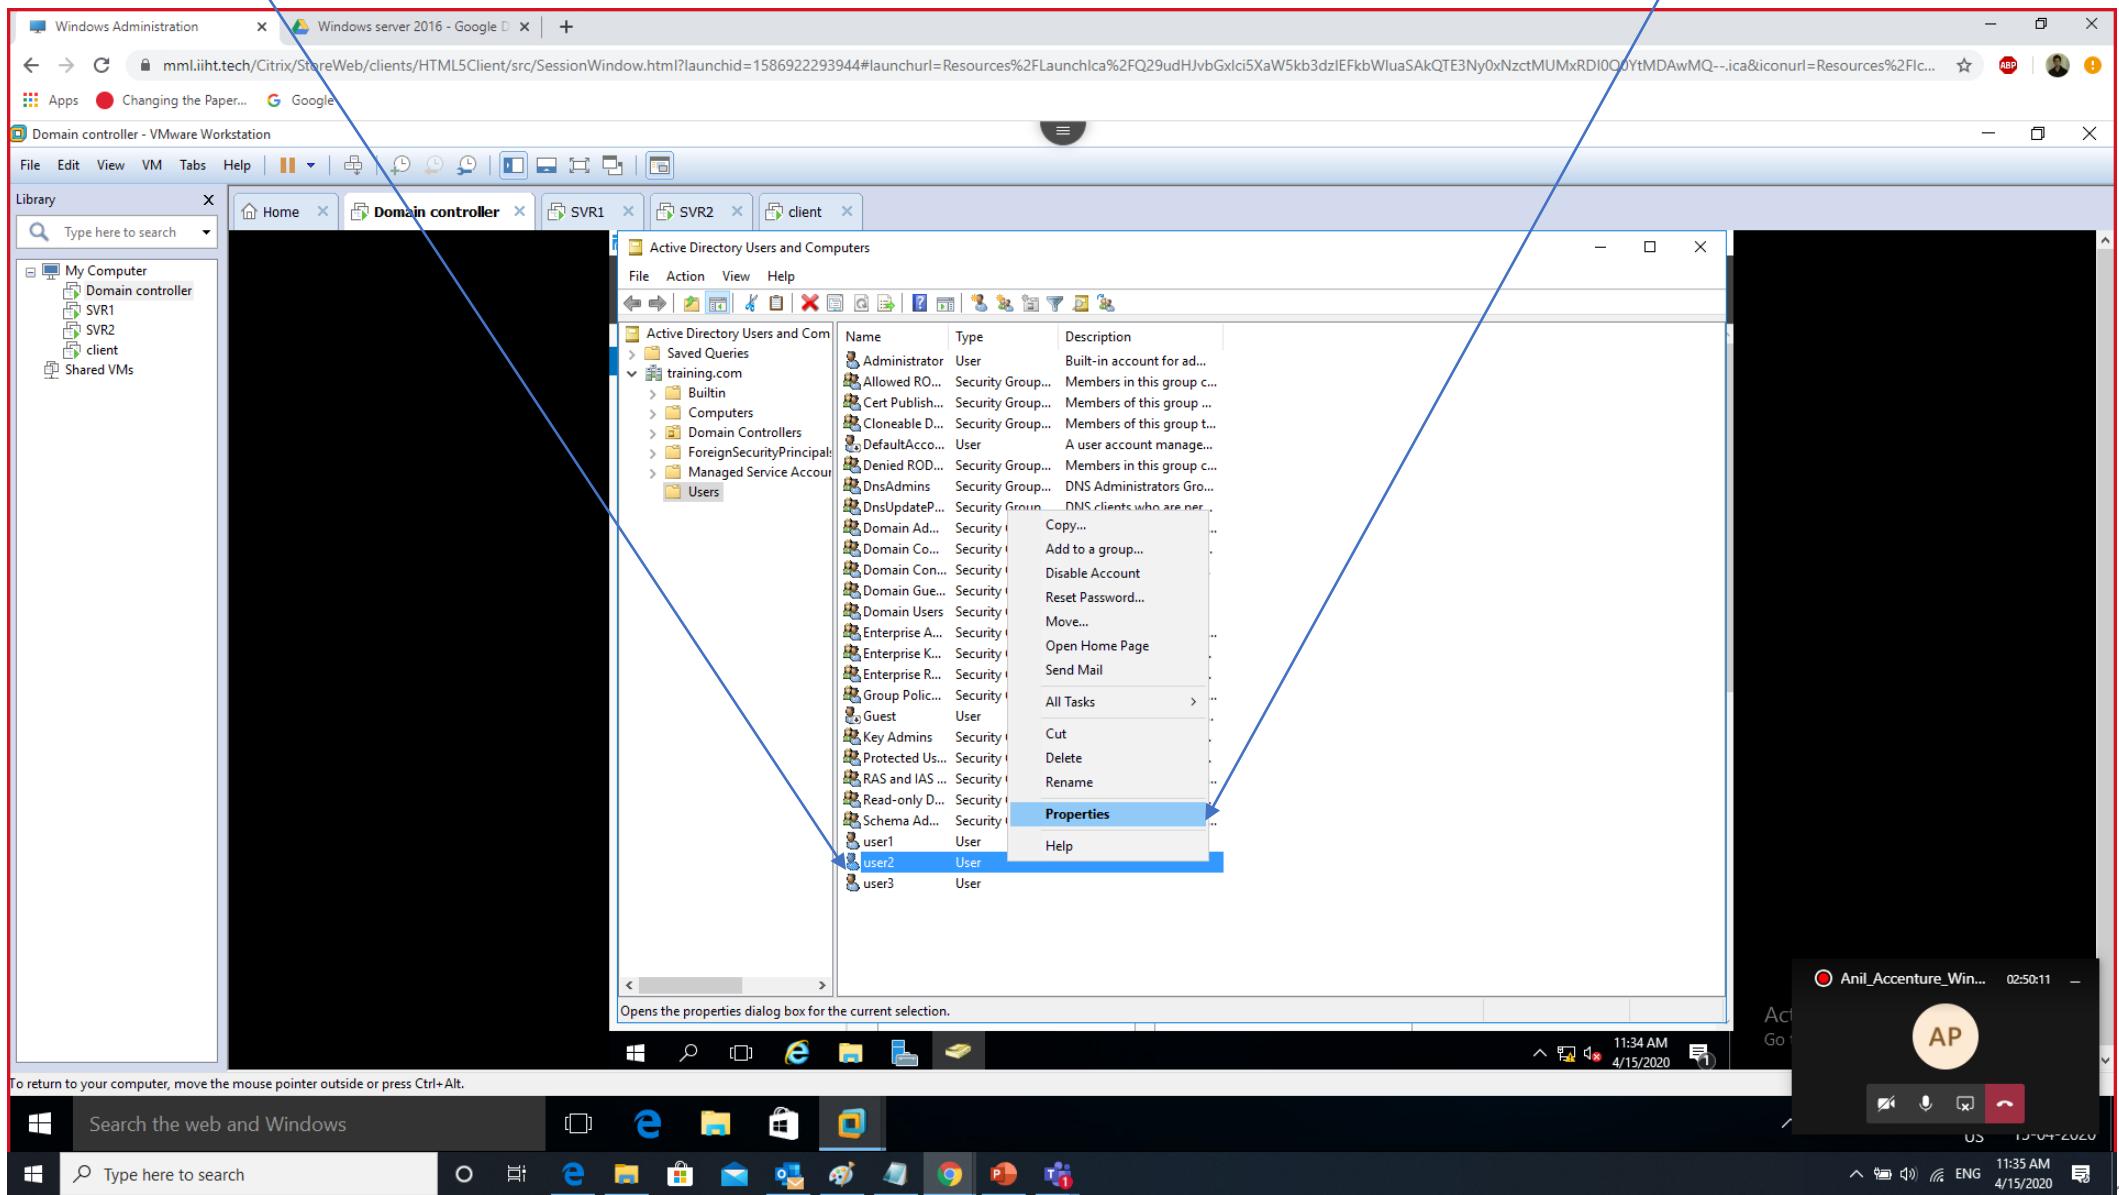

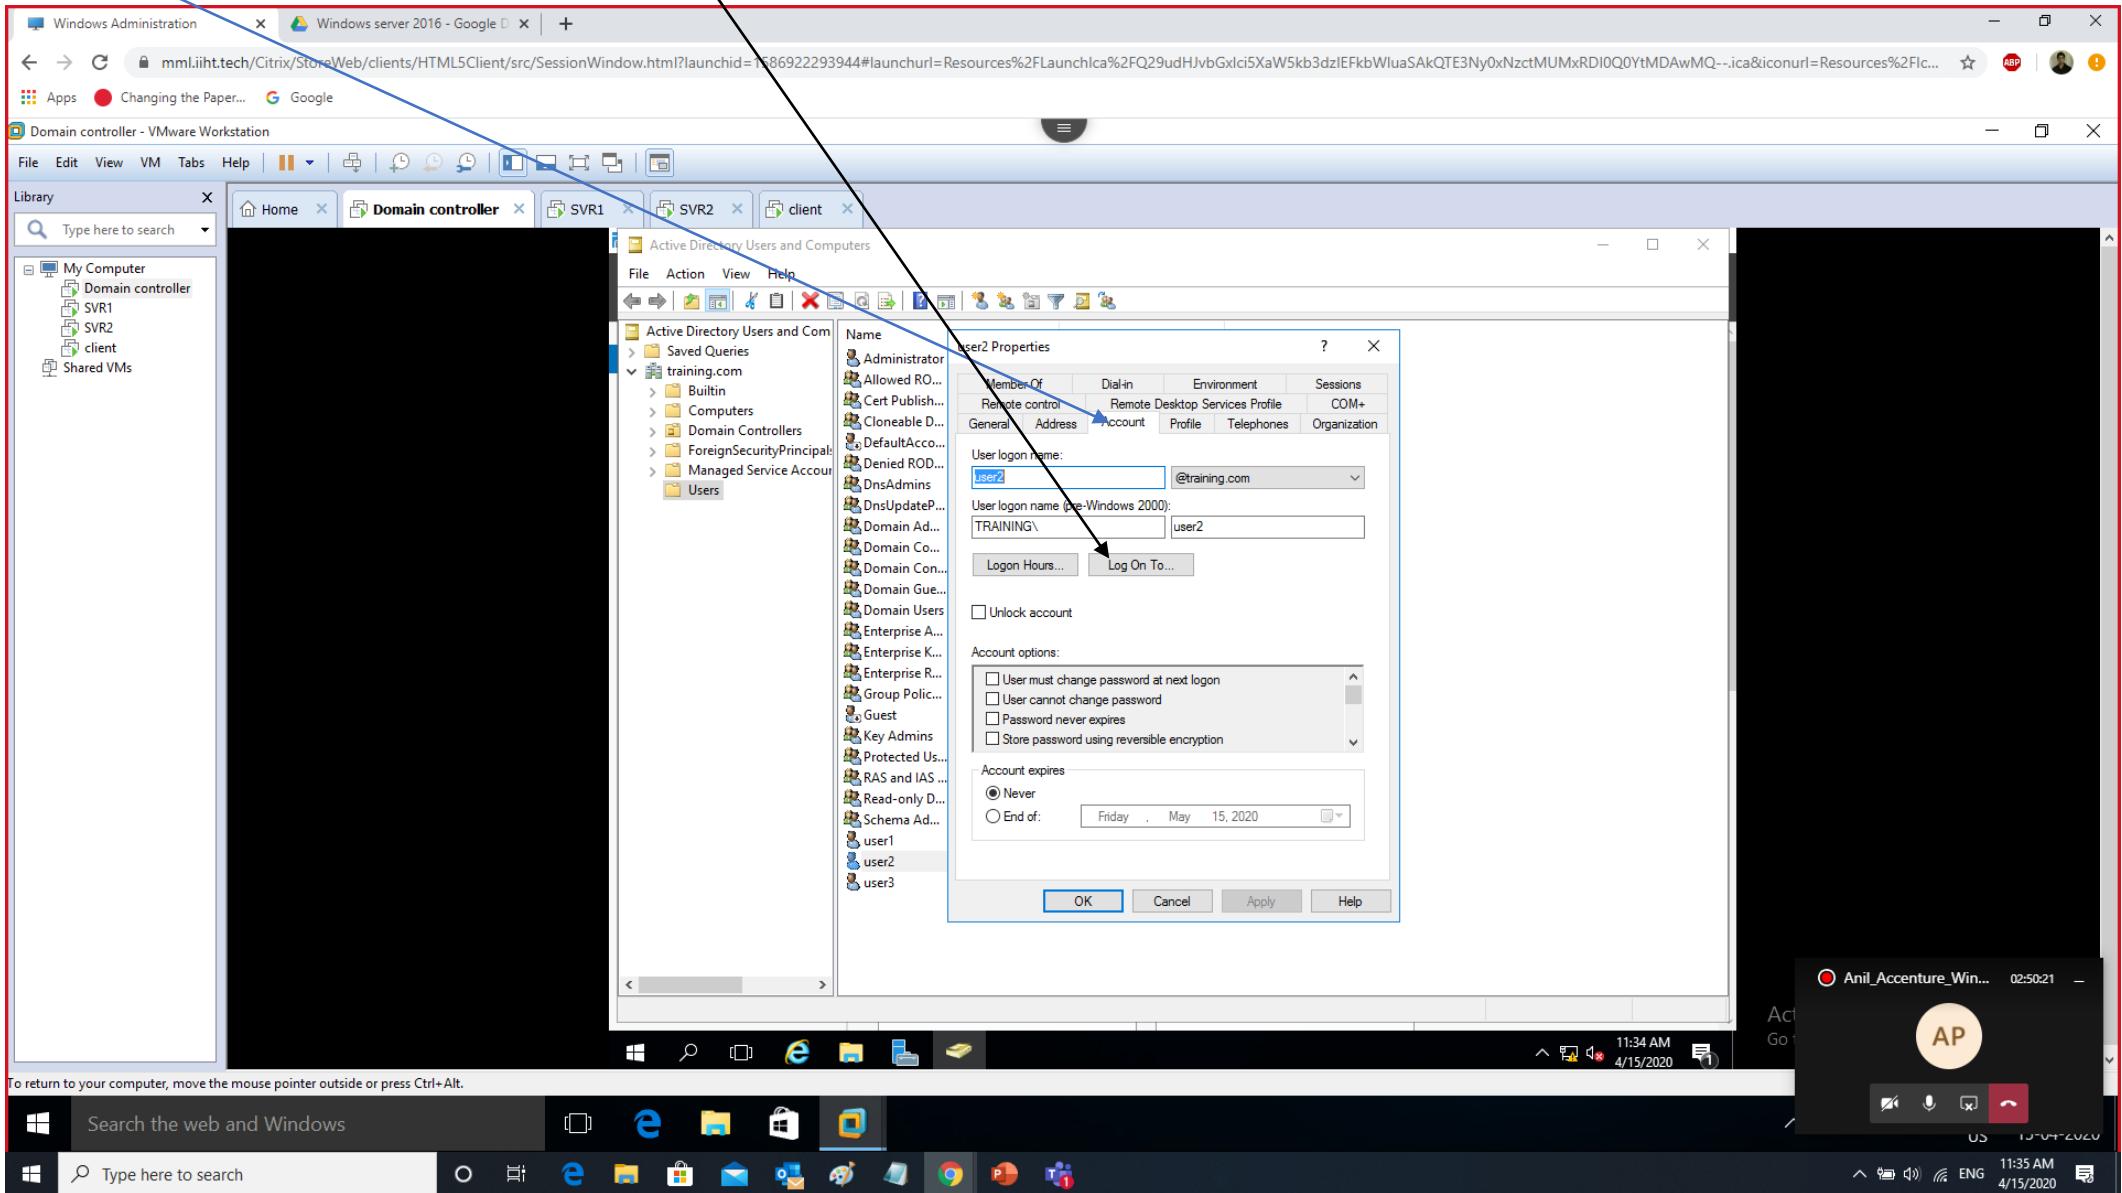

TASK 8

Allowing a user to login on a specific system

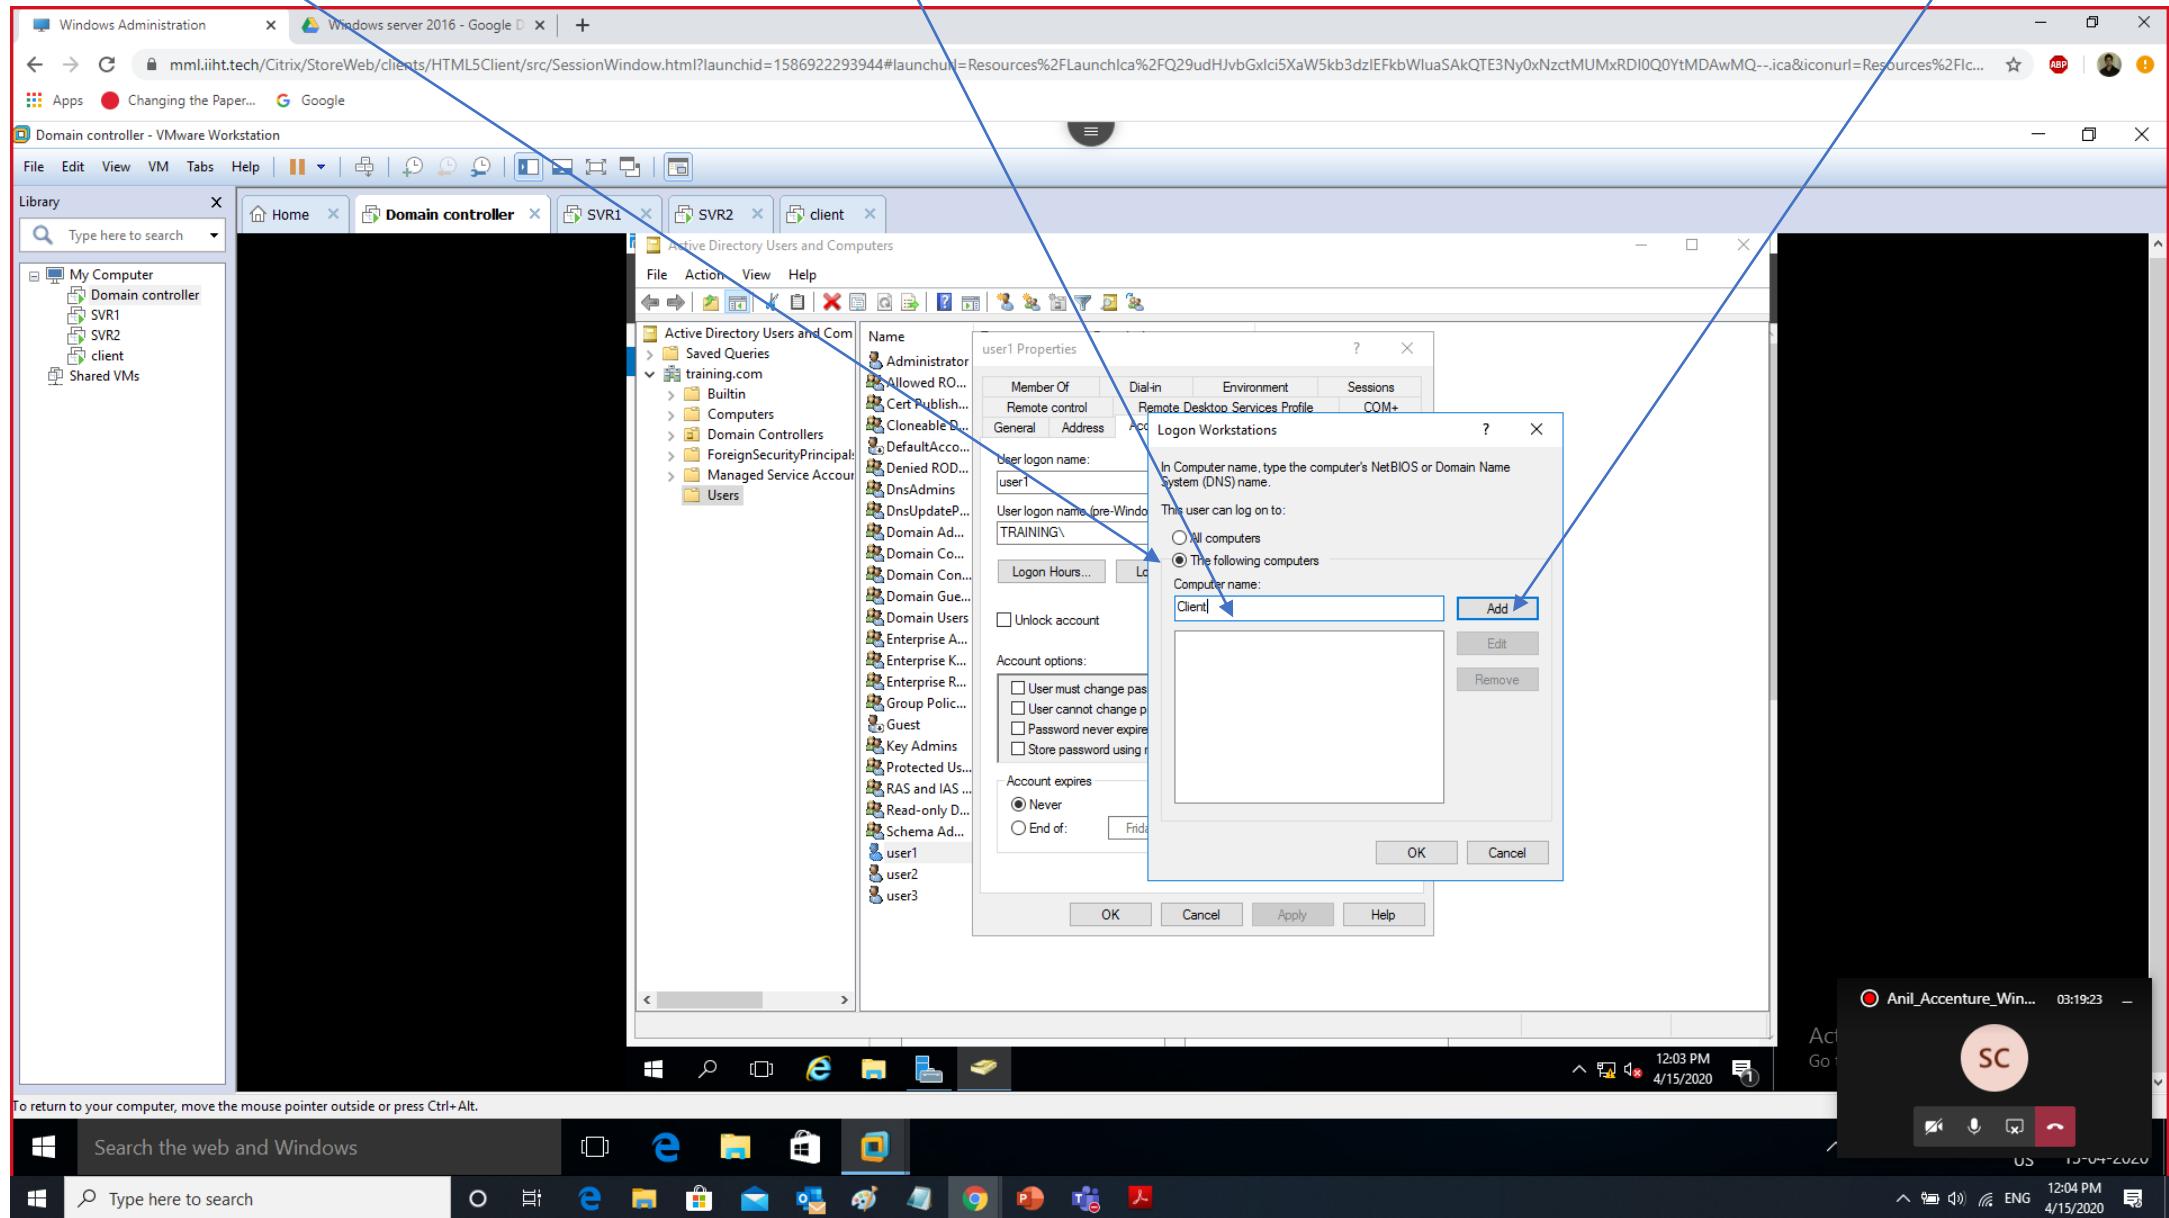

Right click on user name for which you would like to apply time restriction and click on properties

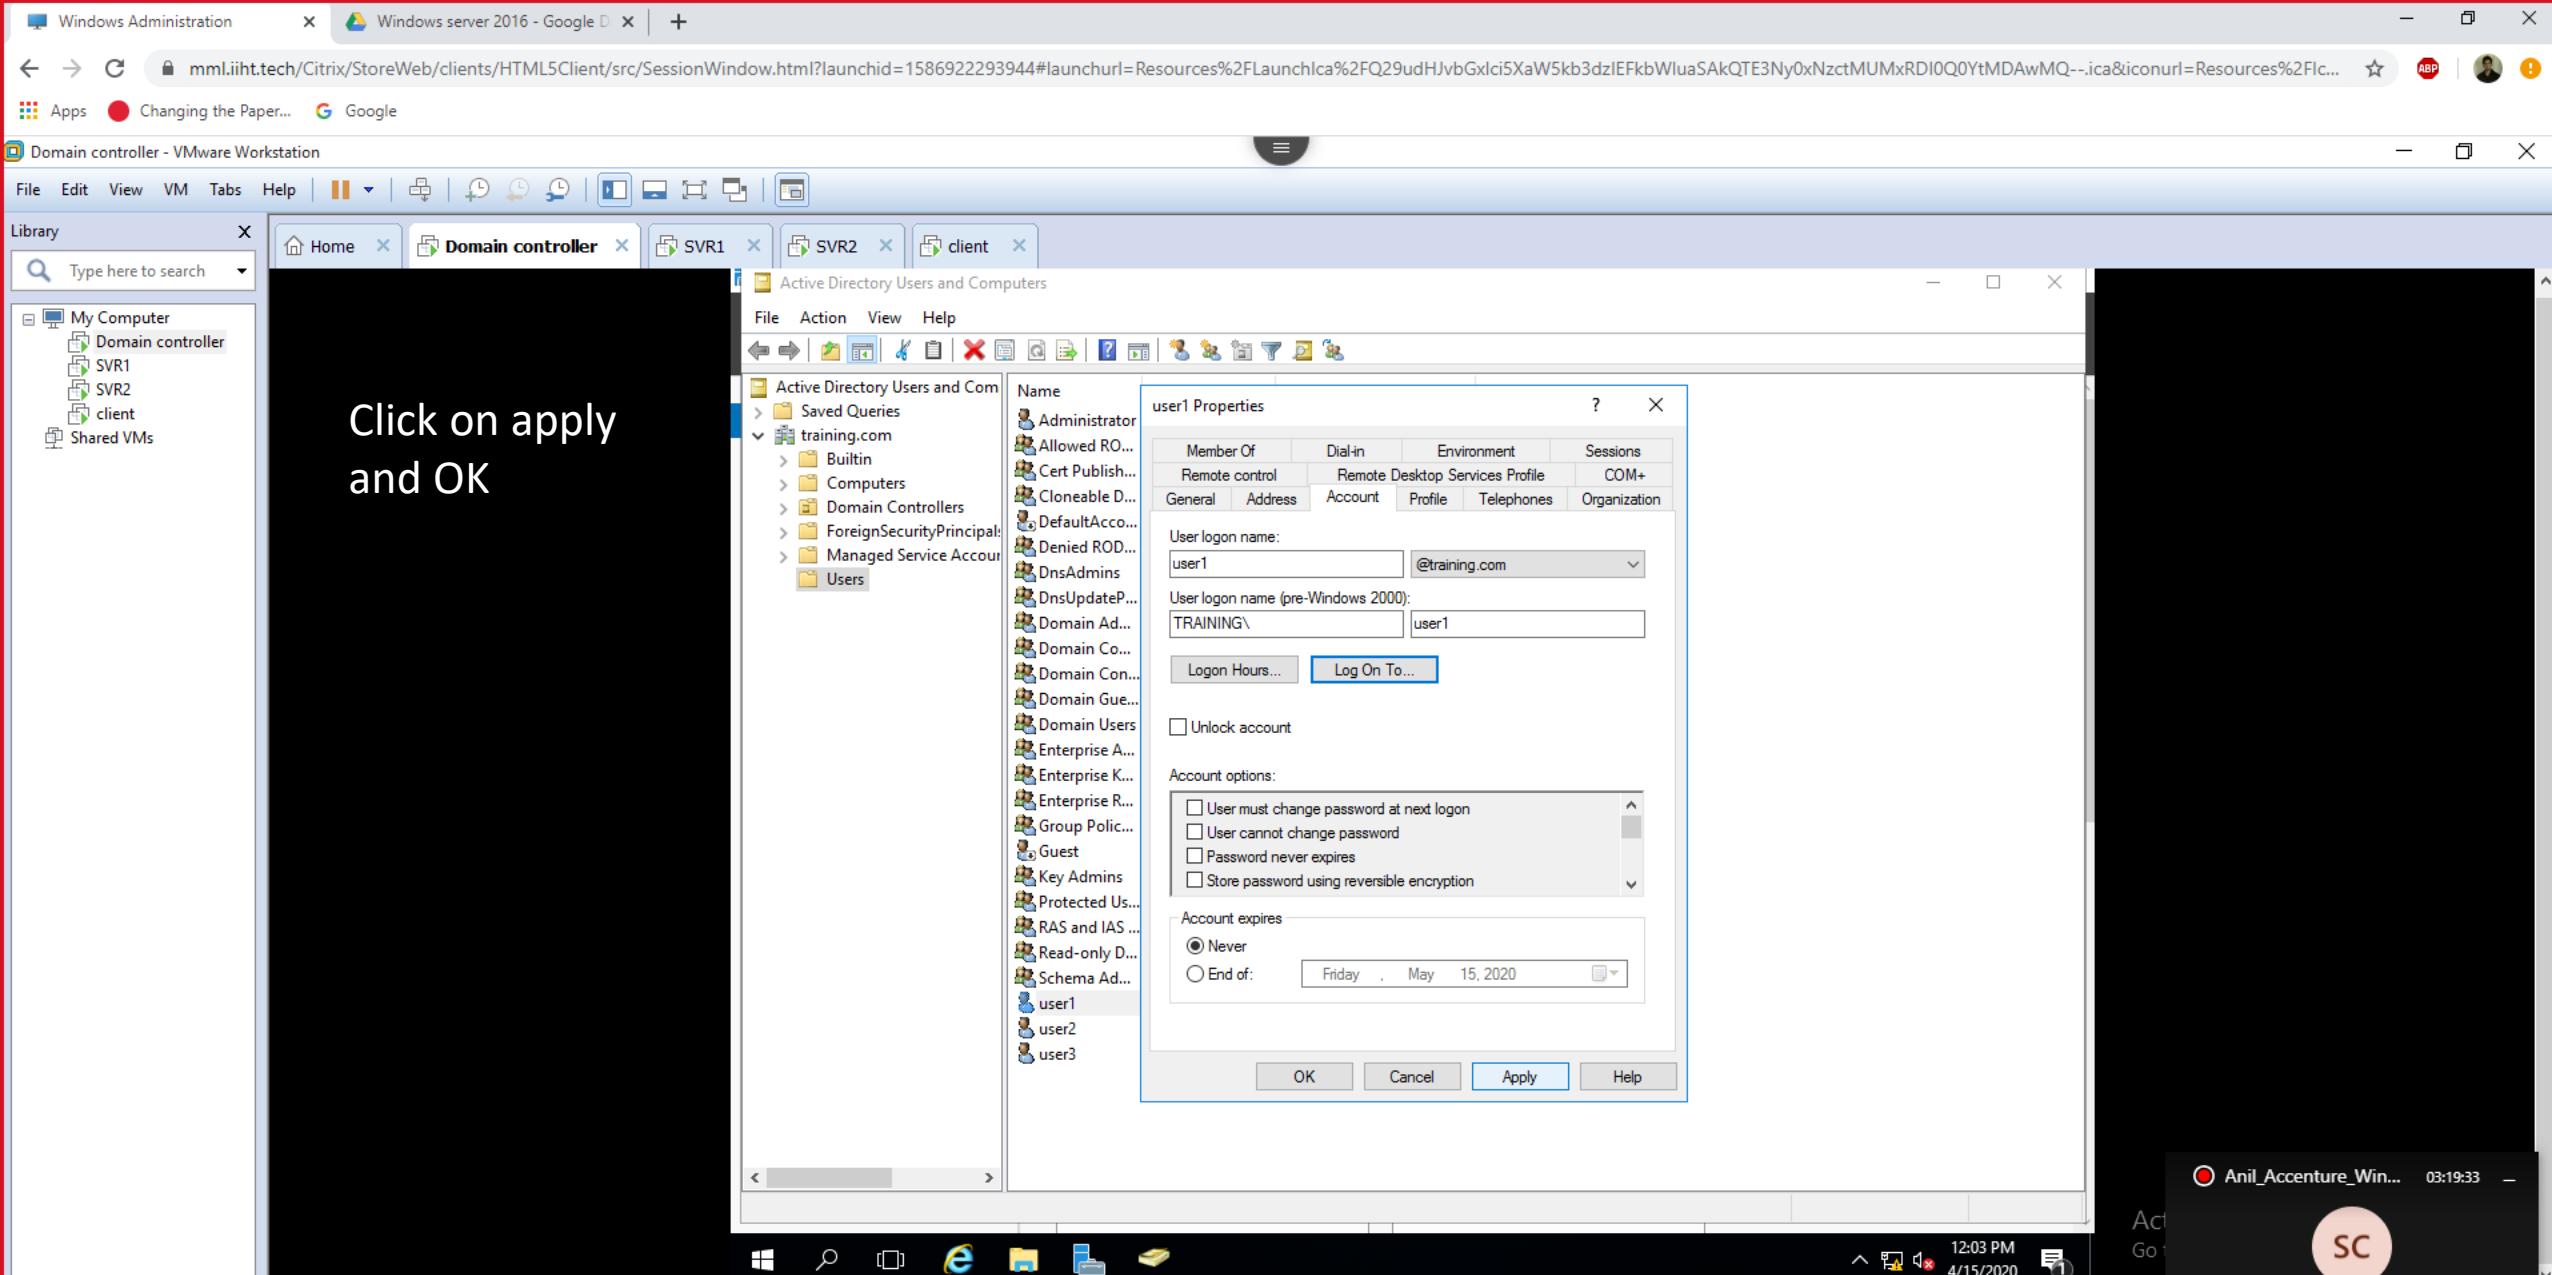

Click on Account tab and then click on Log on to

Select 'The following computers' and type the computer name on which you would like allow the user login and click add the click ok

To return to your computer, move the mouse pointer outside or press Ctrl+Alt.

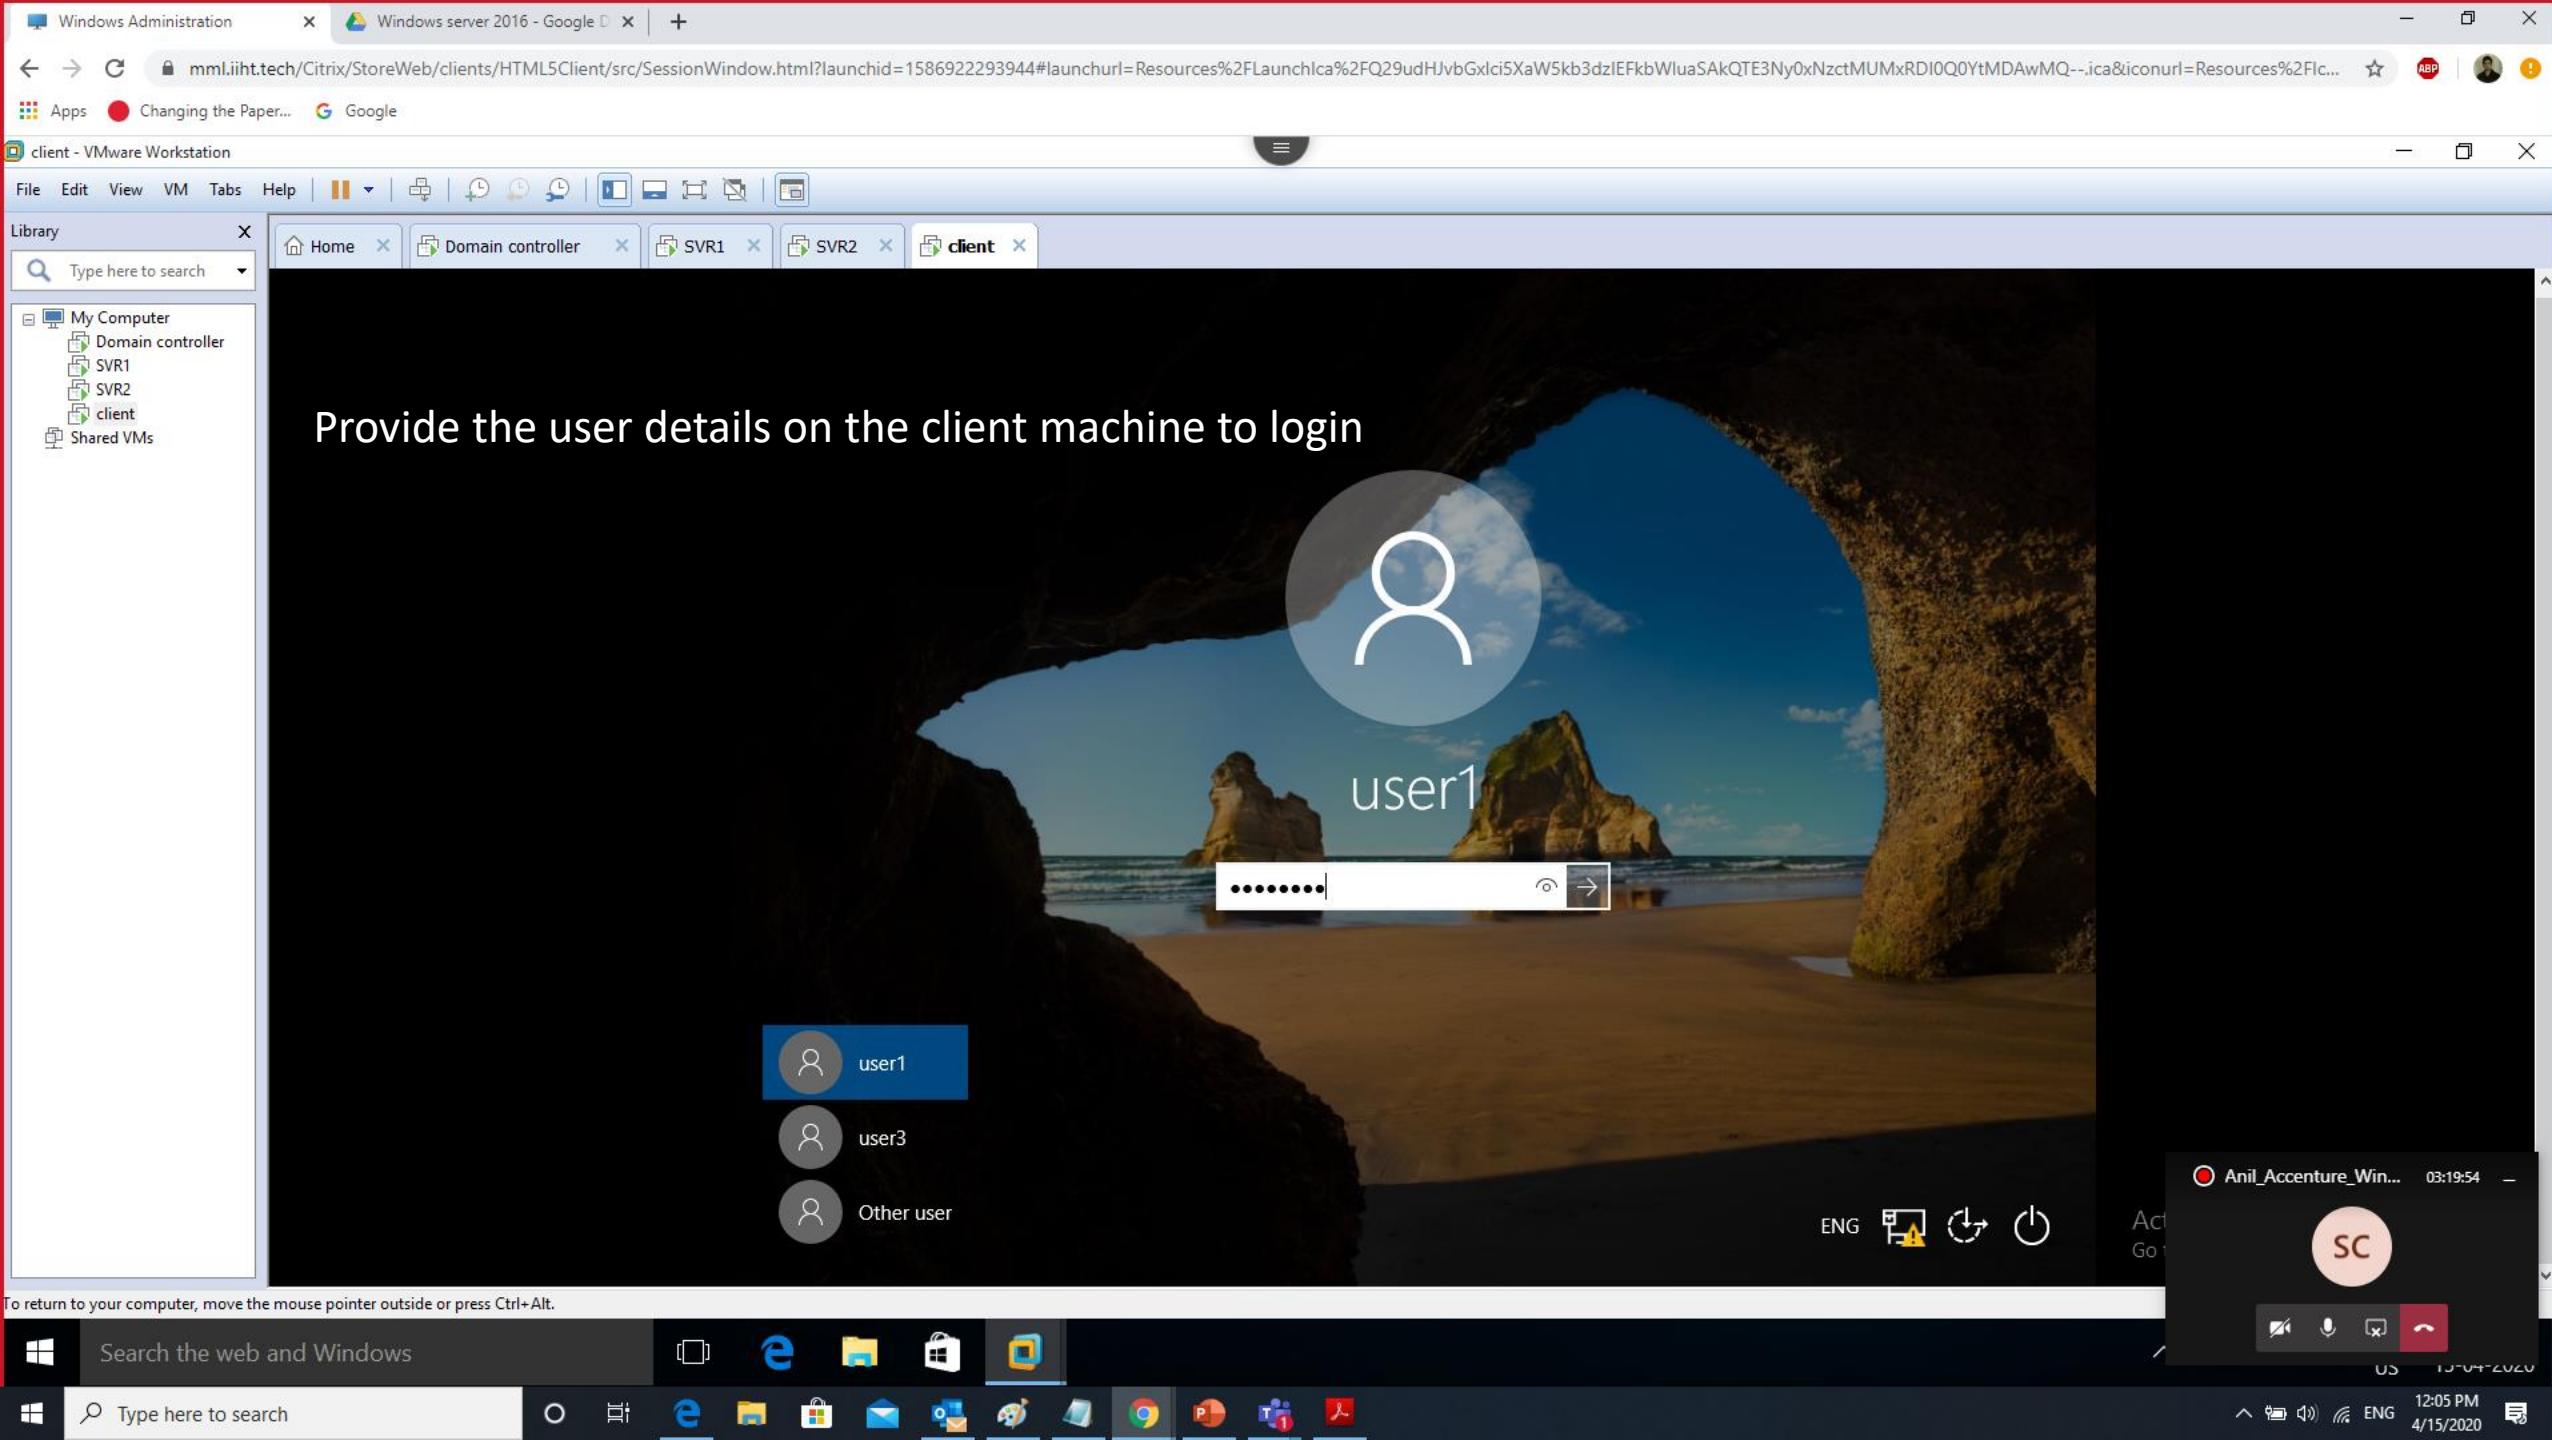

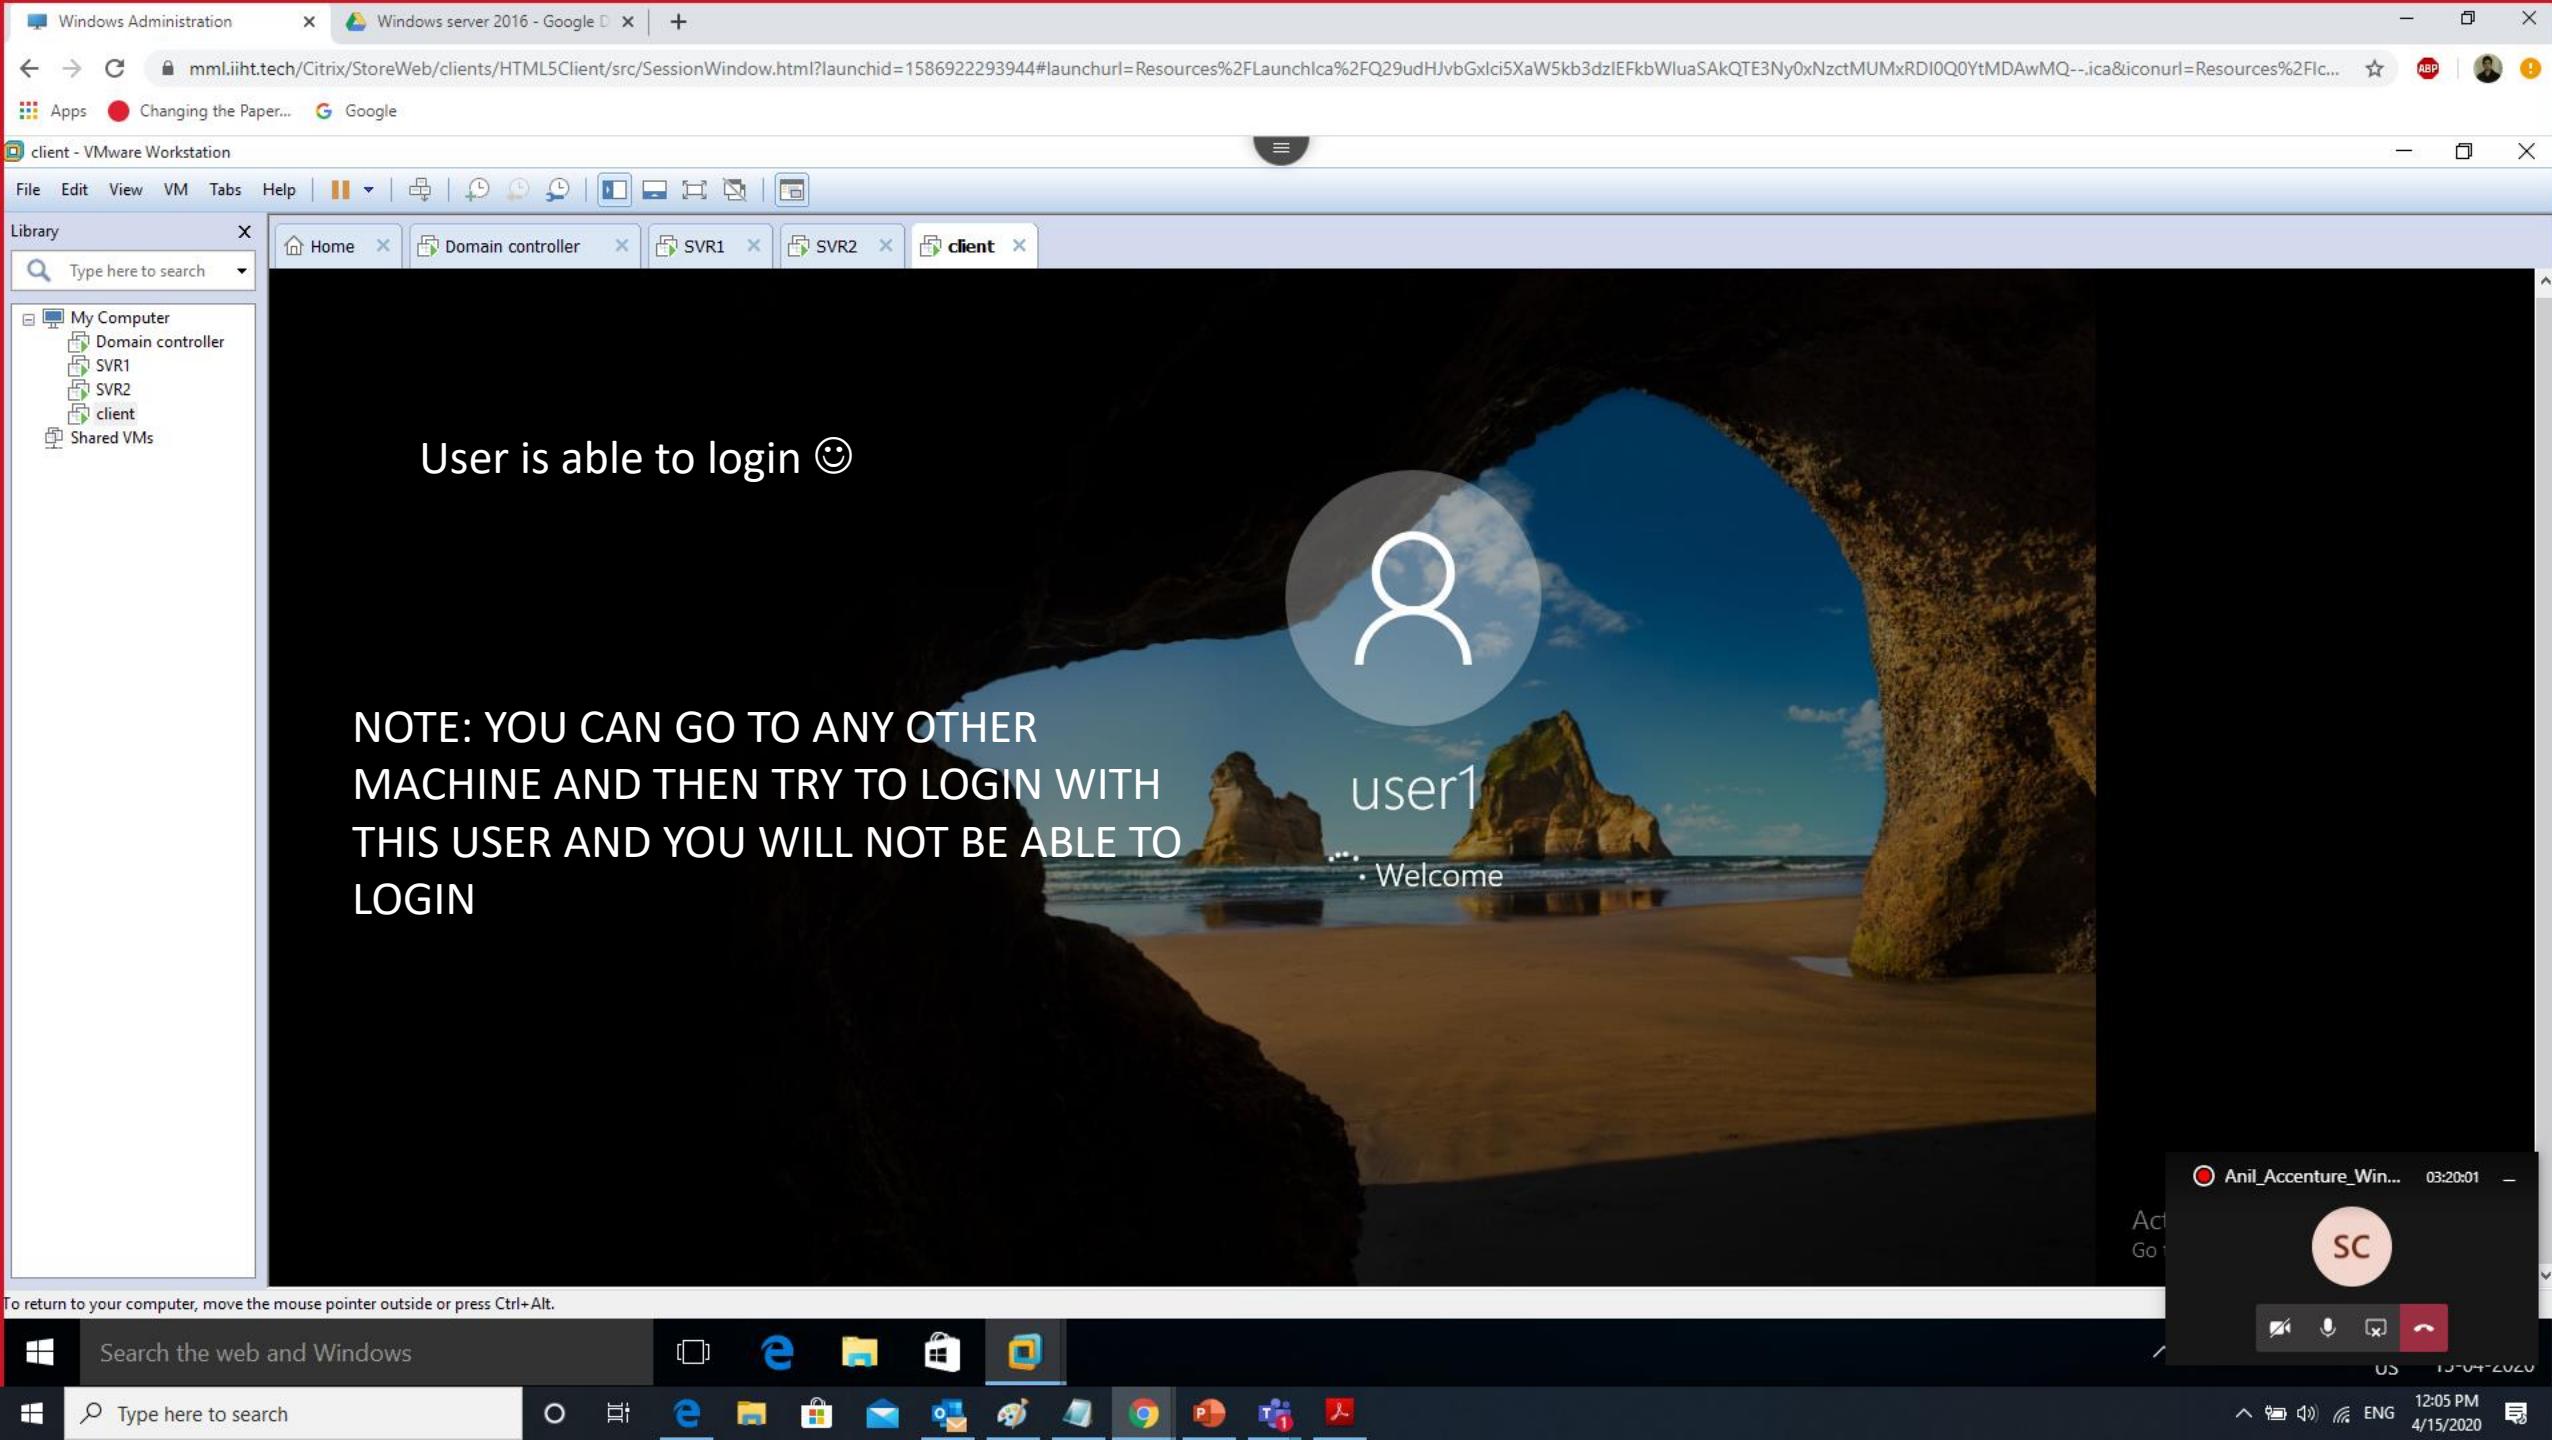

Search the web and Windows

Type here to search

12:04 PM
4/15/2020

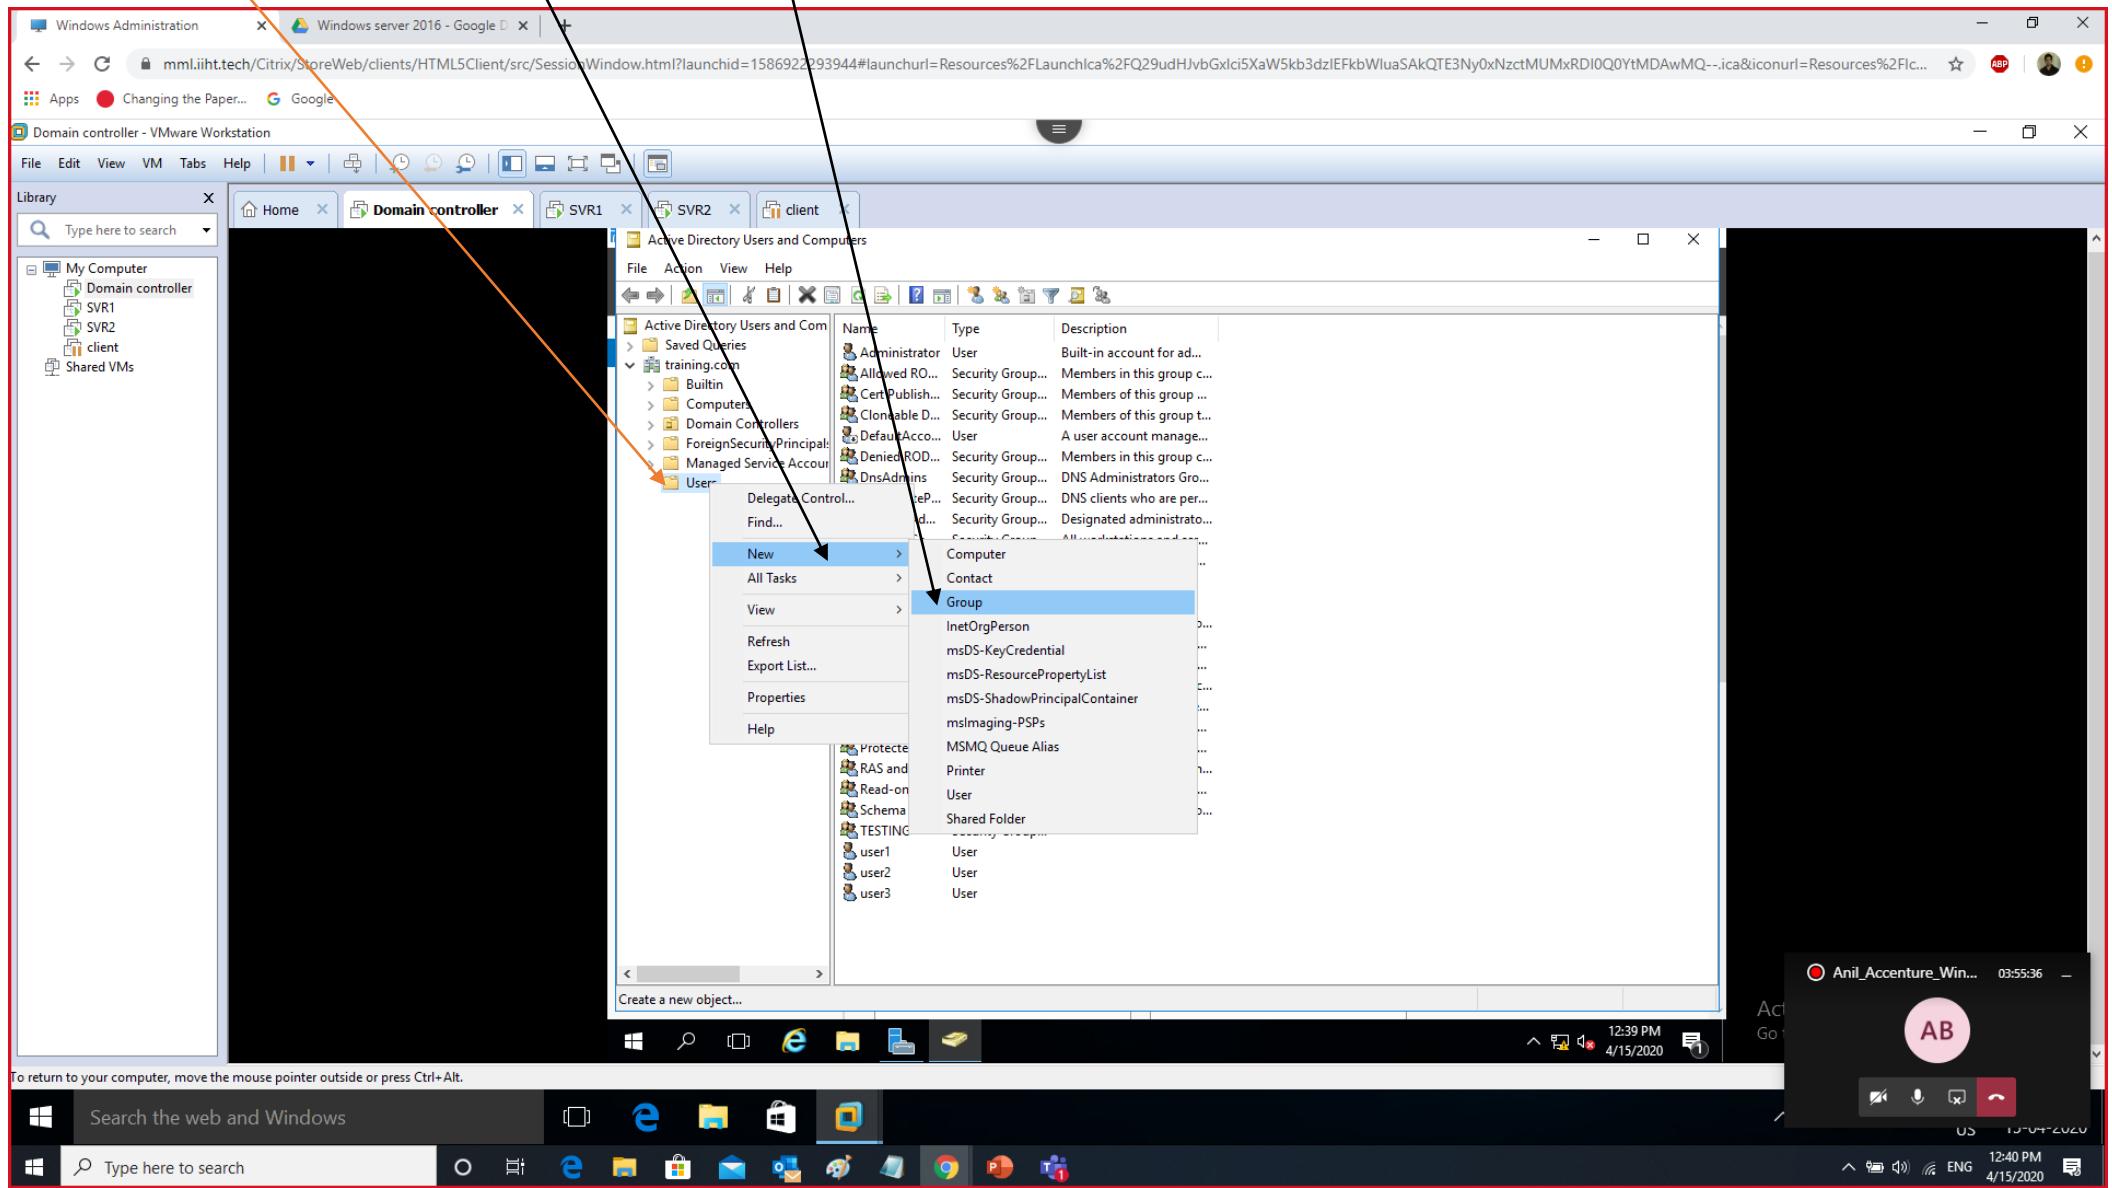

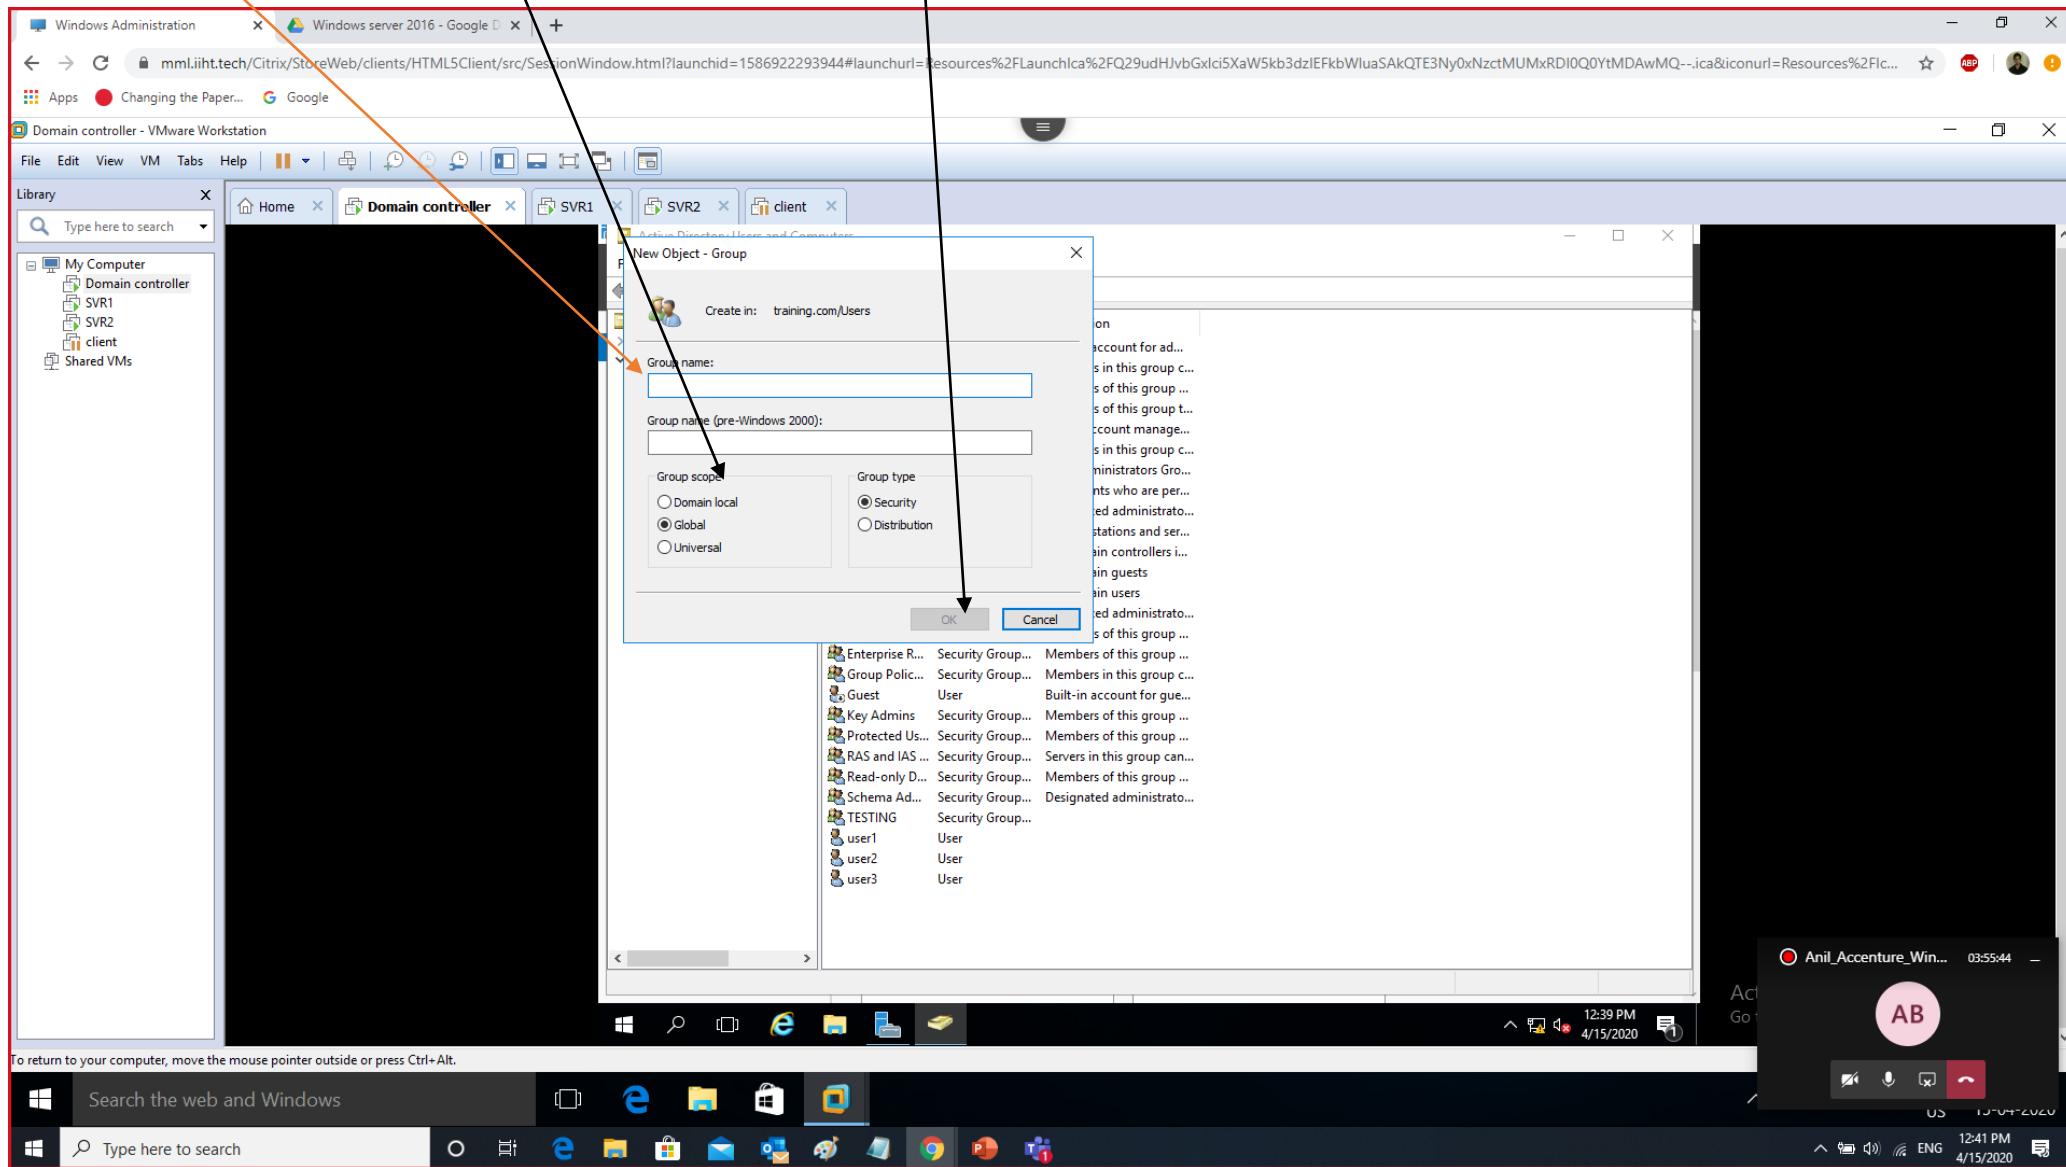

TASK 9:
Creating Group and adding user to group

NOTE: THERE ARE MULTIPLE WAYS BY WHICH A USER
CAN BE ADDED TO GROUP, IN THIS DEMONSTRATION
ONLY ONE WAY IS DISPLAYED.

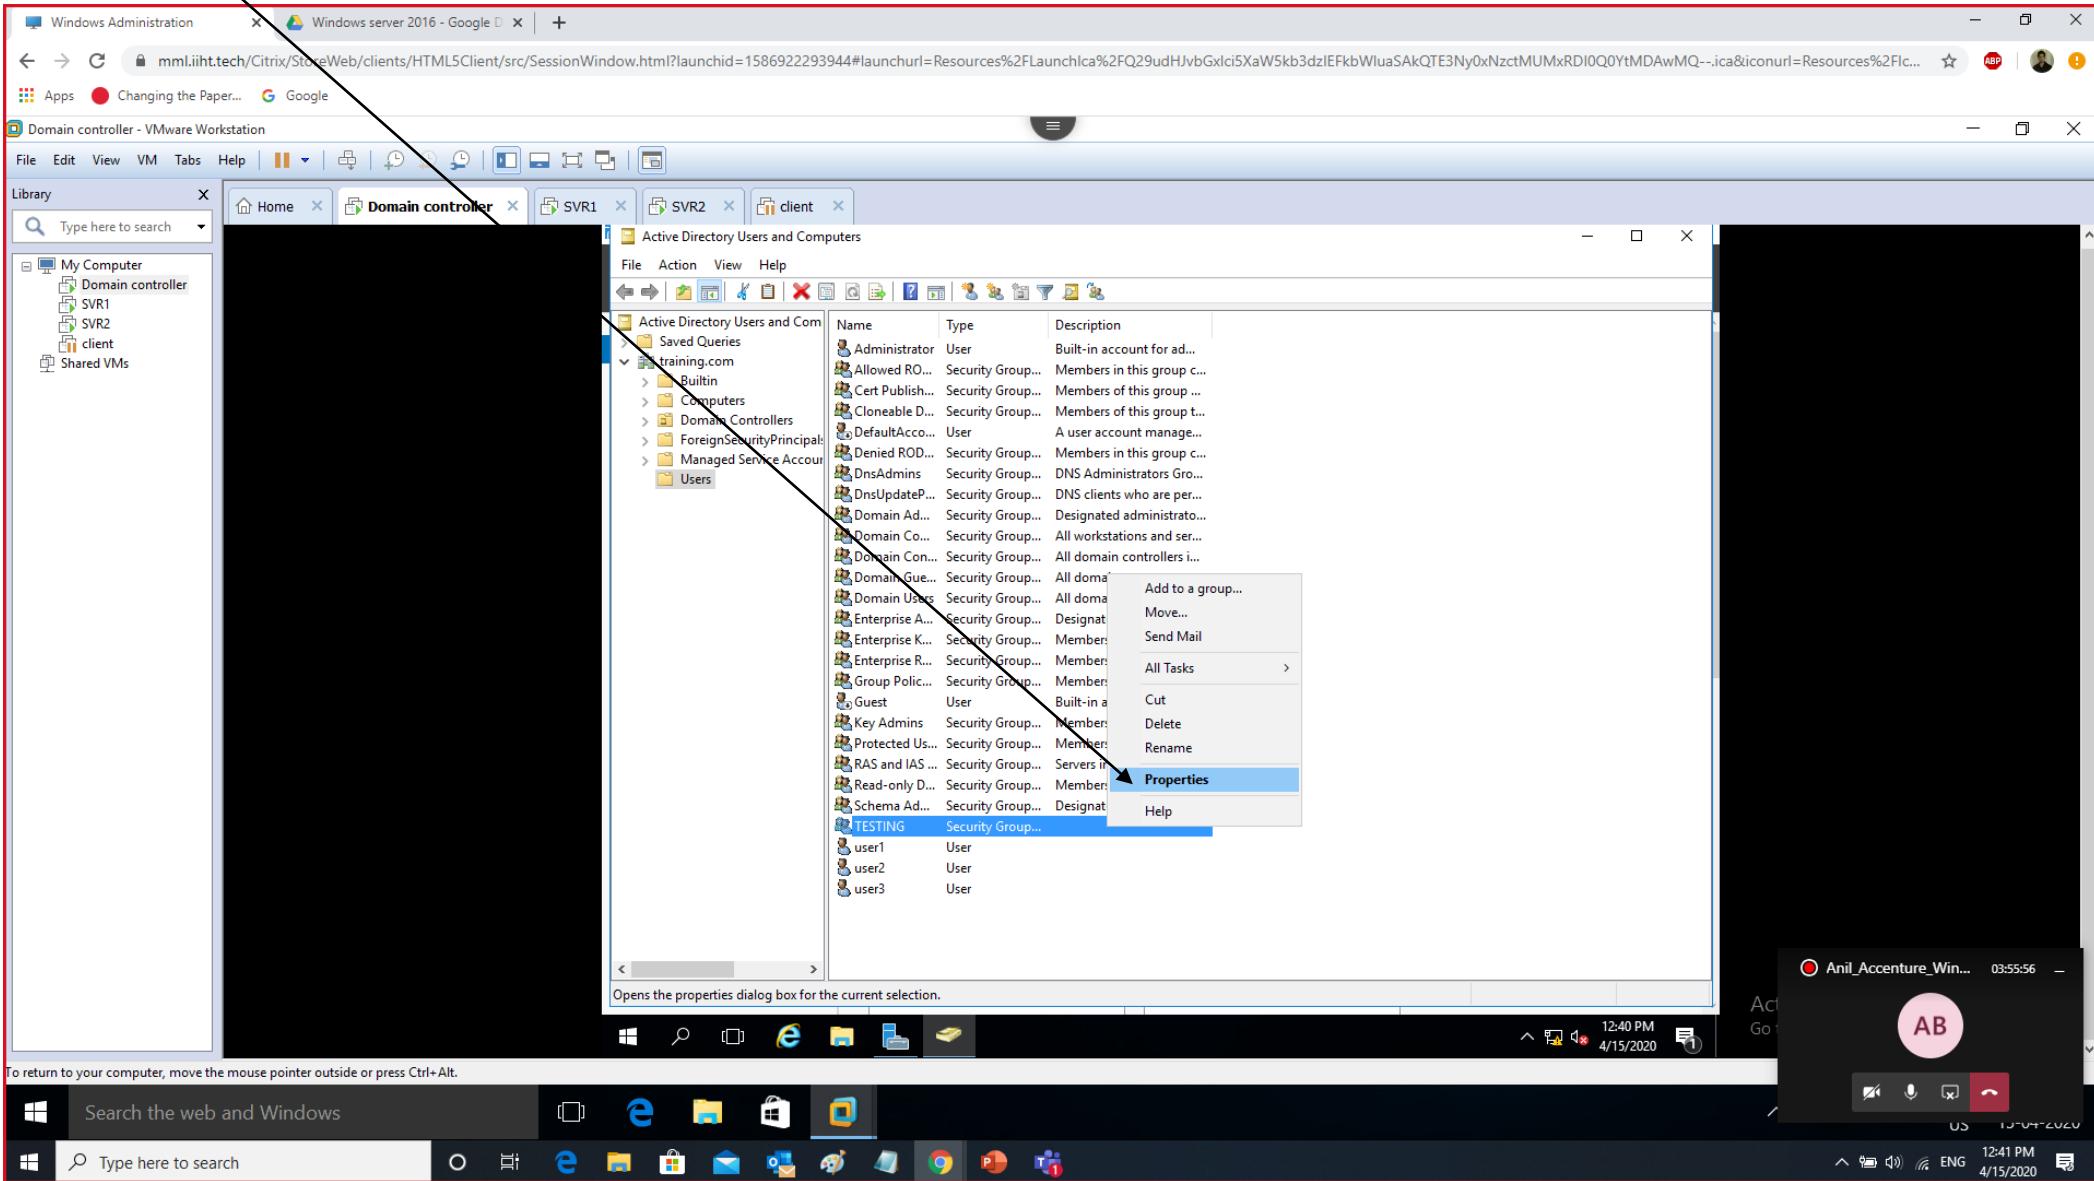

Right click on users OU , click on NEW , click Group

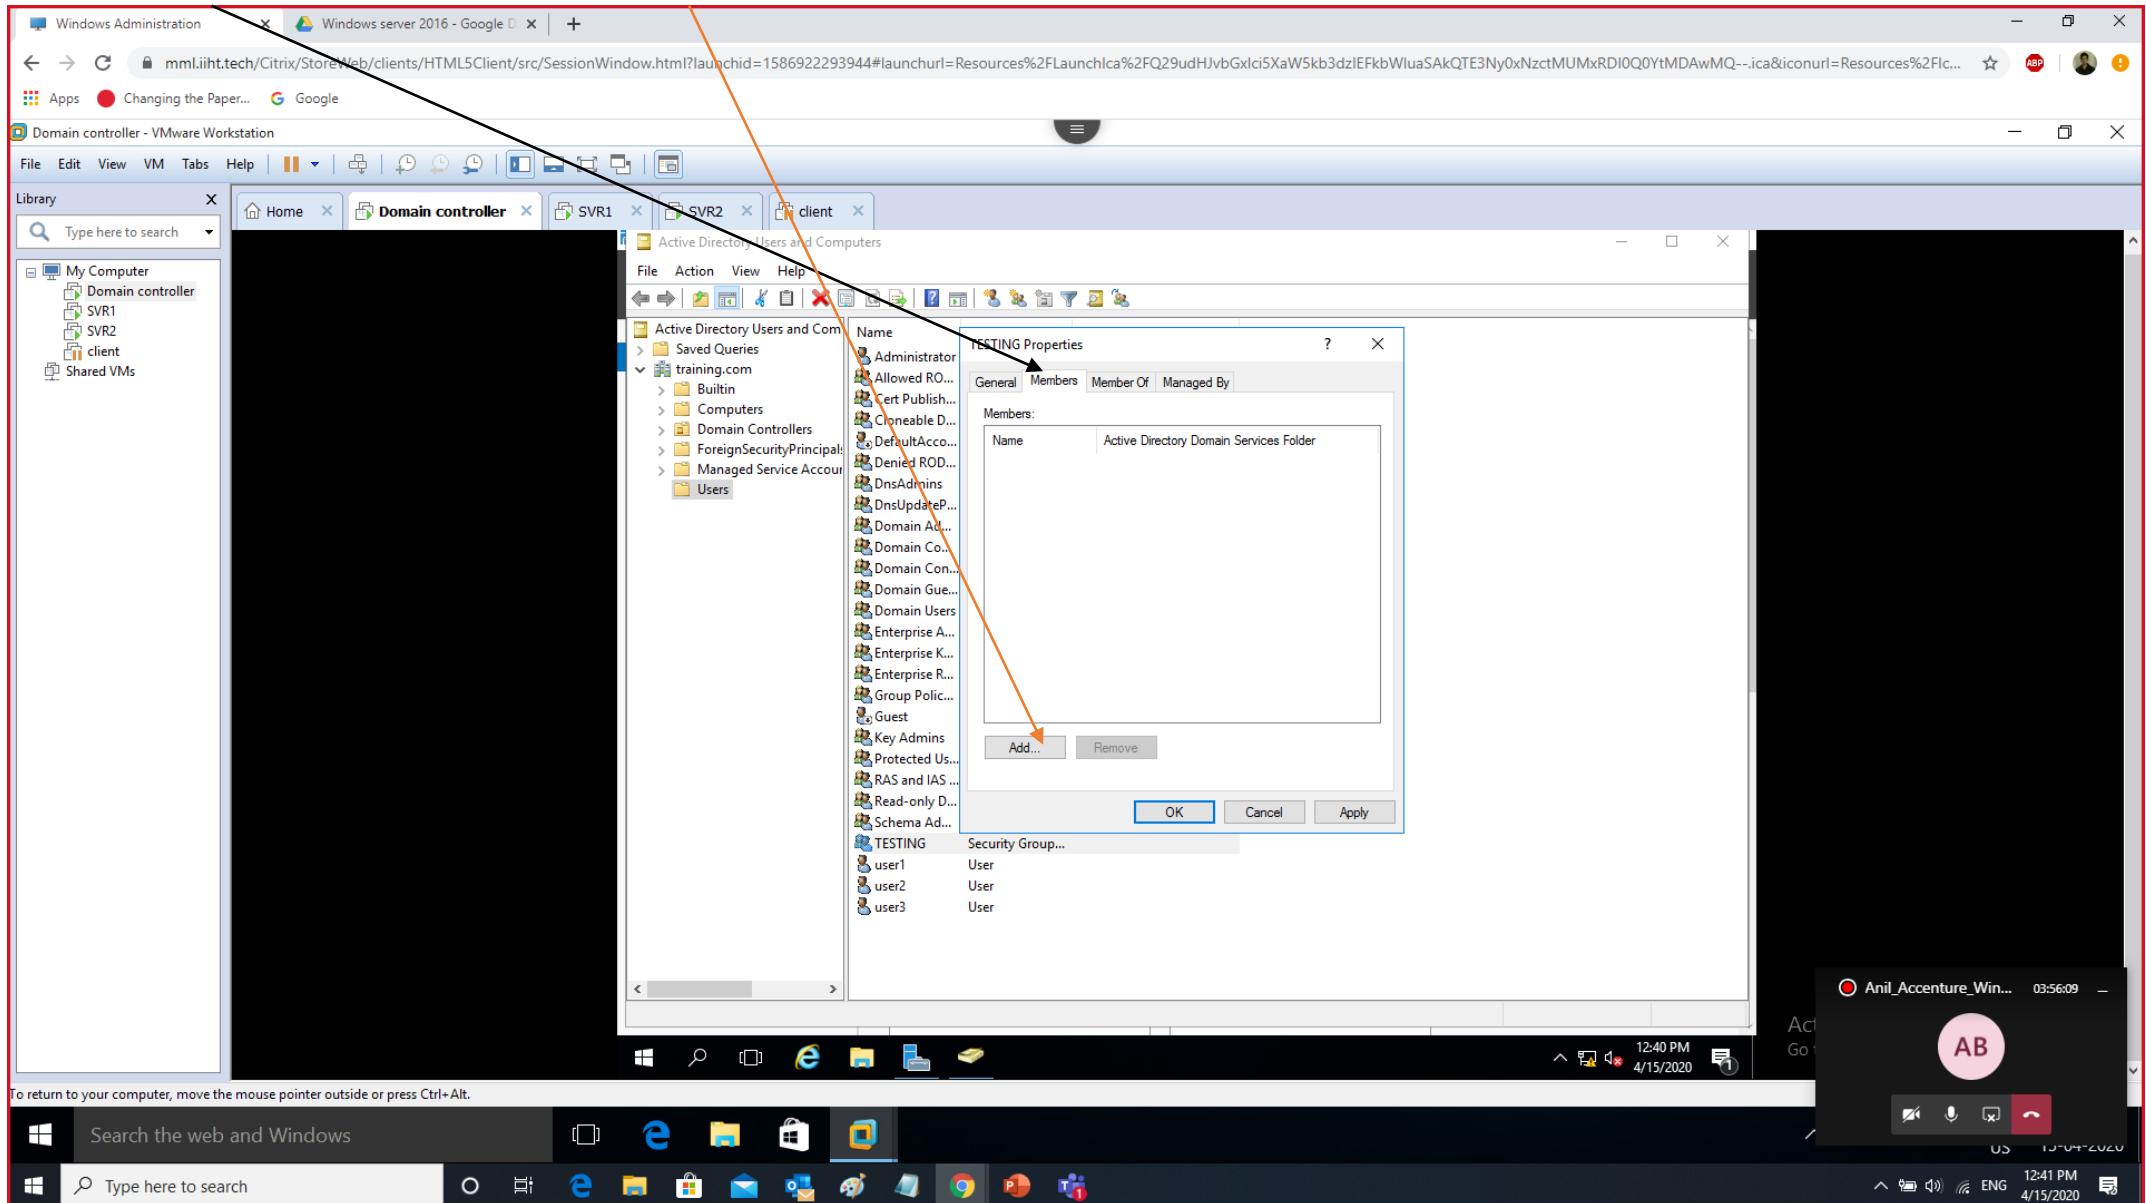

Provide the Group name , select group scope and click OK

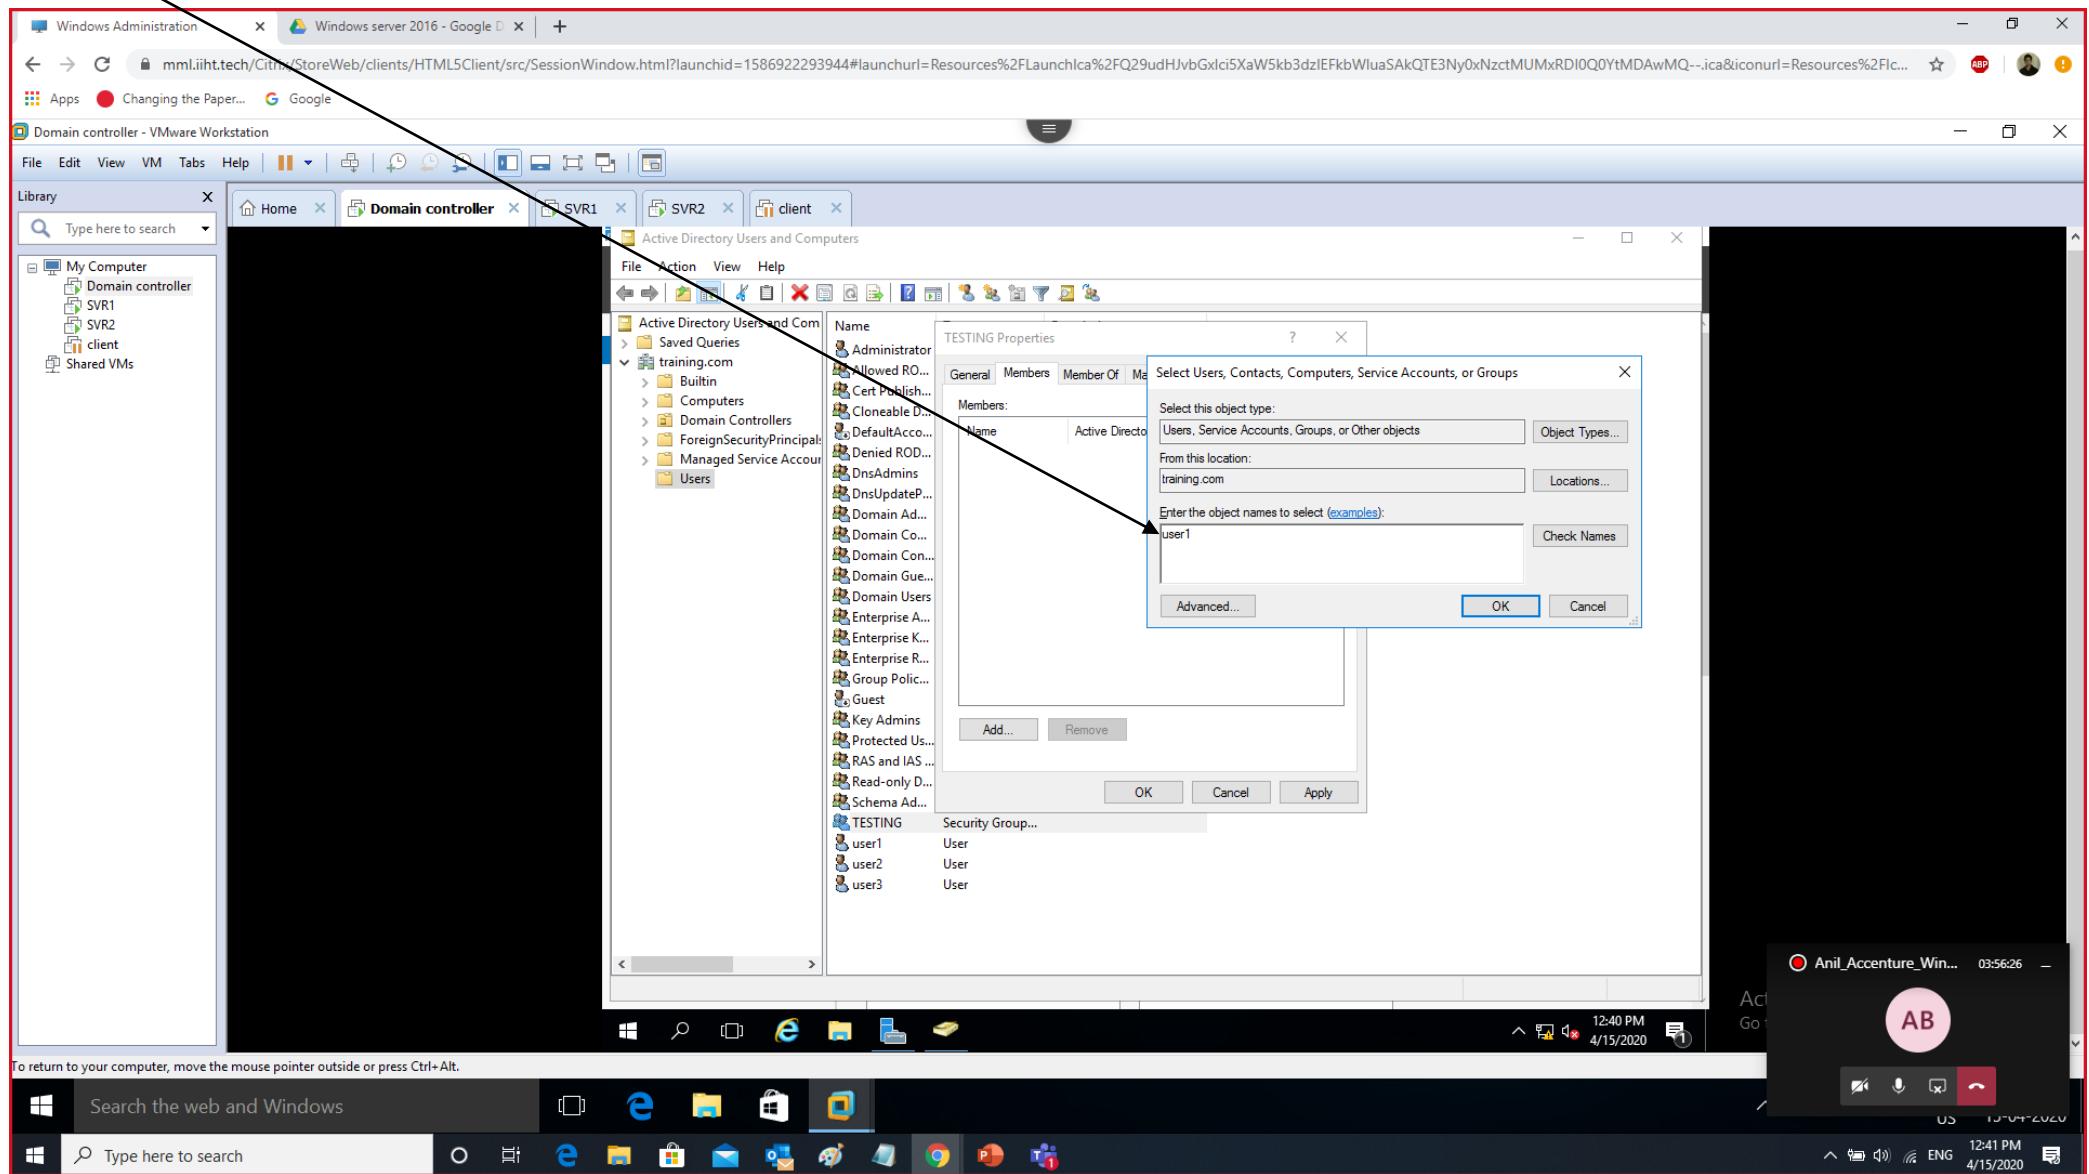

Go to group properties

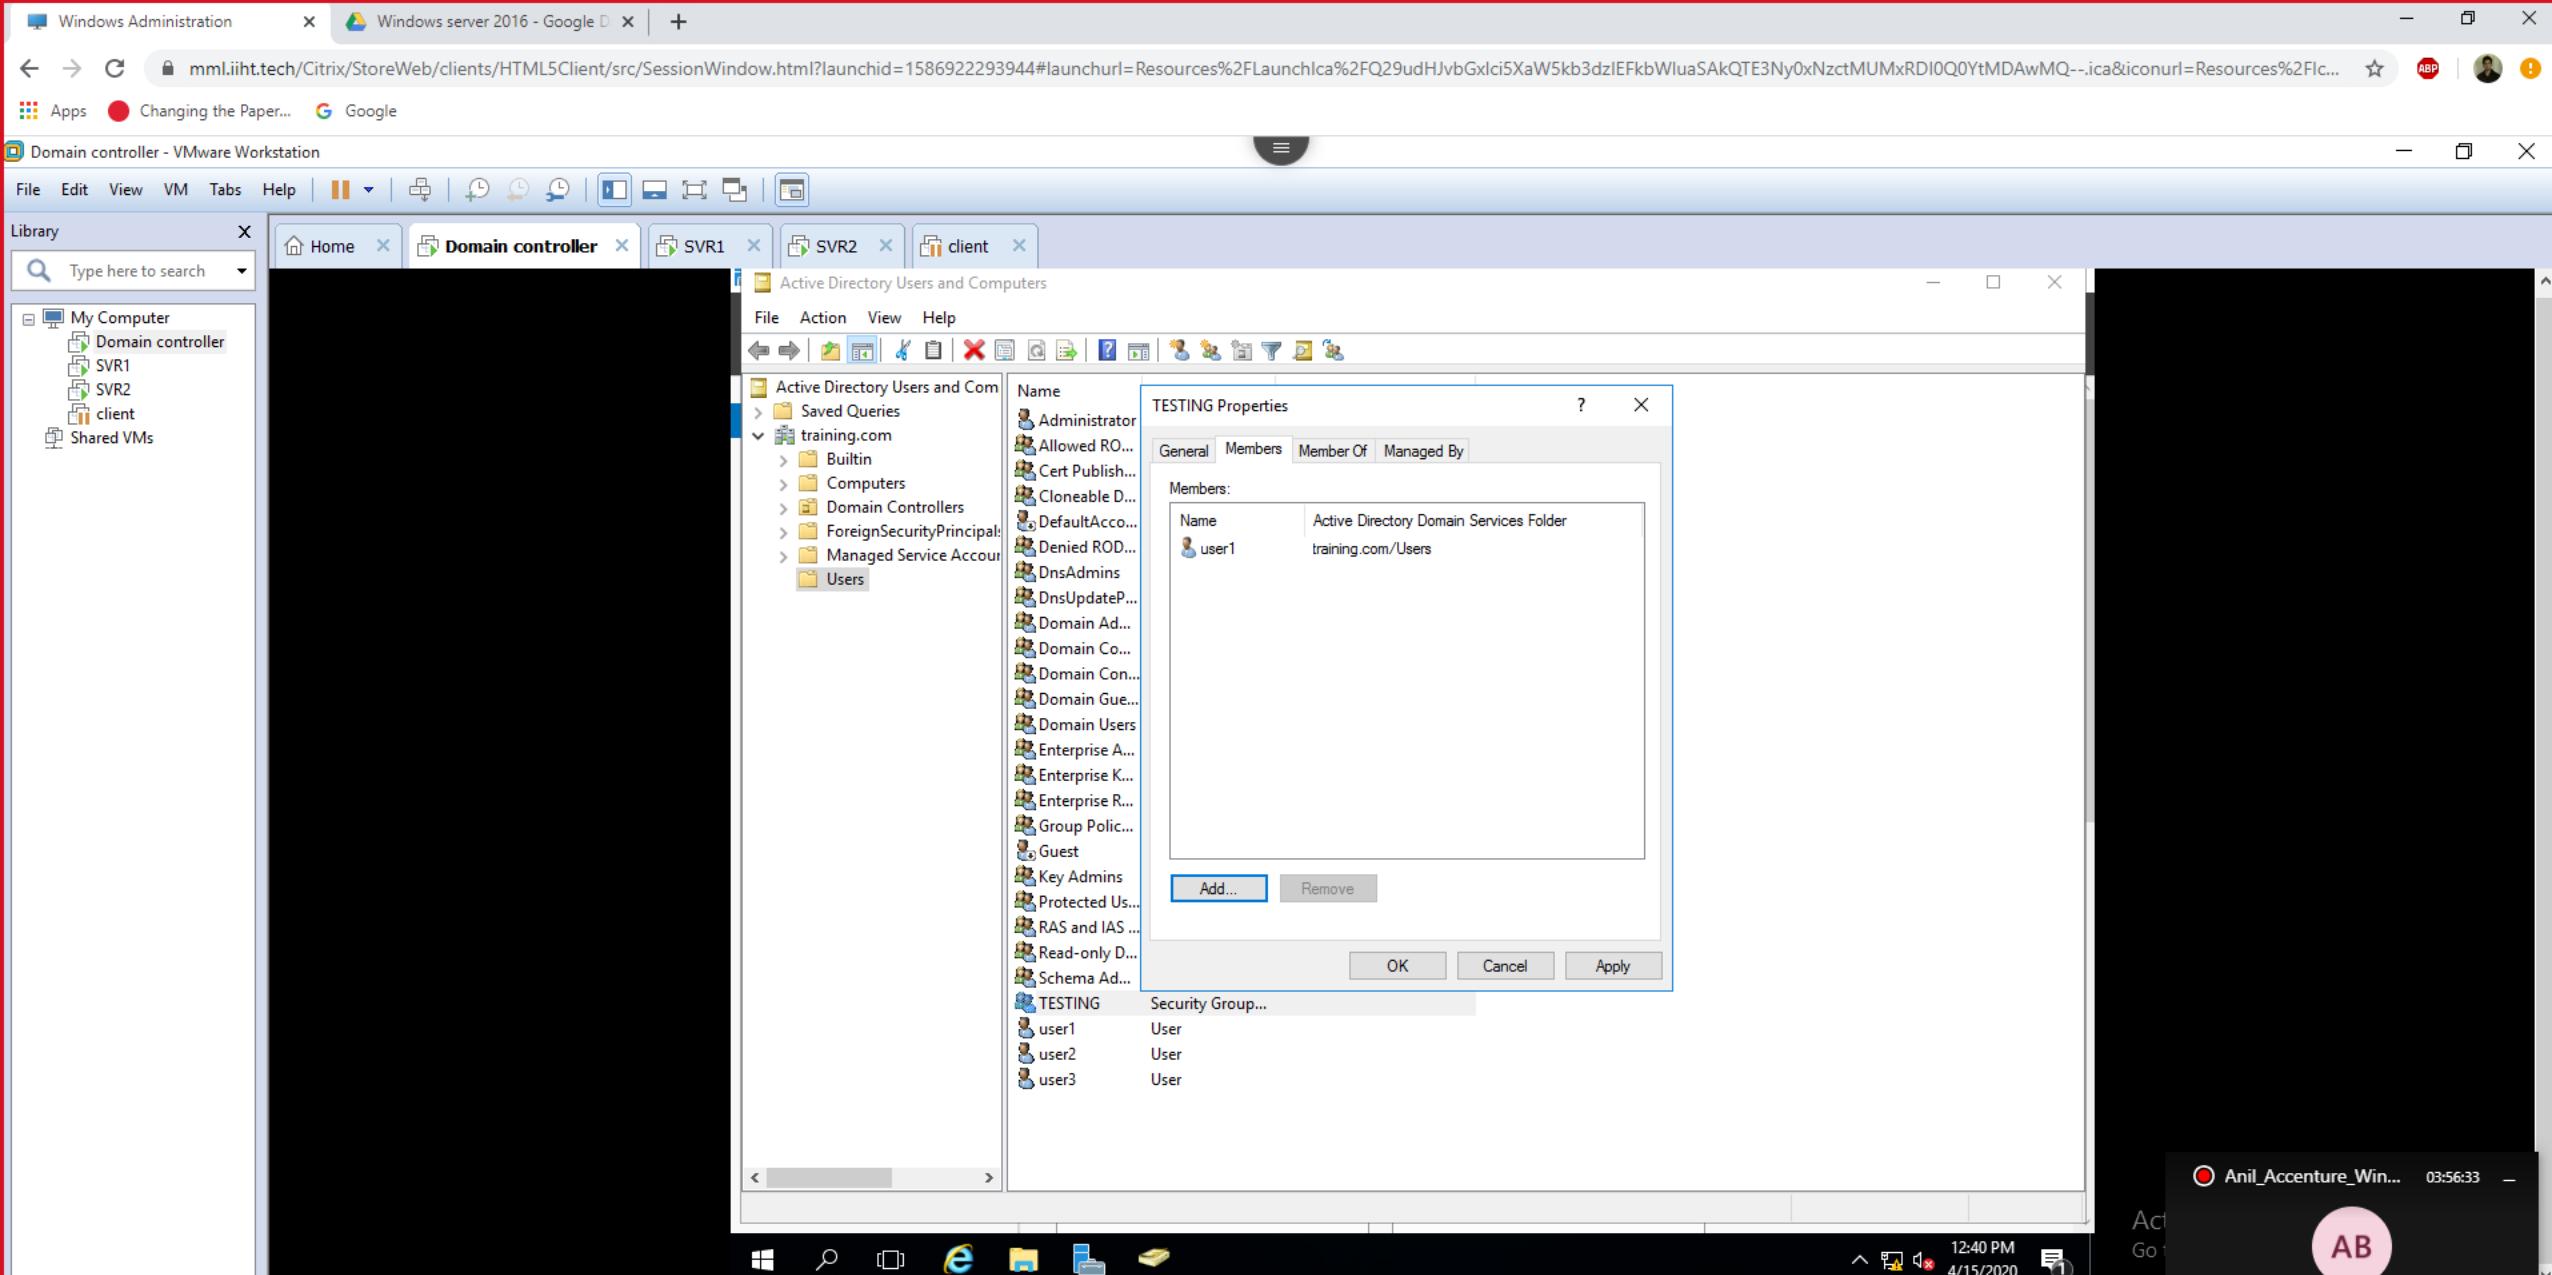

Click on Members Tab and then click on Add

Type the user name that you would like to add to this group and click on OK

To return to your computer, move the mouse pointer outside or press Ctrl+Alt.

Search the web and Windows

The screenshot shows a VMware Workstation interface with multiple tabs open. The active tab is 'Domain controller' in the Server Manager. The window displays the 'Add Roles and Features Wizard' for the 'Select server roles' step. The 'Server Roles' section is selected in the navigation pane. The 'Description' pane for the 'DHCP Server' role states: 'Dynamic Host Configuration Protocol (DHCP) Server enables you to centrally configure, manage, and provide temporary IP addresses and related information for client computers.' The 'DHCP Server' checkbox is checked. Other available roles listed include Active Directory Certificate Services, Active Directory Federation Services, Active Directory Lightweight Directory Services, Active Directory Rights Management Services, Device Health Attestation, DNS Server, Fax Server, File and Storage Services, Hyper-V, MultiPoint Services, Network Controller, Network Policy and Access Services, Print and Document Services, Remote Access, Remote Desktop Services, Volume Activation Services, and Web Server (IIS). The bottom of the wizard shows buttons for '< Previous', 'Next >', 'Install', and 'Cancel'. The status bar at the bottom indicates 'BPA results'.

Now lets convert the site to https from http.

NOTE: we are converting it to https because http is not secure.

ALSO NOTE THAT ANY SITE THAT HAS TO BE HOSTED WITH HTTPS ,
IT REQUIRES AN SSL CERTIFICATE. WITHOUT HTTPS CERTIFICATE, AN
HTTPS SITE CAN NOT BE HOSTED.

To return to your computer, move the mouse pointer outside or press Ctrl+Alt.

Now our site is accessible using both http and https.

We need to allow access only using https.

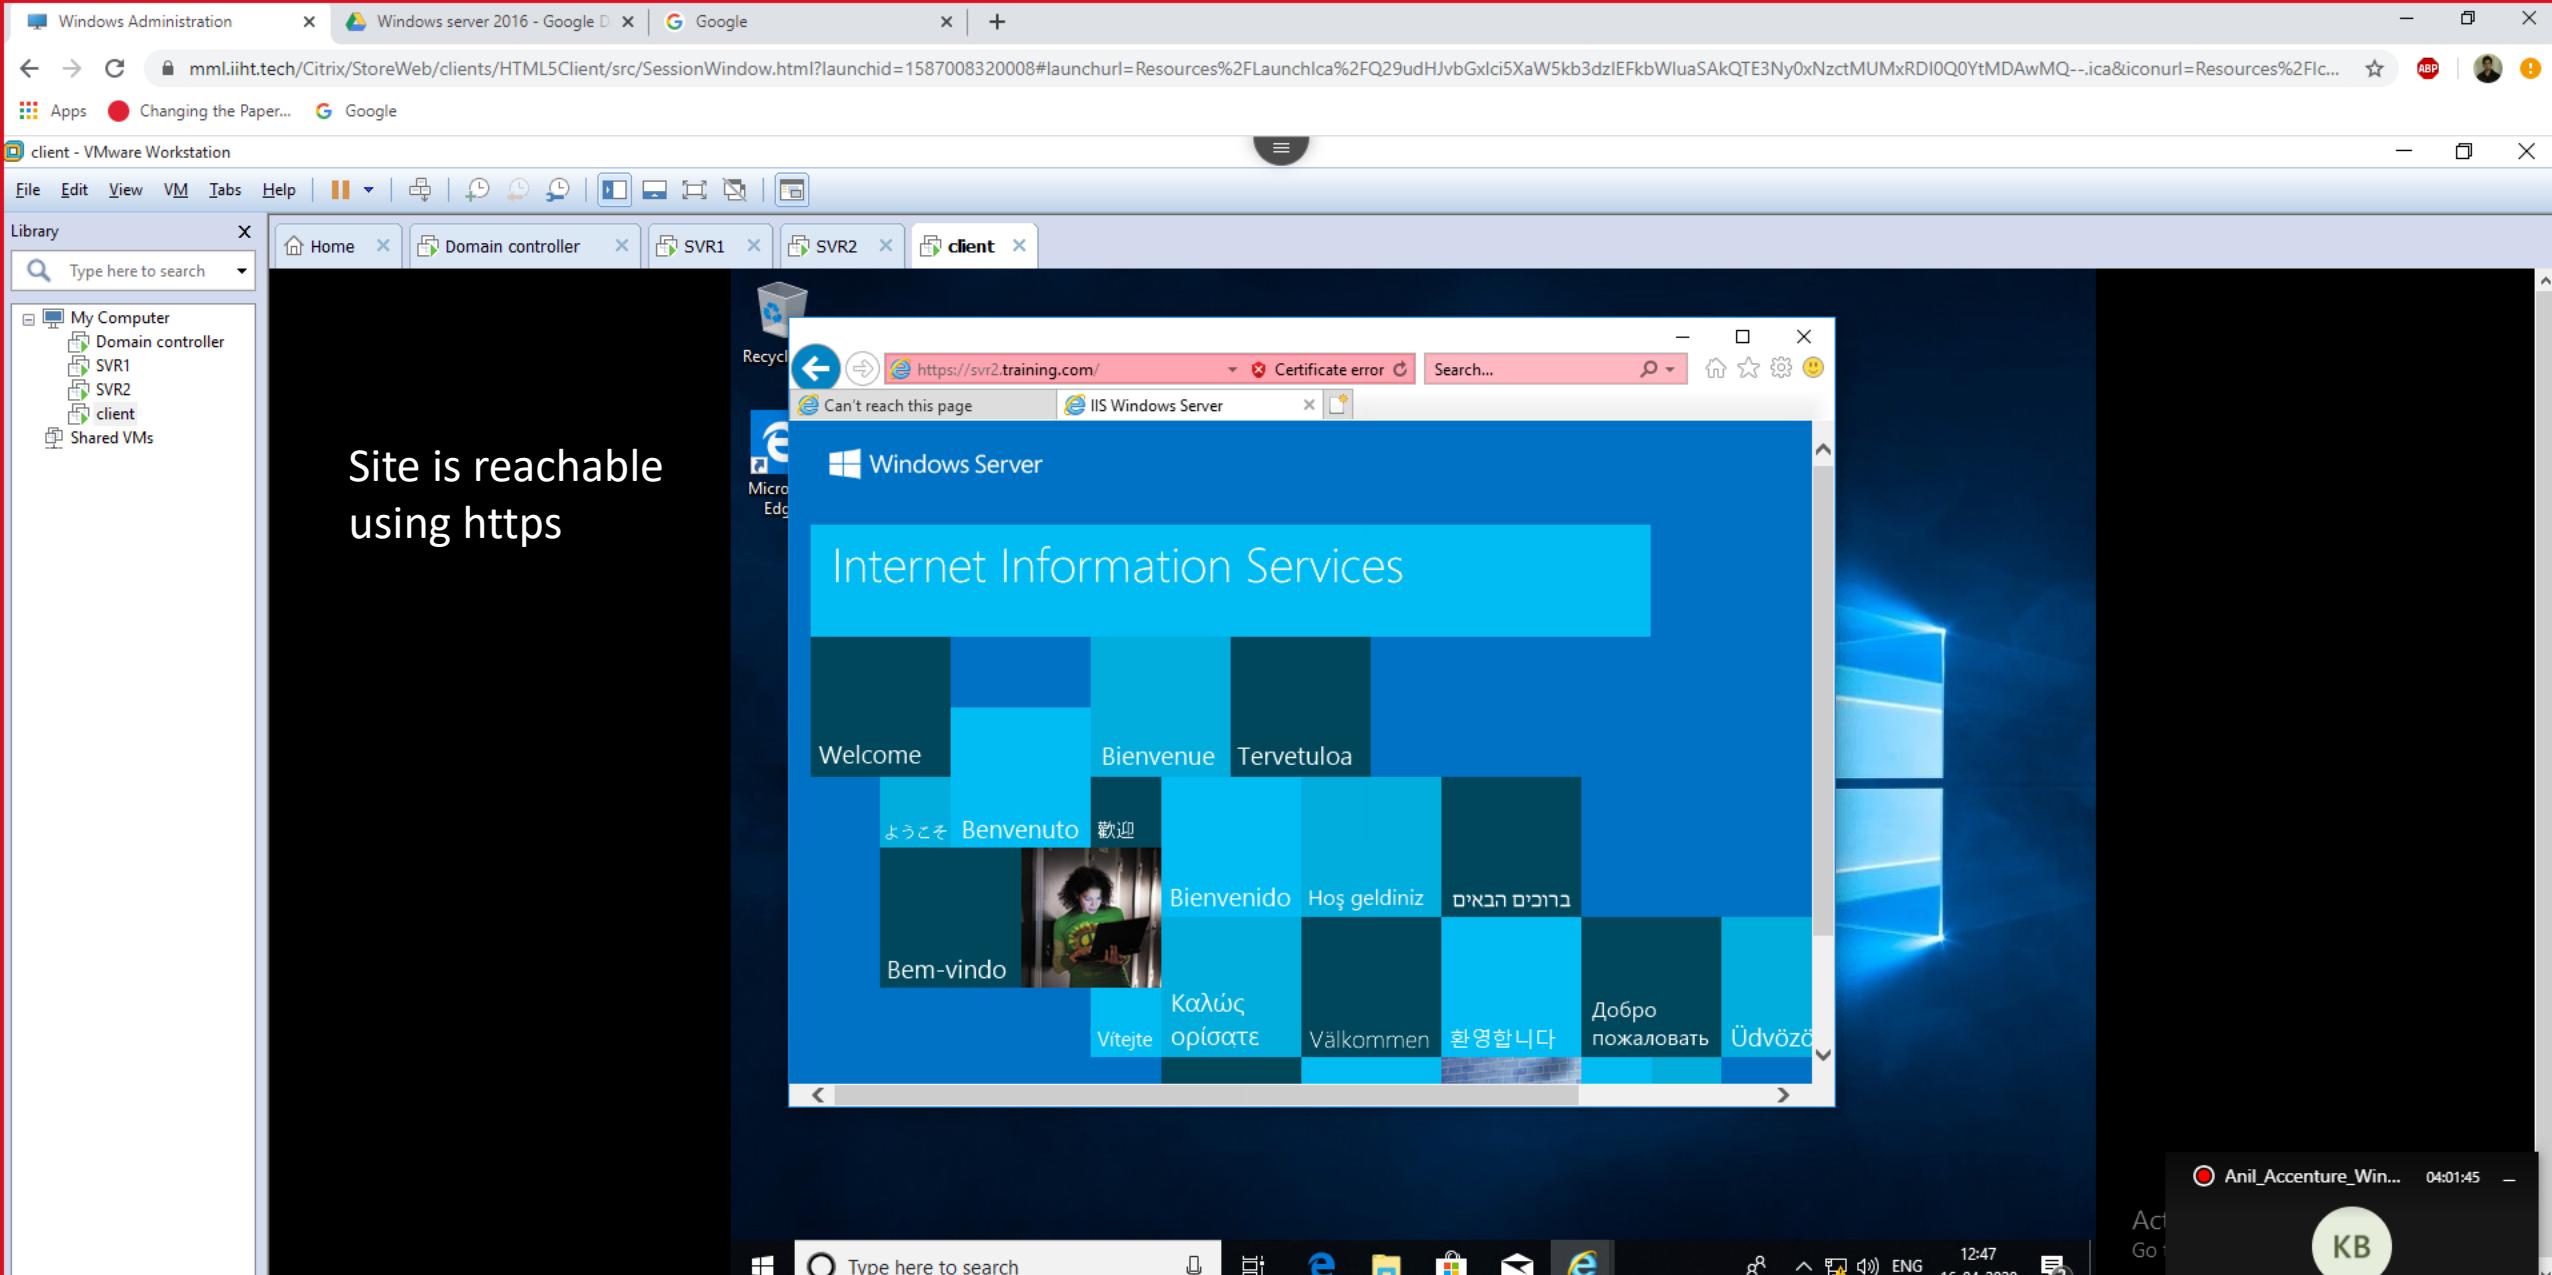

LETS DO IT

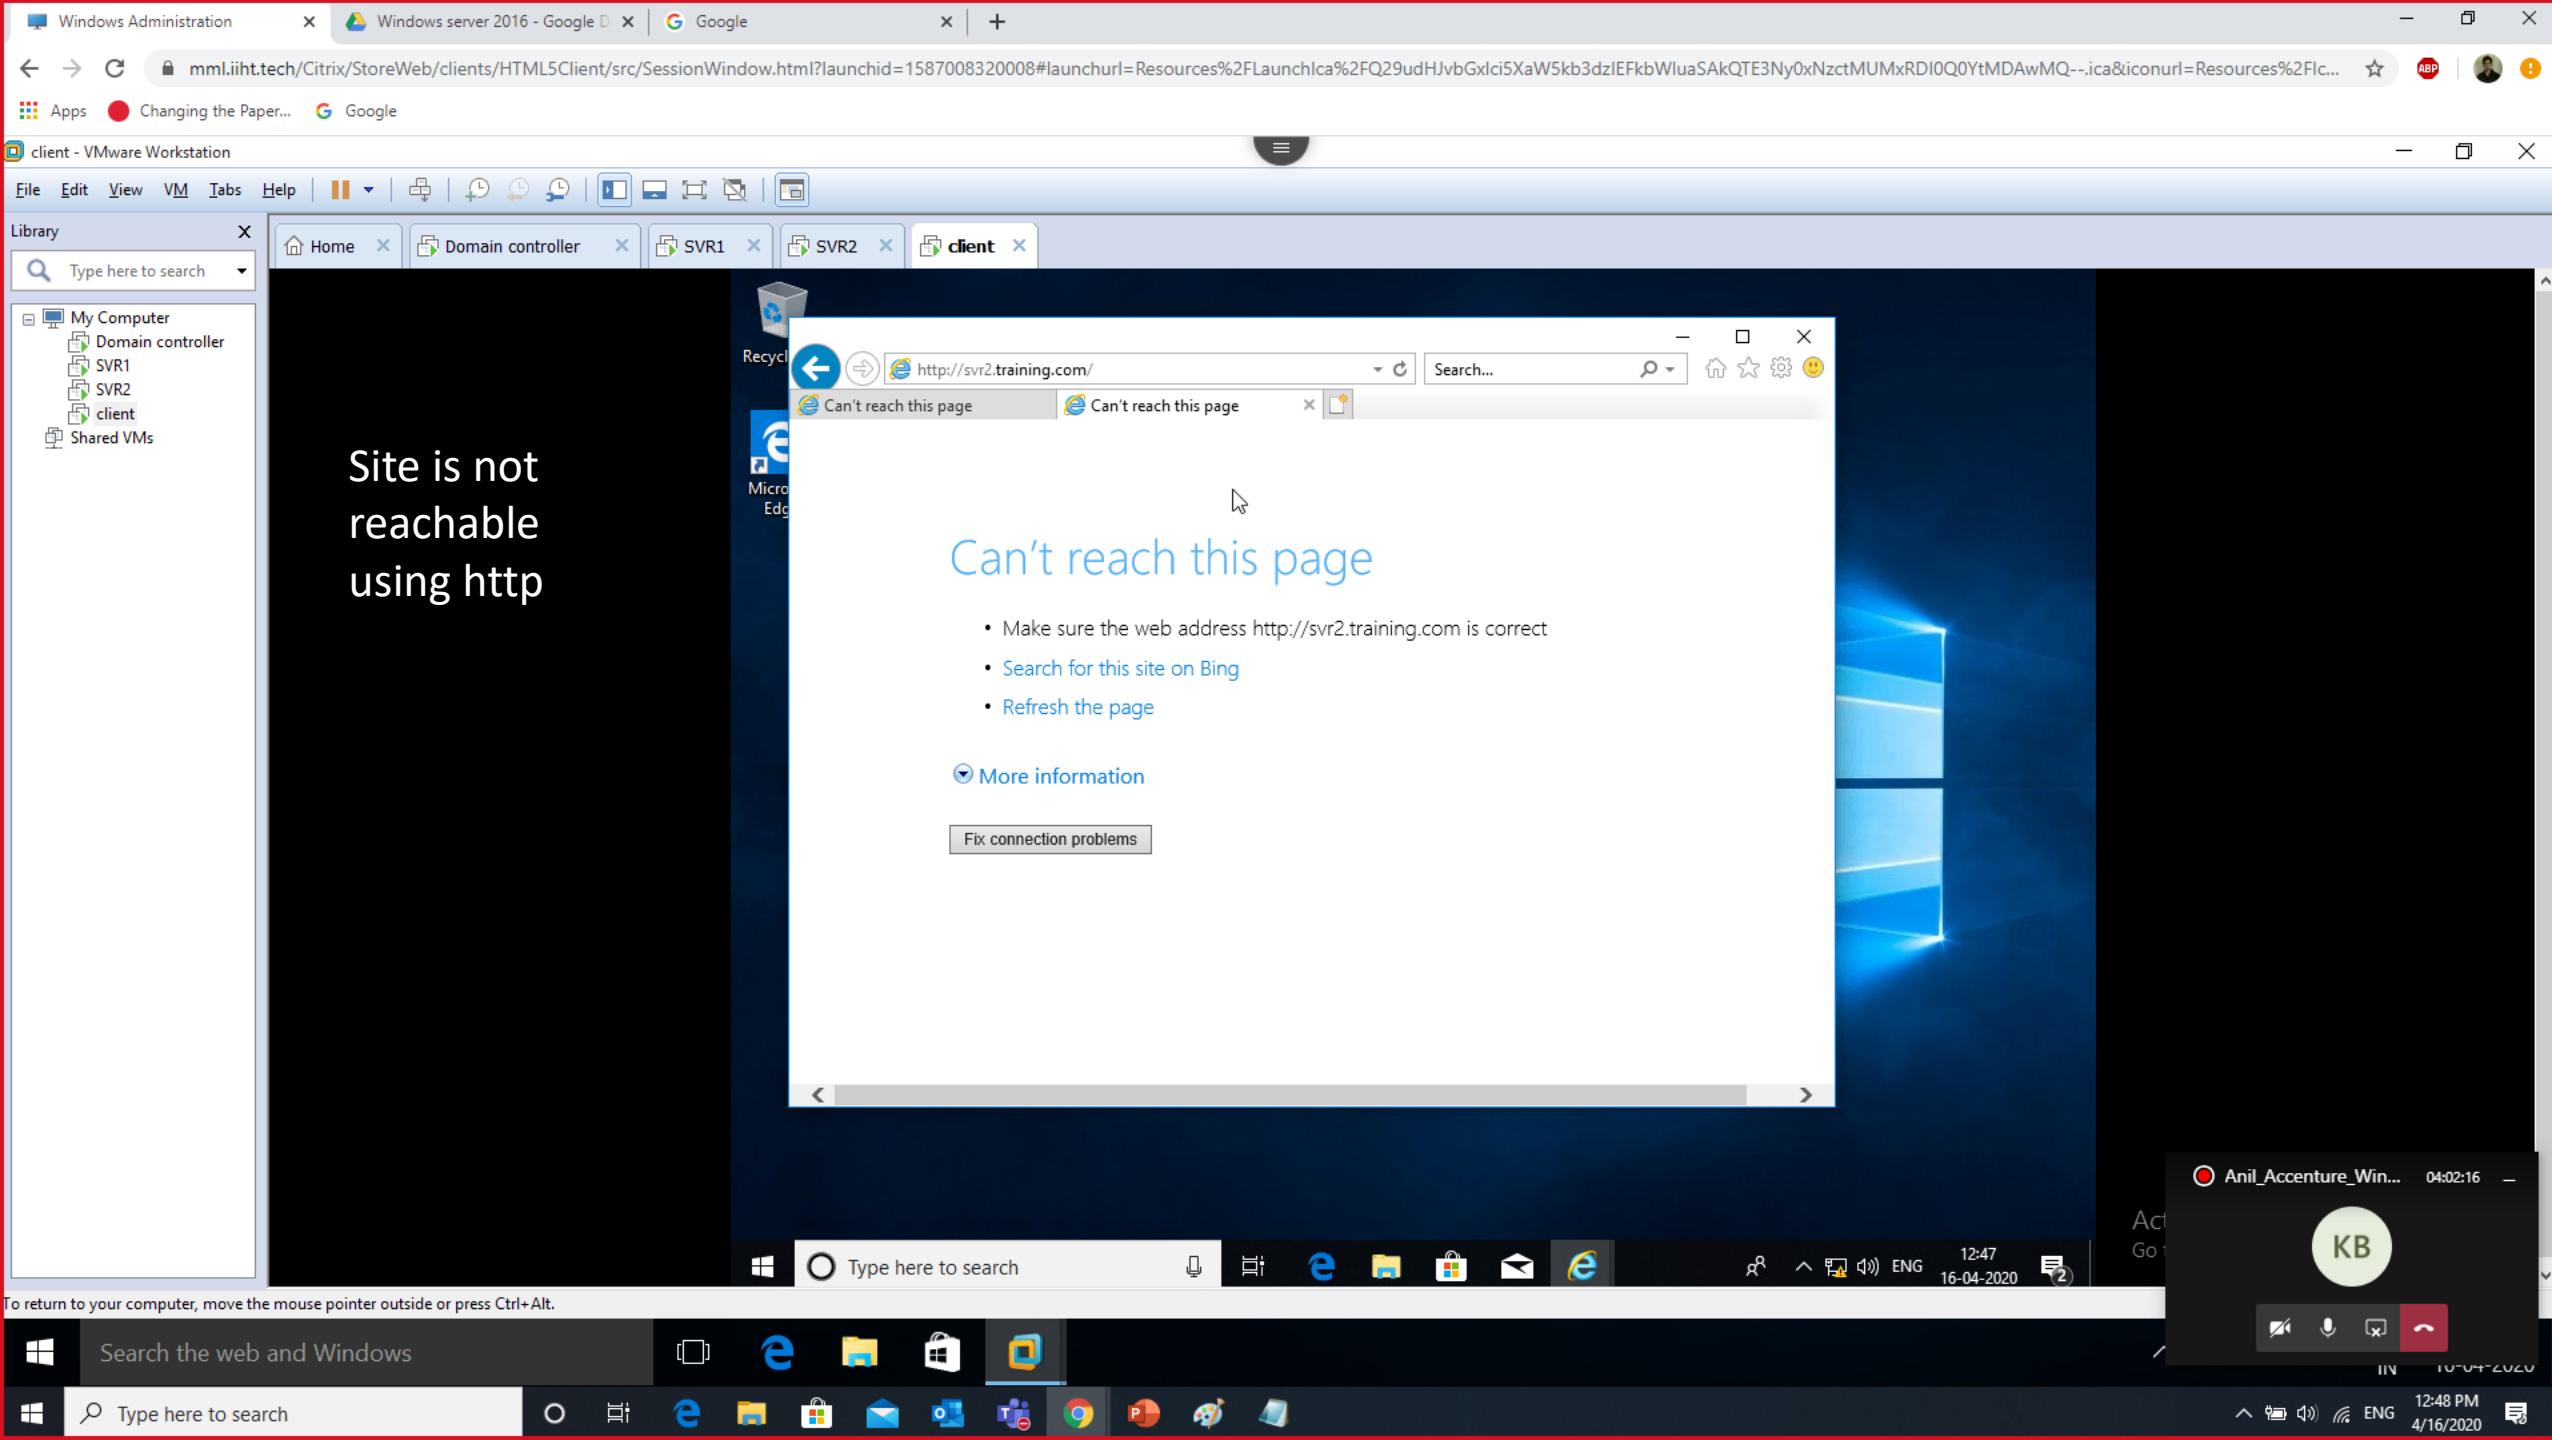

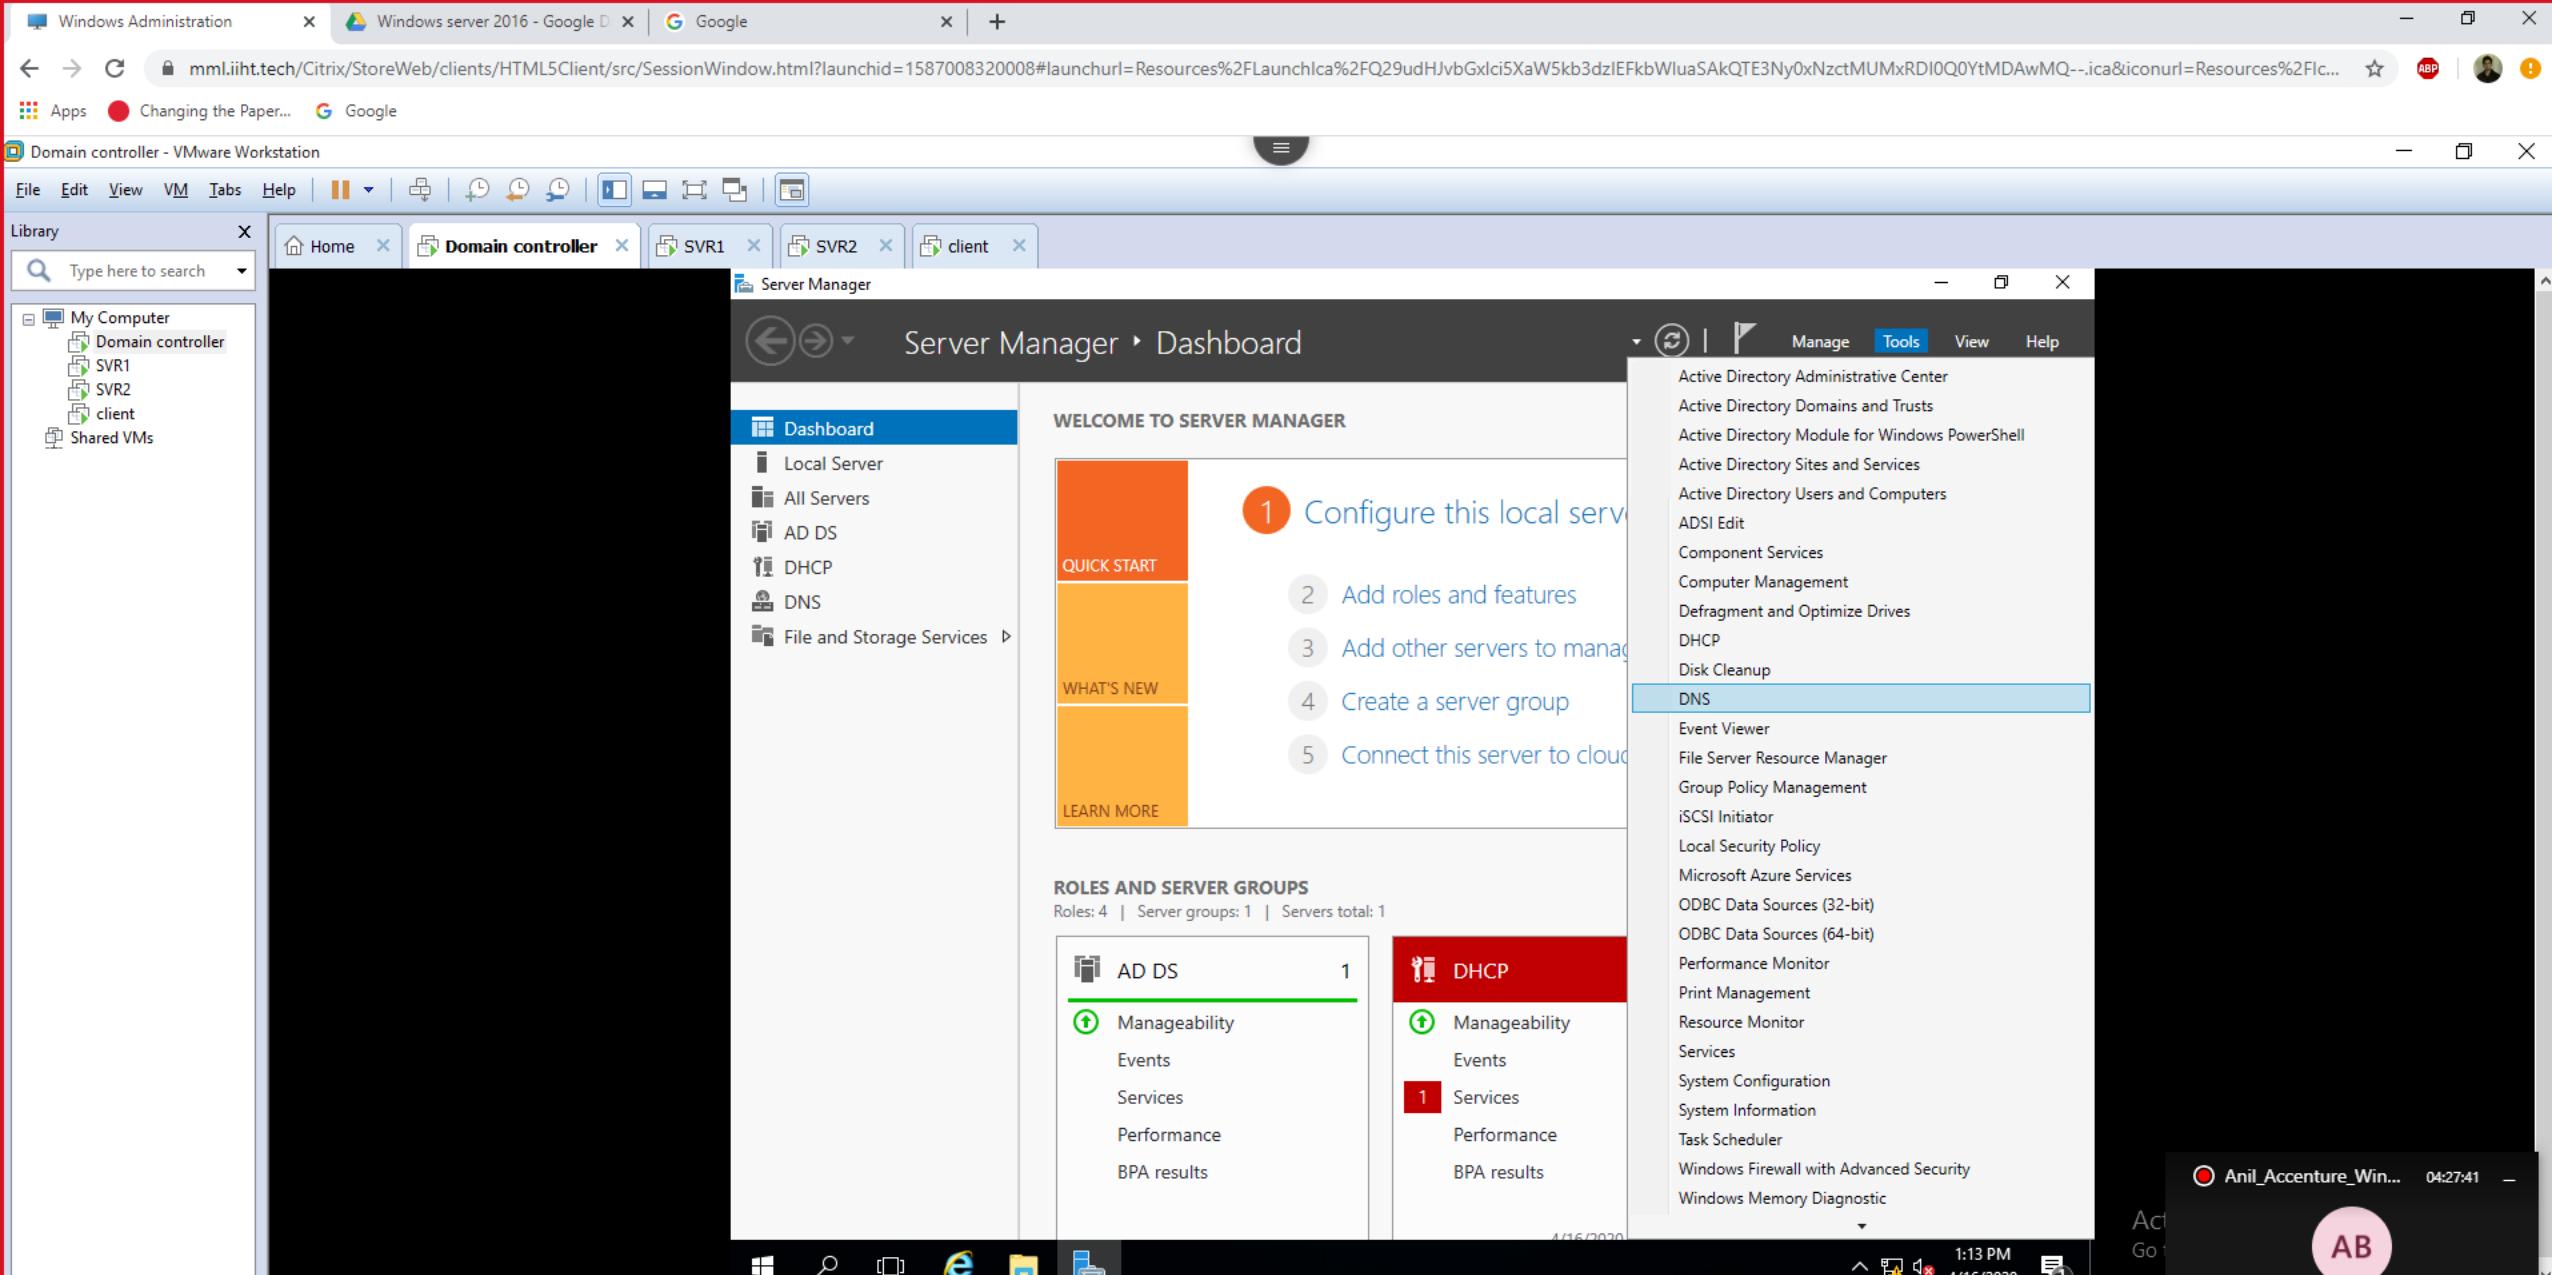

In the IIS manager , go to
bindings and
remove http
entry

To return to your computer, move the mouse pointer outside or press Ctrl+A
